# 1. INTRODUCTION

This document describes the BCS API data layouts. It is to be used in conjunction with the BCS API Programmers Manual in order to have an overview of how to interface the BCS Clearing system using the BCS API libraries.

The following sections gather all the data layouts basing on the main clearing functionalities offered by the BCS Clearing system. Each chapter includes and describes all data layouts, each one related to a specific function class.

The names of the classes, whose data layouts are listed below, adopt the following naming convention:

`Inquire<ClassName>` is an inquire class that identifies the message structure to be used when invoking an Inquire function.

`Subscribe<ClassName>` is a subscription class that identifies the message structure to be used when invoking a Subscribe function.

`Submit<ClassName>` is a submit class that identifies the message structure to be used when invoking a Submit function.

`Notify<ClassName>` is a notify class that identifies the message structure to be used when invoking a call-back function to notify new data.

## 2. CHANGES FROM PREVIOUS VERSION

API Layout	Change description	Mandatory
NotifyContracts NotifyZipContracts NotifyContractsByTime NotifyZipContractsByTime NotifySubContracts	New values for "MarketSource" field.  Note: these values will be available with next derivatives trading system release	No (Optional)

# 3. BASIC CONVENTIONS

## 3.1 Field Types

The "Type" column includes the following formats:

Type
String
Float
Date
Time
Datetime
List

The List format is defined as follows:

- each value of the list is separated by the "|" character char (124)
- in case the value includes sub-values (i.e. positions list in SubmitCustomPortfolioParameters), each sub-values is separated by the "," character char (44)
- "|" and "," characters will be used only to separate values and subvalues, so they should not appear at the beginning and at the end of the list

Example of a list for the "PositionsList" field of the SubmitCustomPortfolioParameters layout:

```
95000,IT1837483929,*OMN,C|95000,IT1837483934,*OMN,P|03422,IT1834483929,*OMN,C;
```

## 3.2 Field Length and Order of Data

The "Length" column stands for the maximum length of the field. The length for Price fields reports the following format: xx.y (i.e. 17.2). This means that the field could be composed by maximum 17 digits for the integer part and maximum 2 digits for the decimal part.

The order of data (the couple key=value) is not relevant in the data flow so the user should not expect the data in the same order of the layout description.

### 3.3 Mandatory Fields

Each Inquire/Submit/Subscribe layout has mandatory and optional fields that are shown in the layout description as follows:

Field
Mandatory field
Optional field

### 3.4 Special Characters

Some fields cannot contain special characters. The "Description" column of the data layouts includes the following short indicators to correctly manage special characters:

- (°) - the field cannot include symbol ';' or '='
- (\*) - in sending or receiving, the symbols FS (0x1C) and RS (0x1E) replace respectively the punctuation ';' and '='.
- (^) - the field cannot contain lower-case characters

### 3.5 GCM Data Management

In some Inquire classes, a General Clearing Member can use the wildcard "\*ALL" in the ABICode field in order to download all the data belonging to itself and all its Non Clearing Members. Only a GCM can use the "\*ALL" value. A NCM or a direct member must use his own ABI code. It's possible to understand whether the user is a GCM using the InquireNonClearingMemberCodes. If more than one entry is returned in the NotifyNonClearingMemberCodes, the clearing member is a GCM.

## 4. ZIPPED API LAYOUTS

Some classes are available also in a zipped version in order to speed up transmission of large quantity of data. The layout of a zipped class does not change in respect to its normal version.

The following table lists all the available zipped classes:

Inquire API	Notify API
1.InquireZipClasses	NotifyZipClasses
2.InquireZipSeries	NotifyZipSeries
3.InquireZipPositions	NotifyZipPositions
4.InquireZipContracts	NotifyZipContracts
5.InquireZipContractsByTime	NotifyZipContractsByTime
6.InquireZipReportData	NotifyZipReportData

For a description of the unzip callbacks of the BCS API, please refer to the BCS API Programmers Manual.

**Please note**

The NotifyZipReportData function must not be used together with the GK\_UnzipBinaryData callback. Reports will be downloaded in zip format and should be unzipped using an external unzip library.

# 5. THROTTLING

In order not to overload the system with too many transactions, every API user has a frequency limitation on each layout. Every transaction sent to the BCS server which exceeds this limit will fail with the error "ExceedingMaxNumQueries!!".

This limitation is implemented at user level, so different API users of the same company have different frequency counters.

The timeslot for which the limitation is calculated is 600 seconds (10 minutes).

