## 1.0 Introduction

This section introduces the BCS GUI application main features and provides with basic information aimed at its correct use.

### 1.1 About BCS

BCS is a GUI application allowing a clearing member to execute clearing operations on Derivatives products. It allows also inquiries and risk management functionalities on Bonds and Equities products.

The application allows to:

- Receive trades executed by members in real time and their own non-clearing members in the current trade date and in the last trading days
- Perform transfer, split, open/close and client code change operations
- View the history of a specified trade
- Receive positions in real time and perform rectify, transfers, subaccount change and exercise operations
- Manage exercise and assignments operations
- Manage expiry operations
- Access a set of Post Trade Risk Management functionalities on Positions, Trades and Margins
- Manage subaccounts
- Download clearing reference data
- Receive intraday margin calls and messages from the clearing system
- View deposited guarantees

---

# User Guide

August 2020

- Retrieve and save settlement reports provided by the clearing system
- Receive notifications on clearing activities via mail

## 1.2 Work environment

BCS is based on a client-server architecture: the server layer is located at one of the group server farms and connected to the Clearing system and markets through their network access points. On the other hand, the client layer should be installed on the clearing members' work environment.

BCS GUI is the comprehensive solution for all clearing functionalities. The electronic platform supporting the client application is structured to make its access independent from the technical frame features of central systems.

## 1.3 How to get started

In order to access to the clearing services through BCS, the user needs a login name, a password and a Member Code. These data have to be requested to Borsa Italiana.

BCS GUI can be downloaded from the Borsa Italiana website ([www.borsaitaliana.it](http://www.borsaitaliana.it)) and installed on one or more members' PCs. The BCS GUI needs Java Virtual Machine V.1.6 or higher. A compatible version of the JVM will be installed during the setup process of the BCS GUI.

The client can be used to reach production (PDC/SDC) or test environment (CDS). By default the Client will point to the production environment. The user can select the desired environment at the startup in the login window.

Before starting the application, is warmly suggested to the user to uninstall any previous version of the BCS GUI and to test the connectivity from the local desk to the BCS application servers. This involves the following steps:

- close the BCS GUI if running;
- verify with the customer network department if a natted IP address is used to reach the BCS application servers instead of the real addresses

If the real IP address is used:

- go into the BCS GUI installation directory (usually C:\Program Files\Borsa Italiana\BCS Client XXX) and locate the GKApi\_J\_Version.xml" file in the "etc\Server" directory.
- verify that the file contains the real IP addresses of the BCS application servers; the IP address should be specified in the "TCP\_IP" tag of each application server

---

# User Guide

August 2020

```
<SERVER name="BCSPRODUCTIONSERVER">  
  
  <TCP_IP>Insert here</TCP_IP>  
  
  <TCP_PORT>34900</TCP_PORT>  
  
  <KEEPALIVE_TIMEOUT>20</KEEPALIVE_TIMEOUT>  
  
  <TRANSPORT_BUFFER>1024</TRANSPORT_BUFFER>  
  
  <APPLICATION_WINDOW_SIZE>20000</APPLICATION_WINDOW_SIZE>  
  
  <TRACE_LEVEL>ERR</TRACE_LEVEL>  
  
  <TRANSACTION_BUFFER_SIZE>2000</TRANSACTION_BUFFER_SIZE>  
  
  <SUBSCRIPTION_BUFFER_SIZE>2000</SUBSCRIPTION_BUFFER_SIZE>  
  
  <INQUIRE_BUFFER_SIZE>2000</INQUIRE_BUFFER_SIZE>  
  
  <TCP_BUFFER_SIZE>10240</TCP_BUFFER_SIZE>  
  
</SERVER>
```

- telnet the BCS application server IP addresses and ports from the user local PC;
- if the telnet does not work, please verify with the customer network department if the telnet attempt is filtered by any internal firewall;

#### **If a natted IP address is used:**

- go into the BCS GUI installation directory (usually C:\Program Files\Borsa Italiana\BCS Client XXX\) and locate the GKApi\_J\_Version.xml" file in the "etc\Server" directory;

---

# User Guide

August 2020

- change the file replacing the real IP addresses with the natted ones; the IP address should be specified in the "TCP\_IP" tag of each application server

```
<SERVER name="BCSPRODUCTIONSERVER">  
  
  <TCP_IP>Insert here</TCP_IP>  
  
  <TCP_PORT>34900</TCP_PORT>  
  
  <KEEPALIVE_TIMEOUT>20</KEEPALIVE_TIMEOUT>  
  
  <TRANSPORT_BUFFER>1024</TRANSPORT_BUFFER>  
  
  <APPLICATION_WINDOW_SIZE>20000</APPLICATION_WINDOW_SIZE>  
  
  <TRACE_LEVEL>ERR</TRACE_LEVEL>  
  
  <TRANSACTION_BUFFER_SIZE>2000</TRANSACTION_BUFFER_SIZE>  
  
  <SUBSCRIPTION_BUFFER_SIZE>2000</SUBSCRIPTION_BUFFER_SIZE>  
  
  <INQUIRE_BUFFER_SIZE>2000</INQUIRE_BUFFER_SIZE>  
  
  <TCP_BUFFER_SIZE>10240</TCP_BUFFER_SIZE>  
  
</SERVER>
```

- save the file
- telnet the natted IP addresses and ports from the user local PC;
- if the telnet does not work, please verify with the customer network department if the telnet attempt is filtered by any internal firewall;

Please notice: the user is not allowed to put chars ';' and '=' in free fields; otherwise an error message will be shown on the GUI.

---

# User Guide

August 2020

## 1.4 Disaster Recovery Invocation

In case of Disaster Recovery invocation, in order to correctly reach the SDC application servers, the user should restart the BCS GUI and select "SDC" in the environment field of the login window.

## 1.5 Clearing calendar

The CommonApplication.config configuration file, in the \etc\client directory, allows the user to define bank holidays rules for the current year.

An example of the holiday configuration file is shown hereafter:

```
HOLIDAYS=*SUNDAY;*SATURDAY;01/01;$EASTER;$EASTER+1;$EASTER-1;$EASTER-2;01/05;15/08;$CHRISTMAS;$CHRISTMAS+1;$CHRISTMAS-1;31/12
```

Where:

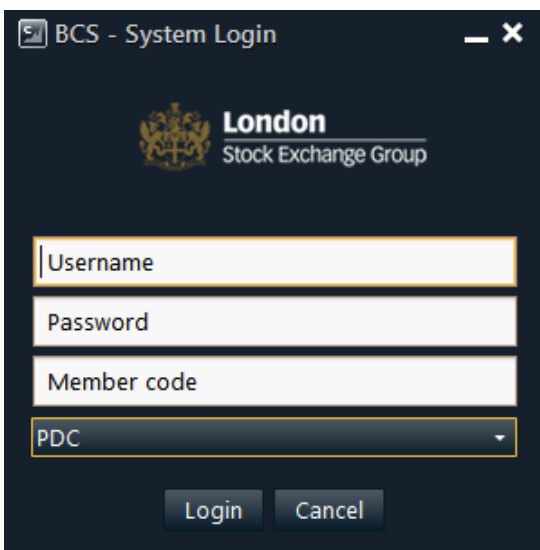

- “;” = Field separator character
- \*SUNDAY = every Sunday of the year
- \*SATURDAY = every Saturday of the year
- \$EASTER = Easter date
- \$CHRISTMAS = Christmas date
- \$EASTER +/- n° = Easter + or – specific number of days
- \$CHRISTMAS +/- n° = Christmas + or – specific number of days
- dd/mm = specific date of the year

---

# User Guide

August 2020

## 1.6 Login

The screenshot shows a dark-themed login window titled "BCS - System Login". At the top left is the London Stock Exchange Group logo and the text "London Stock Exchange Group". Below this are four input fields: "Username", "Password", "Member code", and a dropdown menu currently showing "PDC". At the bottom of the window are two buttons: "Login" and "Cancel".

