ENEL STARTS CONSTRUCTION OF 300 MW RED DIRT WIND FARM IN UNITED STATES

- *Red Dirt will be able to generate approximately 1,200 GWh of renewable energy annually*
- *Overall investment in the construction of the wind farm amounts to approx. 420 million US dollars*
- *The energy and renewable energy credits from Red Dirt will be sold under long-term agreements with T-Mobile and the Grand River Dam Authority*

Rome, April 18th, 2017 — Enel S.p.A. ("Enel"), through its subsidiary Enel Green Power North America, Inc. ("EGPNA"), has started construction of the Red Dirt wind farm in the United States which, once completed, will have a total installed capacity of 300 MW.

The overall investment in the construction of Red Dirt amounts to approximately 420 million US dollars, which is part of the investment outlined in Enel's current strategic plan, and is financed through the Enel Group's own resources. The wind facility, which is owned by EGPNA subsidiary Red Dirt Wind Project, LLC, will be located in Kingfisher and Logan Counties, Oklahoma. Once completed, Red Dirt will be able to generate approximately 1,200 GWh of renewable energy annually – equivalent to the energy consumption needs of more than 97,000 U.S. households – while avoiding the emission of about 860,000 tonnes of CO₂ each year.

The energy and renewable energy credits from Red Dirt, which is expected to enter into service by the end of 2017, will be sold under two long-term agreements, one with T-Mobile US, Inc. (NASDAQ: TMUS) for 160 MW and the other with the Grand River Dam Authority for 140 MW of the wind facility.

Since EGPNA entered the Oklahoma wind market in 2012, the company has experienced a near ten-fold increase in capacity in the state, increasing its wind portfolio to now nearly 1,500 MW from 150 MW. EGPNA's other projects in Oklahoma include the 150 MW Rocky Ridge in Kiowa and Washita Counties, 300 MW Chisholm View I and II in Grant and Garfield Counties, 150 MW Origin in Murray, Carter, and Garvin Counties, 150 MW Osage Wind in Osage County, 200 MW Goodwell in Texas County, 74 MW Little Elk in Kiowa and Washita Counties, and 108 MW Drift Sand in Grady County.

EGPNA, part of the Renewable Energies division of the Enel Group, is a leading owner and operator of renewable energy plants in North America with plants operating and under development in 23 U.S. states and two Canadian provinces. EGPNA operates around 100 plants with a managed capacity exceeding 3.2 GW powered by renewable hydropower, wind, geothermal and solar energy.