BCS layouts	Tx every timeslot
InquireAssignments	1
InquireClasses	1
InquireClearingMemberCodes	9
InquireClearingMessagesSent	1
InquireClientCodeContractChanges	1
InquireCollateralGuarantees	1
InquireContracts	12
InquireContractsByTime	3
InquireContractTransfers	2
InquireDepositedGuarantees	1
InquireEarlyExercises	1
InquireEmailNotifications	3
InquireExByEx	1
InquireExerciseAtExpiry	1
InquireGiveOutParameters	3
InquireIntradayMarginCallsSent	1

BCS layouts	Tx every timeslot
InquireMarkets	1
InquireNonClearingMemberCodes	9
InquireOpenCloseContractChanges	1
InquirePositions	6
InquirePositionTransfers	2
InquireRectifications	3
InquireRiskNotifications	3
InquireSplitContracts	3
InquireStandardNotifications	3
InquireSubAccountClientCodeLinkChange	1
InquireSubAccountClientCodeLinks	3
InquireSubAccountParameters	3
InquireSubAccountTransfers	1
InquireTakeUpParameters	3
InquireTradeHistory	1
InquireZipClasses	1
InquireZipContracts	12
InquireZipContractsByTime	3
InquireZipPositions	6
InquireZipSeries	1

Timeslot = 600 sec.

This means that every member can send up to 6 InquireZipPositions every 600 seconds, no matter of the parameters specified in the query. The reject of the query does not affect the count.

# 6. SUBSCRIPTIONS MANAGEMENT

Subscription classes allow subscription for a specific clearing event in order to automatically receive an update as soon as a new event is generated (i.e. new trade reception), without having to inquire the system periodically to get new data. The BCS Clearing System will notify to the user any data generated after the subscription is sent. A GCM will automatically receive data of its NCMs.

For instance, after having sent a "SubscribeContracts" to the system, the user will start receiving a "NotifySubContracts" message for each trade update (i.e. new trade generation, trade cancellation, ...) for itself and its NCMs (if any).

In order to unsubscribe a specific event, the "GK\_UnSubscribe" callback should be used (see BCS API Programmers Manual), specifying the right "SubscriptionId" parameter..

## 6.1 Data Re-alignment

As soon as the user connects to the system, it should send a "Subscribe" to get all the updates on a specific clearing event from that moment onward. Then, an "Inquire" on the same clearing event should be sent in order to get all the information previously generated by the BCS Clearing system on that event (i.e. the user should first send a "SubscribeContracts" to get new trade updates and then an "InquireContracts" to get the current snapshot of the trades). In this phase, duplicates could be received by the user. These duplicates should be discarded through keys. Keys are defined for layouts that present both a "Notify" and a "NotifySub", since for these layouts both an "Inquire" and a "Subscription" should be executed.

In order to correctly manage the re-alignment of data during this phase, in case two records with the same key are received, the newest overwrites the oldest; **data received through Subscribes are considered always newer than data received through Inquires**, so in case a record with the same key is received from a Subscribe and from an Inquire, the one received from the Inquire should be discarded.

Since temporal order in sending messages is guaranteed by "Subscriptions", data downloaded through "Inquires" could not follow a predefined order.

Keys are reported at the top of the related paragraphs in the following chapters.

## 6.2 Intraday Updates

When an intraday update for a record already received is sent from the BCS Clearing system to the user, the key should be used to correctly manage the update. When a new record is received from the system, the user should verify whether a record with the same key has already been received:

- in case a record with the same key is present in the list, the new record should overwrite the existing one;
- in case no record with the same key is present in the list, the new record should be appended to the list;

Keys allow also to delete a record if no more useful. This happens only for the "NotifySubContracts" event; in this case a "NotifySubContracts" with ContractState = R (Reversing) is received. Two are the possible scenarios:

- *Split Contracts* - in this case the message with ContractState = R means that the related record (previously received) should be removed by the trades list;
- *Contract Transfer* - in this case the message with ContractState = R is sent as a consequence of a trade transfer confirmed by the receiver. The related record with the same key (previously received) should be removed from the trades list.

# 7. DR INVOCATION

In case of Disaster Recovery invocation, two different scenarios could take place: the full site DR invocation (including SOLA trading platform and all the related downstreams) or the DR of the BCS System only.

## 7.1 BCS Disaster Recovery

In case of Disaster Recovery invocation of the BCS Clearing system only, clients have to ensure to be connected to the Secondary Data Centre (SDC) site, managing the data re-alignment as a normal reconnection to the system (as described in section 6.1)

## 7.2 SOLA Full Site Disaster Recovery

In case of SOLA Trading Platform Full Site DR Invocation, the following procedure will be applied - for both BCS GUI and API applications:

- Clients of the BCS clearing services have to ensure to be connected to the Secondary Data Centre (SDC) site.
- Once successfully connected in SDC, clients should manage the data re-alignment as per a normal BCS DR invocation, with the exception of the trades. For this purpose, an InquireContracts should be sent to the BCS Clearing system. The following trades will be notified through a NotifyContracts:
  - Trades on derivative instruments, having the original Contract Number of the trade executed in PDC (Primary Data Centre). These trades should be discarded by clients
  - Trades on derivative instruments executed in PDC, with a ContractNumber starting from an offset value (500,000). Any split trade will maintain the original contract number. Both the MarketContractNumber and the OrderNumber values, related to trades executed in PDC, will remain unchanged
  - Trades on derivative instruments executed in SDC (if any), having the ContractNumber field restarting from the first value disseminated in PDC. An offset to the MarketContractNumber and OrderNumber values of the trades executed in SDC will be applied. The offset will be different from the one applied to the ContractNumber value for trades executed in PDC
  - Trades on cash instruments executed before and after the restart of the system (no offset applied).