In order to access the BCS clearing system, the login procedure should be correctly completed by the user. Username, Password and Member Code should be specified in the corresponding fields of the login window. The user should specify the environment he would like to login before clicking the Login button.

PDC: Production environment

CDS: Test environment

At the first login the password change is required.

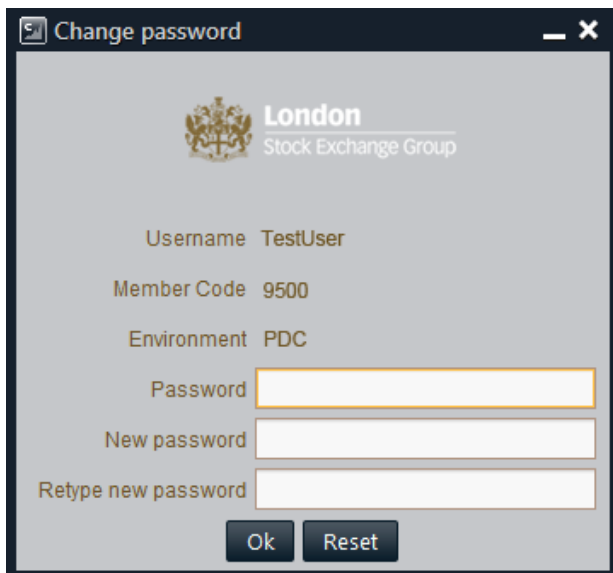

---

# User Guide

August 2020

## 1.7 Change Password

It's possible to change the password clicking on *Change Password* in the File menu. The following window will be shown.

The screenshot shows a window titled "Change password" with a close button (X) in the top right corner. The window has a light gray background and contains the following elements:

- Logo of the London Stock Exchange Group (a crown) and the text "London Stock Exchange Group".
- Fields for "Username" (TestUser), "Member Code" (9500), and "Environment" (PDC).
- Fields for "Password", "New password", and "Retype new password".
- Buttons for "Ok" and "Reset" at the bottom.

The following steps should be performed:

1. Insert the current password in the *Password* field;
2. Insert the new password in the *New Password* and in the *Retype new password* fields;
3. Press the *OK* button to confirm.

A confirmation message will be shown informing that the transaction has been correctly sent.

## 2.0 Application layout

This section will go through the BCS GUI layout, including the description of the work environment and the basic functions for the data management.

### 2.1 Main Menu

After the user has been authenticated, the BCS Main Menu will be shown on the screen. The Windows bar on the upper side of the Main Menu shows the username and the environment the user is connected to. The Main Menu is made up of two sections: Menu Bar and Active Windows Bar.

### Menu Bar

The Menu Bar contains the following menus and commands:

#### File

---

Menu	Description
Login	Shows the login prompt
Settings	Allows to access the main settings of the BCS application
Save Environment	Saves the windows configuration
Change Password	Changes the current password
Exit	Performs the logout

---

# User Guide

August 2020

## Archives

Menu	Description
Markets	List of the available markets
Classes	List of the classes
Tradable Series	List of the tradable series
Participants	Clearing members list
Non-Clearing members	List of own non-clearing members (for GCM only)
Sub Accounts	Configuration/management of secondary accounts for every clearing member
Automatic Give-up	Configuration/management of client codes for automatic give-up functionality

## Positions

Menu	Description
Positions	Allows to manage positions registered in the clearing system. It is possible to see the list of open positions and access the functions of Rectification, Transfer, Subaccount Change and Early Exercise. It's also possible to add positions to Custom Portfolios for Risk Management activities
Massive Upload	Allows to upload an xls, csv, or xml file including a list of clearing operations to be massively executed in the clearing system.

## Trades

Menu	Description
Trades	Allows to manage executed trades registered in the clearing system. It is possible to see the list of trades, the history of a single trade and access the functions of International Give-Up, Trade Transfer, Split, Open/Close Change and Client Code

---

Menu	Description
Report	List of available clearing reports

## Tools

---

Menu	Description
Monitor	Shows the main activities of the clearing member (and its NCM's) in real time
Intraday Margin Calls	Intraday margins requested by CC&G
Stop Button	Allows to suspend or re-activate NCMs on the SOLA Trading System
Notifications	To receive notifications via email on the clearing activities

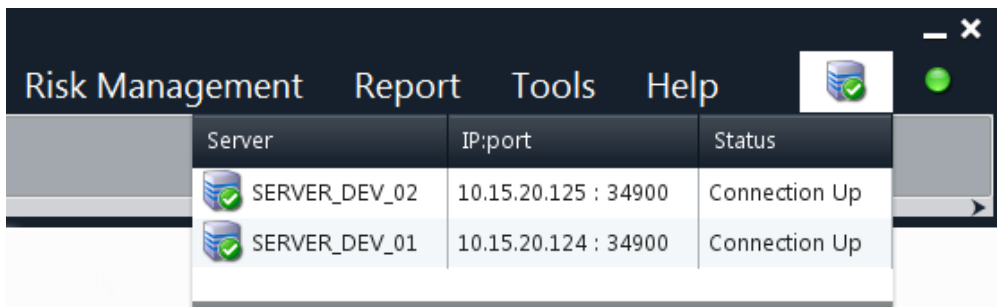

The menu bar also contains two status lights:

1. BCS Server Connection Status

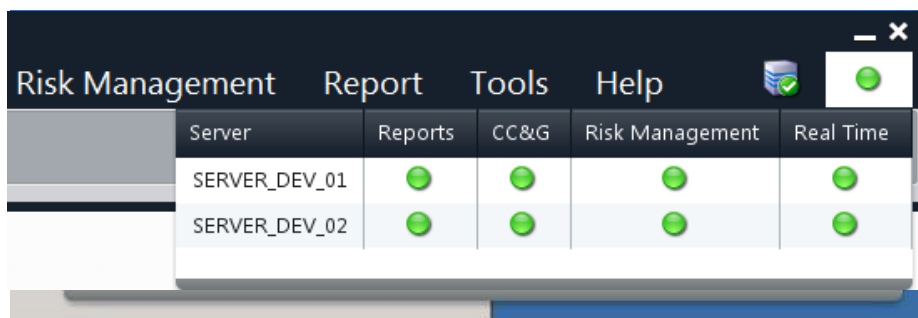

# User Guide

August 2020

It shows the connection status of the BCS GUI to the BCS application servers (green/red)

## 2. BCS Server Components Status

It shows the status of the BCS server components (green/red).

- If the Reports component is not available (red), clearing reports file could not be downloaded; any update about the reports availability will not be sent to the user. Any other clearing function will be available;
- If the CC&G component is partially unavailable (yellow), it will not be possible to submit transactions to the clearing system; historical data could not be downloaded; the trade history function will not be available;

If the CC&G component is totally unavailable (red), it will not be possible to submit transactions to the clearing system; real time updates will not be available; historical data could not be downloaded; the trade history function will not be available; clearing reports will be available;

- If the Risk Management component is not available (red), it will not be possible to receive alarms and margin values updates and it will not be possible to change the limit and portfolios definition. Any other clearing function will be available;
- If the Real Time component is not available, it will be possible to send submit transactions to the clearing system, anyway data shown in the GUI may not be updated;

---

# User Guide

August 2020

- If the Stop Button component is totally unavailable (red), the connection with SOLA trading system is down so it will not be possible to change the NCM's trading status; any other operation that is not associated with Stop Button will be available;

## Active Windows Bar

This bar shows a button for every active window of the GUI. Clicking on a button will open the corresponding window.

## 2.2 Windows layout

This section describes the layout of the BCS windows and the basic functions which can be executed in order to manage, sort, filter and export data.

### Toolbar

The main windows of the BCS GUI have a toolbar on the top which contains a basic set of functions.

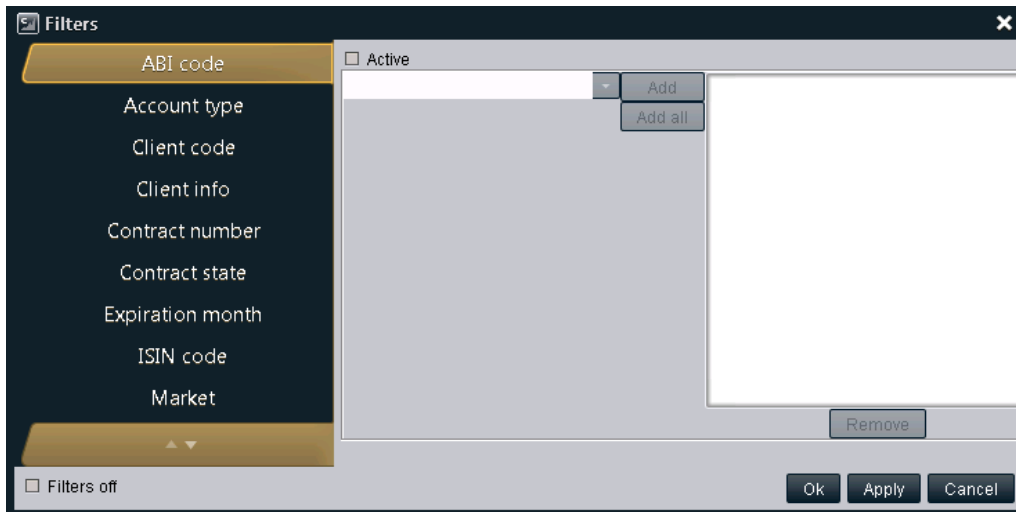

The *Filter* button allows to enable a set of background filters on the displayed data. Where allowed, regular expressions can be used (See Appendix A: Regular Expressions).

---

# User Guide

August 2020

The *Select All* button allows to select all the rows of the table.

The *Save* button allows to export the content of the table into a Microsoft Excel file or to an ASCII/PDF file.

The *Customize* button allows to select which columns to show in the table and in which order. It's possible to select which columns have to be shown in the fixed part of the table moving them over the red slider.

# User Guide

August 2020

The *Autofit* button allows to automatically resize the columns width in order to fully show the data contained in the cells of the table.

The *Foreground* button allows to select the foreground color of the rows of the table

The *Background* button allows to select the foreground color of the rows of the table

The *Font* button allows to select the font of the data displayed in the table

The *Print* button allows to print the data of the table. Only data shown on the screen is printed: hidden columns, if any, or filtered data will not be printed.

---

# User Guide

August 2020

The *Print Preview* button allows to have a preview of the data before it will be printed

## Business Date Bar

A Business Date Bar is present in the windows of the BCS GUI where previous days data are available. By default, the current business day is selected. In order to download data from a specific business date, the user should click on the “+” button next to the current business day tab and select the date of interest (up to T+5). A new tab will be shown in the bar, allowing to download data of the selected business date and to access the other clearing functionalities. It’s possible to switch between any active tab of the Business Date Bar in any time. Any tab will be automatically updated in case of a change on the displayed data, even if the tab is active in background.

# User Guide

August 2020

## Table functions

It's possible to access a basic set of functions for the data management right clicking on the table header of every BCS window.

The *Sort By Ascending* button allows to sort the data of the column in ascending order.

The *Sort By Descending* button allows to sort the data of the column in descending order.

The *Remove All Sorts* button allows to remove any sort previously defined on any column of the table.

The *Quick Filter* button allows to filter the rows of the table basing on a value of the selected column.

---

# User Guide

August 2020

The *Remove All Quick Filters* button allows to remove any filter previously defined on any column of the table.

The *Remove Current Quick Filter* button allows to remove a filter previously defined on the selected column of the table.

The *Columns* button allows to access a submenu with the following functions: *Hide Column*, *Customize*, *Autofit Column* and *Autofit All*.

The *Colors* button allows to access a submenu with the following functions: *Background* and *Foreground*

The *Font* button allows to select the font of the data displayed in the table

The *Select* button allows to select all the rows of the table basing on a value of the selected column

The *Export to Excel* button allows to export the content of the table into a Microsoft Excel file.

The *Print* button allows to print the data of the table. Only data shown on the screen is printed: hidden columns, if any, or filtered data will not be printed.

The *Print Preview* button allows to have a preview of the data before it will be printed

## 2.3 Saving and closing windows

The *Save Environment* function, in the *File* menu of the *Main Menu*, allows to save the windows current configuration (i.e. filters, characters, colors, sort criteria, etc...).

The configuration is saved before closing and exiting the BCS client.

---

# User Guide

August 2020

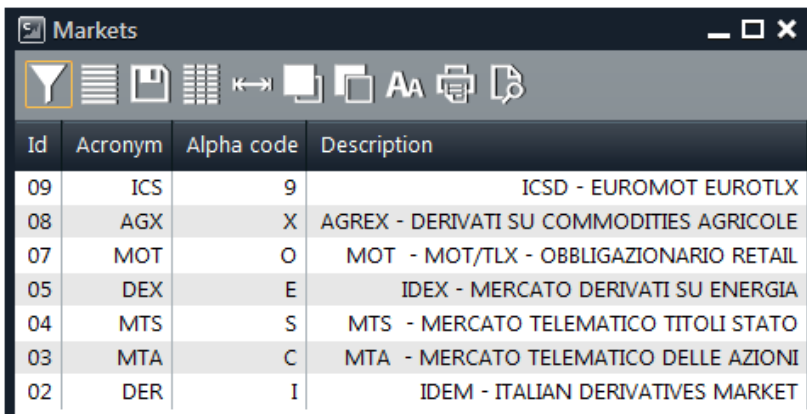

---

## 3.0 Archives

This menu allows users to access clearing reference data like available markets, product classes, tradable series and clearing members. It allows also to manage sub accounts and automatic give-up codes.

### 3.1 Markets

The Markets window shows the information concerning the markets to which the member belongs to.

The screenshot shows a window titled "Markets" with a toolbar containing icons for filter, list, save, grid, refresh, copy, font size, print, and help. Below the toolbar is a table with the following data:

Id	Acronym	Alpha code	Description
09	ICS	9	ICSD - EUROMOT EUROTLX
08	AGX	X	AGREX - DERIVATI SU COMMODITIES AGRICOLE
07	MOT	O	MOT - MOT/TLX - OBBLIGAZIONARIO RETAIL
05	DEX	E	IDEX - MERCATO DERIVATI SU ENERGIA
04	MTS	S	MTS - MERCATO TELEMATICO TITOLI STATO
03	MTA	C	MTA - MERCATO TELEMATICO DELLE AZIONI
02	DER	I	IDEM - ITALIAN DERIVATIVES MARKET

# User Guide

August 2020

Table columns description:

Id	Market identification code
Acronym	Market identification name
Alpha code	Market alphanumeric code
Description	Market description

## 3.2 Classes

The Classes window shows the list of the classes of the markets to which the member belongs to. A class is a group of derivatives instruments, options or futures, with the same underlying.

### 3.6 SubAccounts

The Subaccounts window allows to show and manage the list of subaccounts of the member and its NCMs.