# 8. MARKETS

## 8.1 InquireMarkets

This layout allows to download the list of available markets. Data is returned in the NotifyMarkets.

<b>Field</b>	<b>Type</b>	<b>Length</b>	<b>Description</b>
GKMarket	string	100	Identifies the Clearing System where request has to be sent. GKMarket = CCG (Cassa di Compensazione e Garanzia)

## 8.2 NotifyMarkets

This layout returns the list of available markets.

<b>Field</b>	<b>Type</b>	<b>Length</b>	<b>Description</b>
MarketId	string	2	Market identification code
MarketAcronym	string	3	Market acronym
MarketCodeAlfa	string	1	Alphanumeric market code
Description	string	40	Description

# 9. CLASSES

## 9.1 InquireClasses (or InquireZipClasses)

This layout allows to download the list of available classes. Data is returned in the NotifyClasses (NotifyZipClasses).

<b>Field</b>	<b>Type</b>	<b>Length</b>	<b>Description</b>
GKMarket	string	100	Identifies the Clearing System where request has to be sent. GKMarket = CCG (Cassa di Compensazione e Garanzia)

## 9.2 NotifyClasses (or NotifyZipClasses)

This layout returns the list of available classes. In NotifyZipClasses records are separated by \n; the last records ends with \n.

<b>Field</b>	<b>Type</b>	<b>Length</b>	<b>Description</b>
Symbol	string	6	Class symbol
ProductType	string	1	Product type (F=Future, O = Option, V=Convertible  W=Warrant  C=Equity, ETC, ETF)
ProductGroup	string	3	Product group
Description	string	35	Description
MarketId	string	2	Market identification code

<b>Field</b>	<b>Type</b>	<b>Length</b>	<b>Description</b>
ISINCode	string	12	The underlying ISIN code which uniquely identifies a specific securities issue (International Securities Identification Number)
UnderlyingId	string	6	Underlying symbol
MinMargin	float	7.8	Minimum margin
MarginInterval	float	3.2	Margin interval
SettlementType	string	3	Settlement type ( ST=settled, CSH= cash settlement, FUT = future style)
ContractSize	float	7.8	Number of Underlying entities per contract
OptionType	string	1	Option type (B=bond, E = equity, I = Index)
OptionStyle	string	1	Option Style (A = American, E = European)
SettlementDays	integer	2	Days between expiry and settlement date
SubType	string	1	SubType (N=Normal, W=Weekly, M=Monthly, Q=Quarterly, Y=Yearly, D=Delivery)

## 9.3 SubscribeClasses

This layout allows to subscribe for new classes events. Data is returned in the NotifySubClasses.

<b>Field</b>	<b>Type</b>	<b>Length</b>	<b>Description</b>
GKMarket	string	100	Identifies the Clearing System where request has to be sent. GKMarket = CCG (Cassa di Compensazione e Garanzia)

## 9.4 NotifySubClasses

Unique key for a Class message is: <symbol, product type>. This layout returns new classes events.

<b>Field</b>	<b>Type</b>	<b>Length</b>	<b>Description</b>
Symbol	String	6	Class symbol
ProductType	String	1	Product type (F=Future, O = Option, V=Convertible  W=Warrant  C=Equity, ETC, ETF)
ProductGroup	String	3	Product group
Description	String	35	Description
MarketId	String	2	Market identification code
ISINCode	String	12	The underlying ISIN code which uniquely identifies a specific securities issue

<b>Field</b>	<b>Type</b>	<b>Length</b>	<b>Description</b>
			(International Securities Identification Number)
UnderlyingId	String	6	Underlying symbol
MinMargin	Float	7.8	Minimum margin
MarginInterval	Float	3.2	Margin interval

# 23. APPENDIX A – REPORT MANAGEMENT AND INFO TYPE VALUES

The BCS system allows the download of the following report types:

- • Clearing reports
- • Risk file (Closing Prices, Theoretical values and Class files)
- • Order and Trade history files

To download a specific report, the `InquireZipReportData` layout must be used, specifying the corresponding info type and file type. To obtain the list of the available reports, with all the available info types and file types is possible to use the `InquireReportSent` query.

Some changes can be applied to this list, since clearing reports are produced directly by CC&G.

For this reason, for any update about the list of allowed clearing reports, customers can refer to CC&G clients-services department.

The `NotifyZipReportData` layout must not be used with the `GK_UnzipBinaryData`; to unzip the downloaded report an external zip library should be used.

Please, notice that the Risk file has to be unzipped two times to obtain the contained risk files