#### SubAccount List

This window lists all the subaccounts of the Clearing Member. For General Clearing Members, also Non-Clearing Members subaccounts are shown. New subaccounts are automatically shown as soon as they are managed by the clearing system, without having to manually refresh the window. At the same way, any update on a subaccount is automatically shown.

The screenshot shows a software window titled "Sub Accounts" with three tabs: "Sub Account List", "Client Code Links", and "Client Code Link Changes". The "Sub Account List" tab is active, displaying a table of subaccounts. The table has the following columns: Market, Account type, Sub account, Activation date, Sub account status, Creation date, Market maker flag, and Liquidity provider flag. The data is as follows:

Market	Account type	Sub account	Activation date	Sub account status	Creation date	Market maker flag	Liquidity provider flag
DER	C	0183	12/30/14	Active	12/29/14	No	No

# User Guide

August 2020

Add New Subaccount. This function allows to create a new subaccount.

The screenshot shows a dialog window titled "Add New Sub Account". It contains the following fields and controls:

- Market: A dropdown menu showing "IDEM - ITALIAN DERIVATIVES MARKET".
- Member code: A dropdown menu showing "92004".
- Account type: Radio buttons for "H" (selected) and "C".
- Sub account: An empty text input field.
- Activation date: A date picker showing "Thu 01/22/2015".
- Keep net position: Radio buttons for "Y" (selected) and "N".
- Net margin: Radio buttons for "Y" (selected) and "N".
- Buttons: "Insert" and "Cancel".

The user is required to specify the new sub account details in the dialog window.

The following fields have to be selected: *Market*, *Member Code*, *Account Type* (House/Client), *Sub Account* name (only upper-case characters and numbers are allowed), *Activation Date*, *Keep Net Position* and *Net Margin*.

Modify: In order to modify an existing subaccount, the user has to right click on a specified subaccount in the SubAccount List window and select *Modify*. Only some parameters can be changed: Keep net position, Net margin, Activation date and Inactivation date.

The screenshot shows a dialog window titled "Modify sub account parameters". It contains the following fields and controls:

- Market: A dropdown menu showing "IDEM - ITALIAN DERIVATIVES MARKET".
- Member code: A text input field showing "03069".
- Account type: A dropdown menu showing "Client".
- Sub account: A text input field showing "\*OMN".
- Keep net posi...: Radio buttons for "Y" (selected) and "N".
- Net margin: Radio buttons for "Y" (selected) and "N".
- Activation date: A date picker showing "Mon 01/14/2008".
- Inactivation date: A checkbox (unchecked) and a date picker showing "Tue 01/15/2008".
- Buttons: "Ok" and "Close".

## 4.0 Positions

This menu allows members to manage positions registered in the clearing system. It is possible to see the list of open positions and access the functions of Rectification, Transfer, Subaccount Change and Early Exercise. It's also possible to add positions to Custom Portfolios for Risk Management activities and to upload some file that including a list of clearing operations to be massively executed.

The Positions menu is made by the following tabs:

- **Positions List:** it shows the list of open positions of the clearing member (and its NCM's) and allows to access the functions of Rectification, Transfer, SubAccount Change, Early Exercise Request and Add to Portfolio;
- **Rectify:** it shows the rectified positions of the clearing member (and its NCM's);
- **Transfers:** it shows the position transfers (delivered and received) of the clearing member (and its NCM's); it allows to access the functions of Accept, Reject and Cancel Position Transfer;
- **SubAccount Change:** it shows the list of SubAccount Changes of the clearing member (and its NCM's).

The Massive Upload menu is made by a pop-up windows that contains a list of the operations that can be massively used in the clearing system.

### 4.1 Position list

This window lists all the positions owned by the member. For General Clearing Members, also Non-Clearing Members positions are shown. New positions are automatically shown as soon as they are managed by the clearing system, without having to manually inquire the clearing system. At the same way, any update on a position (i.e. Position Transfer, SubAccount Transfer, Rectifications, ...) is automatically shown.

## Rectify

Rectify allows to increase / decrease positions in options and futures.

It's possible to rectify only IDEM, IDEX and AGREX market positions on Client account.

In order to execute a Rectify, the user should select a position from the Positions List, right click on it and select *Rectify*.

---

# User Guide

August 2020

A pop-up will be opened.

The following steps should be performed:

1. Insert a value into the *Volume* field;
2. Select the *Increase* or *Decrease* option;
3. Press OK button to confirm

A confirmation message informs the user that the transaction has been successfully committed.

## Transfer

The Position Transfer allows to transfer an open position to another clearing member. The clearing system processes the transfer request only after the counterpart has accepted the received position.

Through a Position Transfer is also possible to change the account type of a position. This can be done selecting the member itself as receiver of the transfer and selecting the desired account type while accepting the transfer.

The user can access the position Transfer function right clicking on a specified position in the positions list (also multiple selection is allowed).

Market	ISIN code	Sub account	Long	Short	ABI code	Ac	Volume	Receiver ABI Code	Receiver member	Long/Short	Rectify position	Additional info	Transaction result
DER	IT0012539828	*OMN	0	1503	03045			00001	BORSA ITALIANA S.P.A.	Long	No		

Same receiver member Receiver member: 00001 BORSA ITALIANA S.P.A.

OK Close

---

# User Guide

August 2020

In the Position Transfer pop-up it's possible to enable or disable the "Same Receiver Member" checkbox. Checking this option, it will be possible to specify the same receiver for all the rows in the "Receiver member" listboxes. Unchecking the option, it will be possible to specify a different receiver for each row in the "Receiver ABI Code" and "Receiver member" columns of the table.

In order to send a Position Transfer, the user should select one or more positions from the Positions List, right click on them and select *Transfer*.

The following steps should be performed:

1. Insert a value into the *Volume* field;
2. Select *Long* or *Short* in the *Long/Short* option;
3. Select *Yes* or *No* in the *Rectify Position* option. Selecting *Yes* the clearing system will automatically increase the positions in case they are no more available when the receiver clearing member accepts the transfer (i.e. in case of trade executions on the transferred series);
4. Insert a value into the *Additional Info* field (optional);
5. Select the Receiver Member specifying the ABI code or the clearing member description;
6. Press the *OK* button to confirm.

A confirmation message will be shown informing that the transaction has been correctly sent.

---

# User Guide

August 2020

## Sub Account Change

The Sub Account Change allows to change the subaccount of a specific position. At the same time it's possible to rectify the position and assign a part of it to the new sub account.

Market	ISIN code	Sub account	Volume	Long/Short	Rectify position	Sub account	Additional info	Transaction result
DER	IT0011571418			Long	No			

In order to perform a Sub Account Change, the user should select a position from the Positions List, right click on it and select *Sub Account Change*.

The following steps should be performed:

1. Insert the number of positions to be transferred into the *Volume* field;
2. Select *Long* or *Short* in the *Long/Short* option;
3. Select *Yes* or *No* in the *Rectify Position* option. Selecting *Yes* the clearing system will automatically increase the positions in case they are no more available when the receiver clearing member accepts the transfer (i.e. in case of trade executions on the transferred series);
4. Select the new Sub Account of the position in the *Sub Account* option;
5. Insert a value into the *Additional Info* field (optional);
6. Press the *OK* button to confirm.

A confirmation message will be shown informing that the transaction has been correctly sent.

August 2020

## Early Exercise Request

The Early Exercise Request allows to send early exercise requests to the clearing system.

In order to send an Early Exercise Request, the user should select a position from the Positions List, right click on it and select *Early Exercise Request*.

The screenshot shows a dialog box titled "Exercise request" with the following fields and controls:

- Market Id: IDEM - ITALIAN DERIVATIVES MARKET (dropdown)
- ABI code: 92003 (dropdown)
- ISIN code: IT0010879333 (dropdown) with a "Select Mode" button
- Serie name: ENI5F11 (dropdown) with a "Symbol" button
- Account type: Radio buttons for H and C (C is selected)
- Sub account: \*OMN (dropdown)
- Quantity: Empty text box
- Exercise type: Early exercise (dropdown)
- Additional info: Empty text box
- Buttons: Insert and Cancel

The following steps should be performed:

1. Insert the number of positions to be early exercised into the *Quantity* field; the quantity field is limited to four digits. In order to early exercise a quantity with more than four digits, the user should send more than one request, to cover the whole amount of positions to exercise;
2. Insert a value into the *Additional Info* field (optional);
3. Press the *Insert* button to confirm.

# User Guide

August 2020

The list of early exercise requests sent can be verified in the Exercise/Assignments main menu, in the Exercise Request History sub-menu.

## **Please notice**

An early exercise can be executed also in the **Early Exercise (By Positions)** and **Early Exercise (By Series)** windows, which can be reached through the **Exercise/Assignments** main menu.

## **4.2 Rectifications**

This window lists all the position rectifications of the member. For General Clearing Members, also Non-Clearing Members rectifications are shown. The window lists the rectifications executed on the current business date. New rectifications are automatically shown as soon as they are managed by the clearing system, without having to manually refresh the window.

In order to have access to previous days rectifications, it's possible to click on the "+" button on the Business Date Bar and select the date of interest.

A new tab will appear in the Business Date Bar. The user should select the Market field and click on the Download button. Rectifications that match the specified criteria will be displayed.

Status	Operation status (Y=executed, N=not executed)
Sub Account	Sub Account

## 4.3 Transfers

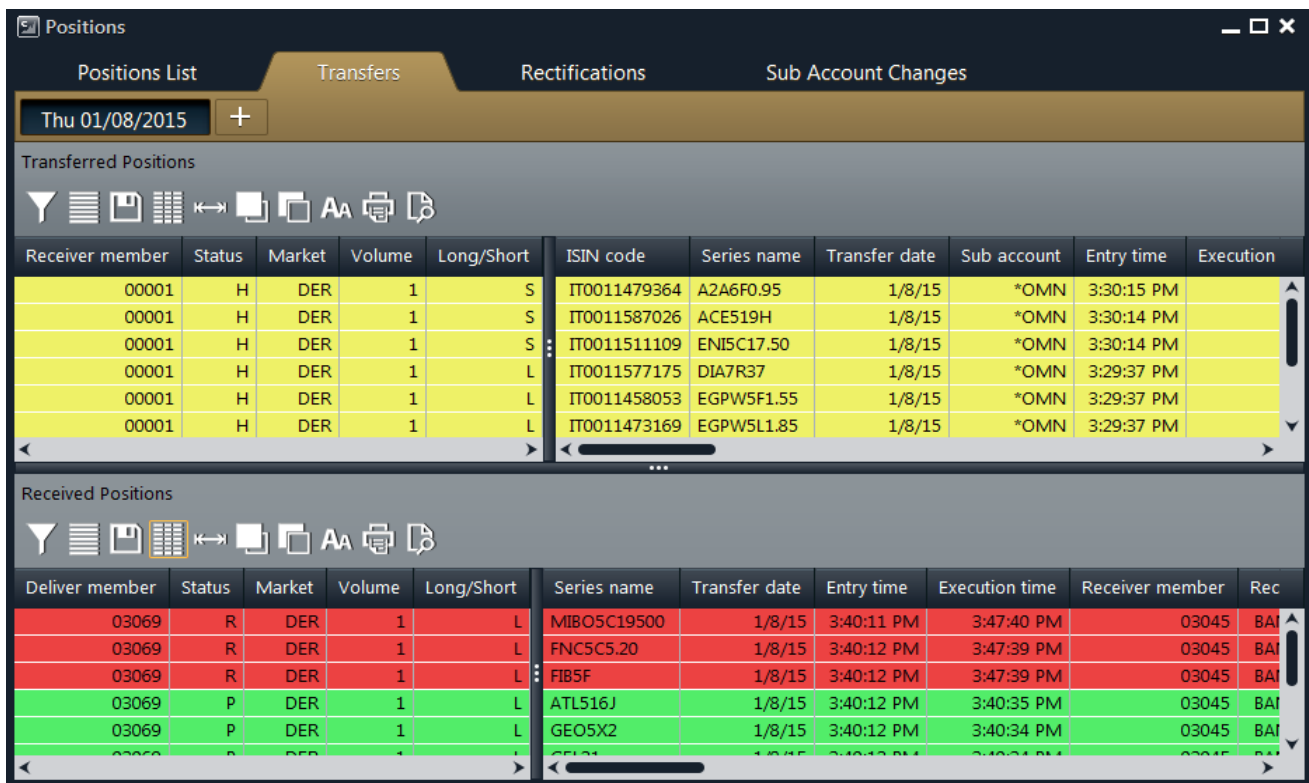

This window lists all the Position Transfers of the member. For General Clearing Members, also Non-Clearing Members transfers are shown. The window lists the transfers executed on the current business date. New transfers are automatically shown as soon as they are managed by the clearing system, without having to manually refresh the window. At the same way, any update on a transfer (i.e. transfer status changed) is automatically shown.

The window is composed by two tables: the *Transferred Positions* and the *Received Positions*. The *Transferred Positions* table shows all the transfers sent by the member to other clearing members or to the member itself. The *Received Positions* table shows all the transfers received by the member. The color of the row identifies if the request has been accepted by the receiver clearing member (green row), has been refused (red row), is still pending (yellow row), or has been cancelled by the member (white row).

In order to have access to previous days transfers, it's possible to click on the "+" button on the Business Date Bar and select the date of interest.

# User Guide

August 2020

A new tab will appear in the Business Date Bar. The user should select the Market field and click on the Download button. Transfers that match the specified criteria will be displayed.

The color of the row shows the transfer status, according to the following table:

Color	Status	Description
Green	Processed	The receiver accepted the transfer. The position is now owned by the receiver.
Red	Rejected	The receiver rejected the transfer. The position is still owned by the sender.
Yellow	Holding	The receiver didn't accept (or reject) the transfer yet. The position is still owned by the sender.
White	Cancelled	The sender cancelled the transfer request before the receiver accepted or rejected it. The position is still owned by the sender.

---

August 2020

Deliver Client Info	Deliver Client Info
Deliver Client Code	Deliver Client Code
Receiver Client Info	Receiver Client Info
Receiver Client Code	Receiver Client Code
Transferred/Received	Transfer Type (Transferred / Received)
Product Type	Product type of the Tradable Series (B = bond, C = equity and fund quotes, F=future, O= option, R = repo, V= convertible, W = warrant)
Position Value	Counter value

## Cancel Transfer Request

Pending position transfers with status H (Holding) can be cancelled by the deliver member. The user should right click on the pending transfers in the *Transferred Positions* table and select *Cancel Transfer Request*.

The following steps should be performed:

1. Press OK button to confirm

A confirmation message will be shown informing that the transaction has been correctly sent.

## Confirm Transfer Request

Pending position transfers with status H (Holding) can be accepted (confirmed) by the receiver member. The user should right click on the pending transfers in the *Received Positions* table and select *Confirm*.

The transfer will be executed by the clearing system only after the user accepts the received position. Received positions can be allocated on house or client account. If the transfer is accepted, the color of the row gets green as soon as the transfer is executed by the clearing system; the red row confirms instead that the transfer request has been rejected by the user.

The following steps should be performed:

---

# User Guide

August 2020

1. Select *Open* or *Close* in the *Open/Close* option;
2. Select *Client* or *House* in the *Receiver Account Type* option;
3. Select the Sub Account in the *Sub Account* option;
4. Insert a value into the *Receiver Client Code* field (optional);
5. Insert a value into the *Receiver Client Info* field (optional);
6. Press OK button to confirm

A confirmation message will be shown informing that the transaction has been correctly sent.

## Reject Transfer Request

Pending position transfers with status H (Holding) can be rejected by the receiver member. The user should right click on the pending transfers in the *Received Positions* table and select *Reject*.

The following steps should be performed:

1. Press OK button to confirm

A confirmation message will be shown informing that the transaction has been correctly sent.

Transfer Price	Transfer price
Request State	Request state
Return Code	Operation result
Counter value	Countervalue

## 4.5 Massive upload

The Massive Upload function allows to massively execute a list of clearing operations through the upload of a file. It is possible to massively execute the following operations:

- Position Transfer;
- Position Rectification;
- SubAccount Change.

The Massive Upload is available clicking on "Positions->Massive Upload" in the BCS Main Menu.

# User Guide

August 2020

Positions Massive Upload

Please, upload a file (.xls, .csv or .xml) containing the clearing operations to be executed in the clearing system.

**Transfers**

[Click here to download the Transfers template file](#)

**Rectifications**

[Click here to download the Rectifications template file](#)

**Sub Account Changes**

[Click here to download the Sub Account Changes template file](#)

In this pop-up it's possible to select an .xls, .csv or .xml file to upload into the BCS Clearing system. Clicking on the link "Click here to download...", the user could download a zip file containing a template file for each format (.xls, .csv and .xml) with all the fields empty. A set of templates is available for each function. Only these files are accepted by the system. It is possible to upload just one file at the time (i.e. a file for the Transfers) that contains max 1000 rows. If the total number of rows in the file exceeds the limit, an error will be shown and the process will be interrupted.

As soon as the Upload button is clicked, the file will be sent to the BCS Server and the pop-up will be closed.

The BCS server performs an automatic parsing in order to collect all the available fields from the file. The following fields are mandatory for the functions described above:

For Position Transfers:

- Long/Short
- Volume
- ReceiverABiCode
- RectifyPosition
- AccountType
- ISINCode
- ABiCode
- SubAccount
- AdditionalInfo

For Rectifications:

- ABiCode
- AccountType
- ISINCode
- Operation
- Volume
- SubAccount

For Sub Account Changes:

- AbiCode
- AccountType

---

# User Guide

August 2020

- OriginalSubAccount
- IsinCode
- Volume
- Long/Short
- AdditionalInfo
- SubAccount
- RectifyPosition

At the end of the process, a pop-up will be shown, listing all the rows in the file. In case one of the rows of the file is not correct (i.e. in case one of the mandatory field is not specified), the corresponding row will be shown in red in the pop-up. The transaction result column will detail the cause of the error (i.e. "Missing ABICode field").

In the Position Transfers pop-up it's possible to enable or disable the "Same Receiver Member" checkbox. Checking this option it will be possible to specify the same receiver for all the rows in the "Receiver member" listboxes. Unchecking the option, it will be possible to specify a different receiver for each row in the "Receiver ABI Code" and "Receiver member" columns of the table.

## 5.0 Trades

This menu allows to manage executed trades registered in the clearing system. It is possible to see the list of trades, the history of a single trade and access the functions of International Give-Up, Trade Transfer, Split, Open/Close Change and Client Code Change.

The Trades menu is made by the following tabs:

- Trades List: it shows the trades of the clearing member (and its NCM's) and allows to access the functions of International Give-Up, Trade Transfer, Split, Open/Close Change and Client Code Change;
- Transfers: it shows the trade transfers (delivered and received) of the clearing member (and its NCM's); it allows to access the functions of Accept, Reject and Cancel Trade Transfer;
- Splits: it shows the splits of the clearing member (and its NCM's);
- Open/Close Changes: it shows the Open / Close Changes of the clearing member (and its NCM's);
- Client Code Changes: it shows the Client Code Changes of the clearing member (and its NCM's);
- Trade History: it shows all the clearing operations performed on the selected trade.

# User Guide

August 2020

## 5.1 Trade list

This window lists all the trades owned by the member. For General Clearing Members, also Non-Clearing Members trades are shown. The window lists the trades of the current business date. New trades are automatically shown as soon as they are managed by the clearing system, without having to manually refresh the window. At the same way, any update on a trade (i.e. Client Code Change, Open / Close Change, Split, International Give Up, Trade Transfer, ...) is automatically shown. A trade is automatically removed from the Trades List after a transfer to another clearing member or after a split. In this case the row is shown in red and after a few seconds it is removed (during this phase the contract state value is R (Reversing)).

The screenshot shows a software window titled 'Trades' with a dark theme. At the top, there are tabs for 'Trades list', 'Transfers', 'Splits', 'Open/Close Changes', and 'Client Code Changes'. Below the tabs is a date selector showing 'Mon 12/29/2014' and a '+' button. A toolbar contains various icons for filtering and viewing. The main area is a table with the following columns: Market, Trade date, Contract number, Side, Trade price, Quantity, Contract state, Account type, Sub account, Series name, and ISIN code. The table contains 30 rows of trade data, all with a trade date of 12/29/14 and a trade price of 1.000000. The contract states are mostly 'T', with some 'R' values. The sub-accounts include '\*OMN MIBO5C19500' and '\*OMN FNC5X5.40'. The ISIN codes are either IT0011563811 or IT0011466718.

Market	Trade date	Contract number	Side	Trade price	Quantity	Contract state	Account type	Sub account	Series name	ISIN code

Market Trade Source	Market Source of the trade. This field is populated only for derivatives markets.

## International Give up

The International Give Up allows to send one or more trades to another clearing member. The transfer is performed at the execution price. The settlement of the variation margins (or the premium as well) is performed accordingly. Only the clearer has to deposit initial margins. The clearing system processes the transfer request only after the counterpart has accepted the received trade. This function is available only on T trades. It is possible to transfer trades only to counterparts other than the member itself. Only the overall amount of trade can be transferred.

The screenshot shows a window titled "International Give-Up" with a close button (X) in the top right corner. The window contains a table with the following columns: ABI code, Market, Trade date, Contract number, Side, Trade price, Quantity, Contract, Receiver ABI Code, Receiver member, Additional info, Rectify position, and Transaction result. The table contains one row of data: 03045, DER, 2/8/17, 31412, S, 0.649800, 1005, 00001, BORSA ITALIANA S.P.A., and No. Below the table, there are input fields for "Total Quantity" (1005) and "Mean Weighted Price" (0.6498). At the bottom, there is a checked checkbox "Same receiver member" and a dropdown menu for "Receiver member" set to "00001 BORSA ITALIANA S.P.A.". "Ok" and "Close" buttons are at the bottom center.

---

# User Guide

August 2020

In order to send an International Give up, the user should select one or more trades from the Trades List, right click on them and select *International Give-Up*.

The following steps should be performed:

1. Select *Yes* or *No* in the *Rectify Position* option. Selecting *Yes* the clearing system will automatically increase the positions in case they are no more available when the receiver clearing member accepts the transfer (i.e. in case of trade executions on the transferred series);
3. Insert a value into the *Additional Info* field (optional);
4. Select the Receiver Member specifying the ABI code or the clearing member description;
5. Press the *OK* button to confirm.

A confirmation message will be shown informing that the transaction has been correctly sent.

In the International Give-Ups pop-up it is possible to enable or disable the “Same Receiver Member” checkbox. Checking this option it will be possible to specify the same receiver for all the rows in the “Receiver member” list boxes. Unchecking the option it will be possible to specify a different receiver for each row in the “Receiver ABI Code” and “Receiver member” columns of the table.

## Trade Transfer

The Trade Transfer allows to send one or more trades to other clearing members or to the member itself. The transfer is performed at the execution price. The settlement of the variation margins (or the premium as well) is performed accordingly. Only the clearer has to deposit initial margins. The clearing system processes the transfer request only after the counterpart has accepted the received trade. This function is available on all trades between T+1 and T+5. Only the overall amount of trade can be transferred.

Through a Trade Transfer is also possible to change the account type of a position. This can be done selecting the member itself as receiver of the transfer and selecting the desired account type while accepting the transfer.

In order to send a Trade Transfer, the user should click on the “+” button on the Business Date Bar and select the T+1 (until T+5) date. A new tab will appear in the Business Date Bar. The user should select the Market, the Account Type and the Side fields and click on the Download button. Trades that match the specified criteria will be displayed. The user should select one or more trades from the Trades List, right click on them and select *Trade Transfer*.

---

# User Guide

August 2020

The following steps should be performed:

1. Select *Yes* or *No* in the *Rectify Position* option. Selecting *Yes* the clearing system will automatically increase the positions in case they are no more available when the receiver clearing member accepts the transfer (i.e. in case of trade executions on the transferred series);
3. Insert a value into the *Additional Info* field (optional);
4. Select the Receiver Member specifying the ABI code or the clearing member description;
5. Press the *OK* button to confirm.

A confirmation message will be shown informing that the transaction has been correctly sent.

In the Trade Transfer pop-up it is possible to enable or disable the “Same Receiver Member” checkbox. Checking this option it will be possible to specify the same receiver for all the rows in the “Receiver member” list boxes. Unchecking the option it will be possible to specify a different receiver for each row in the “Receiver ABI Code” and “Receiver member” columns of the table.

## Split

The Split allows to separate any trade into a set trades (up to 8), each one having a different volume amount. The total amount of the separated trades should be equal to the volume of the original trade.

This function is allowed on all trades between T and T+5.

In order to execute a Split, the user should select a trade from the Trades List, right click on it and select *Split*.

# User Guide

August 2020

Current Trade									
ABI code	Market	Trade date	Contract number	Side	Trade price	Cont	Client code	Client info	Quantity
95000	DER	6/25/15	19325	S	23,055.000000		101		15

New Trades									
ABI code	Market	Trade date	Contract number	Side	Trade price	Cont	Client code	Client info	Quantity
95000	DER	6/25/15		S	23,055.000000		split1	info1	5
95000	DER	6/25/15		S	23,055.000000		split2	info2	10

Ok Cancel Remaining Quantity: 0 Rectify position N

A pop-up will be opened, showing in the higher part the current trade and in the lower part the trades that will be created after the split.

The following steps should be performed:

1. Insert a value into the *Quantity* field in both the rows of the *New Trades* table. In case more than two trades should be generated from the split, the total amount should be lower than the quantity of the original trade; in this case, an additional row will be shown in the *New Trades* table, allowing to specify the *Quantity* field for another trade. The *Remaining Quantity* indicator, in the lower part of the window, shows the quantity of the original trade that still needs to be allocated;
2. Repeat the insertion of the quantity for each trade that should be generated from the split (up to 8 trades);
3. Insert a value into the *Client Code* field in any row of the *New Trades* table (optional);
4. Insert a value into the *Client Info* field in any row of the *New Trades* table (optional);
5. Press the *OK* button to confirm.

---

# User Guide

August 2020

A confirmation message will be shown informing that the transaction has been correctly sent.

## Open / Close Change

This function is allowed only on T trades.

In order to execute an Open / Close Change, the user should select one or more trades from the Trades List, right click on them and select *Open/Close Change*.

ABI code	Market	Contract number	Side	Trade price	Open/Close	Rectify position	Transaction result
95000	DER	19325	B	23,055.000000	Open	No	

The following steps should be performed:

1. Select *Open* or *Close* in the *Open/Close* option;
2. Select *Yes* or *No* in the *Rectify Position* option;
3. Press OK button to confirm

A confirmation message will be shown informing that the transaction has been correctly sent.

# User Guide

August 2020

## Client Code Change

This function is allowed on all trades between T and T+2.

The Client Code Change allows to change the *Client Code* and the *Client Info* values of one or more trades. This operation could trigger a Sub Account Change or an Automatic Give-Up in case the specified Client Code has been previously created and associated to any of this functionalities (see sections 3.6 and 3.7).

ABI code	Market	Contract number	Side	Trade price	Quantity	Client code	Client info	Transaction result
95000	DER	19164	B	23,055.000000	10	New Code	New Info	

In order to execute a Client Code Change, the user should select one or more trades from the Trades List, right click on them and select *Client Code Change*.

The following steps should be performed:

1. Insert a value into the *Client Code* field;
2. Insert a value into the *Client Info* field (optional);
3. Press the *OK* button to confirm.

In case multiple trades have been selected, it's possible to insert the same *Client Code* and the same *Client Info* values in all of them at the same time using the copy and paste functionality (CTRL+C; CTRL+V) in the *Client Code Change* window.

---

# User Guide

August 2020

## Trade History

The Trade History allows to download all the clearing operations done on a selected trade.

In order to access the Trade History, the user should select a trade from the Trades List, right click on it and select *Trade History*.

A pop-up will be shown, listing each clearing operation performed on the trade:

Table columns description:

## 5.2 Transfers

This window lists all the International Give-Ups and Trade Transfers of the member. For General Clearing Members, also Non-Clearing Members transfers are shown. The window lists the transfers executed on the current business date. New transfers are automatically shown as soon as they are managed by the clearing system, without having to manually refresh the window. At the same way, any update on a transfer (i.e. transfer status changed) is automatically shown.

The window is composed by two tables: the *Transferred Trades* and the *Received Trades*. The *Transferred Trades* table shows all the transfers sent by the member to other clearing members. The *Received Trades* table shows all the transfers received by the member. The color of the row identifies if the request has been accepted by the receiver clearing member (green row), has been refused (red row), is still pending (yellow row), or has been cancelled by the member (white row).

In order to have access to previous days transfers, it's possible to click on the "+" button on the Business Date Bar and select the date of interest.

A new tab will appear in the Business Date Bar. The user should select the Market field and click on the Download button. Transfers that match the specified criteria will be displayed.

The color of the row shows the transfer status, according to the following table:

Color	Status	Description
Green	Processed	The receiver accepted the transfer. The trade is now owned by the receiver.
Red	Rejected	The receiver rejected the transfer. The trade is still owned by the sender.
Yellow	Holding	The receiver didn't accept (or reject) the transfer yet. The trade is still owned by the sender.
White	Cancelled	The sender cancelled the transfer request before the receiver accepted or rejected it. The trade is still owned by the sender.

Table columns description:

Deliver Member	Deliver ABI Code
Receiver Member	Receiver ABI Code
Deliver Name	Deliver Name
Receiver Name	Receiver Name

Quantity	Transfer Quantity
Transferred/Received	Transfer Type (Transferred / Received)
Product Type	Product type of the Tradable Series (B = bond, C = equity and fund quotes, F=future, O= option, R = repo, V= convertible, W = warrant)
Transfer Mode	Transfer Mode (Automatic / Manual)

## Cancel Transfer Request

Pending trade transfers with status H (Holding) can be cancelled by the deliver member. The user should right click on the pending transfers in the *Transferred Trades* table and select *Cancel Transfer Request*.

The following steps should be performed:

2. Press OK button to confirm

A confirmation message will be shown informing that the transaction has been correctly sent.

## Confirm Transfer Request

Pending trade transfers with status H (Holding) can be accepted (confirmed) by the receiver member. The user should right click on the pending transfers in the *Received Trades* table and select *Confirm*.

The transfer will be executed by the clearing system only after the user accepts the received trade. Received trades can be allocated on house or client account. If the transfer is accepted, the color of the row gets green as soon as the transfer is executed by the clearing system; the red row confirms instead that the transfer request has been rejected by the user.

Please notice: Trades transferred via Automatic Give-Up don't need to be accepted by the receiver member.

---

# User Guide

August 2020

International Give-ups not accepted by the end of the day, will expire.

The following steps should be performed:

7. Select *Open* or *Close* in the *Open/Close* option;
8. Select *Client* or *House* in the *Account Type* option;
9. Insert a value into the *Client Code* field (optional);
10. Insert a value into the *Client Info* field (optional);
11. Press OK button to confirm

A confirmation message will be shown informing that the transaction has been correctly sent.

## Reject Transfer Request

Pending trade transfers with status H (Holding) can be rejected by the receiver member. The user should right click on the pending transfers in the *Received Trades* table and select *Reject*.

The following steps should be performed:

2. Press OK button to confirm

A confirmation message will be shown informing that the transaction has been correctly sent.

## 5.3 Splits

This window lists all the trade splits executed by the member. For General Clearing Members, also Non-Clearing Members splits are shown. The window lists the splits executed on the current business date. New splits are automatically shown as soon as they are managed by the clearing system, without having to manually refresh the window. In order to have access to previous days splits, it's possible to click on the "+" button on the Business Date Bar and select the date of interest.

A new tab will appear in the Business Date Bar. The user should select the Market field and click on the Download button. Splits that match the specified criteria will be displayed.

It's possible to cancel any split operation performed on the current day. The cancel feature deletes the split trades and re-create the original trade with the original quantity and the original contract number.

In order to cancel a split, the user should clicks on a row; the GUI will highlight all the rows with the same OriginalContractNumber of the selected one. The user should then right click on one of the highlighted rows and select the option "Cancel Split".

A pop-up will be shown. Clicking the Ok button, the cancel request will be sent to the system.

Table columns description:

## 5.6 Massive upload

The Massive Upload function allows to massively execute a list of clearing operations through the upload of a file. It is possible to massively execute the following operations:

- Open/Close;
- International Give-Up;
- Trade Transfer;
- Client Code Change.

Trades Massive Upload

Please, upload a file (.xls, .csv or .xml) containing the clearing operations to be executed in the clearing system.

**International Give-Up**

[Click here to download the International Give-Up template file](#)

**Transfers T+1 T+2**

[Click here to download the Transfers T+1 T+2 template file](#)

**Open/Close Changes**

[Click here to download the Open/Close Changes template file](#)

**Client Code Changes**

[Click here to download the Client Code Changes template file](#)

The Massive Upload is available clicking on “Trades->Massive Upload” in the BCS Main Menu.

In this pop-up it's possible to select an .xls, .csv or .xml file to upload into the BCS Clearing system. Clicking on the link “Click here to download...”, the user could download a zip file containing a template file for each format (.xls, .csv and .xml) with all the fields empty. A set of templates is available for each function. Only these files are accepted by

---

# User Guide

August 2020

the system. It is possible to upload just one file at the time (i.e. a file for the International Give-Ups) that contains max 1000 rows. If the total number of rows in the file exceeds the limit, an error will be shown and the process will be interrupted. As soon as the Upload button is clicked, the file will be sent to the BCS Server and the pop-up will be closed.

The BCS server performs an automatic parsing in order to collect all the available fields from the file. The following fields are mandatory for the functions described above:

For the International Give-Ups:

- ContractNumber
- ContractDate
- AccountType
- Side
- Quantity
- ReceiverABiCode
- RectifyPosition
- AdditionalInfo

For the Trade Transfers:

- ContractNumber
- ContractDate
- AccountType
- Side
- Quantity
- ReceiverABiCode
- RectifyPosition
- AdditionalInfo

For the Open/Close Changes:

- ContractNumber
- Market
- OpenClose
- ContractDate
- Side

For the Client Code Changes:

- ContractNumber
- Market
- ClientCode
- ContractDate
- Side
- RectifyPosition
- ClientInfo

At the end of the process, a pop-up will be shown, listing all the rows in the file. In case one of the rows of the file is not correct (i.e. in case one of the mandatory field is not

# User Guide

August 2020

specified), the corresponding row will be shown in red in the pop-up. The transaction result column will detail the cause of the error (i.e. "Missing ABICode field").

ABI code	Market	Trade date	Contract number	Side	Tr	Receiver ABI Code	Receiver member	Additional info	Rectify position	Transaction result
03045	DER	1/31/17	32173	S		00001	BORSA ITALIANA S.P.A.	AI1	Yes	
03045	DER	1/31/17	32173	S		00001	BORSA ITALIANA S.P.A.	AI1	Yes	
03045	DER	1/31/17	32173	S		90000	CASSA DI COMPENSAZIONE E GARANZIA	AI1	Yes	

Total Quantity: 1500 Mean Weighted Price: 0.6499

Same receiver member Receiver member: 00001 BORSA ITALIANA S.P.A.

Ok Close

In the International Give-Ups and in the Trade Transfers pop-up it's possible to enable or disable the "Same Receiver Member" checkbox. Checking this option it will be possible to specify the same receiver for all the rows in the "Receiver member" listboxes. Unchecking the option, it will be possible to specify a different receiver for each row in the "Receiver ABI Code" and "Receiver member" columns of the table.

## 6.0 Exercise / Assignments

This menu allows to exercise the long option positions and verify the assignments received for the short option positions.

The Exercise/Assignments menu is made by the following sub-menus:

- Early Exercise: it allows to access the function of Early Exercise “By Position”, i.e. by seeking the option position to exercise within the list of the open positions, or “By Series”, i.e. by seeking the option series to exercise within the list of all the option series;
- Expiry Exercise (Exercise By Exception): it allows to access the function of Expiry Exercise (Exercise By Exception) By Positions, i.e. by seeking the expiring option position within the list of the expiring option positions (where are also indicated the automatic exercises proposed by the clearing system), or “By Series”, i.e. by seeking the expiring option series within the list of all the expiring option series;
- Exercise Request History: it shows the early exercise requests and the expiry exercises (Exercise By Exception) requests sent by the member to the clearing system;
- Assignments: it shows all the assignments received by the member for its short option positions.

The information for the use of the above mentioned functions are provided below.

### 6.1 Early Exercise (By Positions)

This window lists all the options positions of the member for which is possible to send an Early Exercise Request (long positions). For General Clearing Members, also Non-Clearing Members data are shown. New data are automatically shown as soon as they are processed by the clearing system, without the need for manual refresh of the window. At the same way, any update on a position is automatically shown.

## Early Exercise Request

The Early Exercise Request allows to send an early exercise request on the specified position to the clearing system.

In order to send an Early Exercise Request, the user should select a position from the Early Exercise (By Positions) window, right click on it and select *Early Exercise Request*.

The screenshot shows a window titled "Exercise request" with the following fields and controls:

- Market Id: IDEM - ITALIAN DERIVATIVES MARKET (dropdown)
- ABI code: 92003 (dropdown)
- ISIN code: IT0010879333 (dropdown) with a "Select Mode" button
- Serie name: ENI5F11 (dropdown) with a "Symbol" button
- Account type:  H  C
- Sub account: \*OMN (dropdown)
- Quantity: (empty text box)
- Exercise type: Early exercise (dropdown)
- Additional info: (empty text box)
- Buttons: Insert, Cancel

The following steps should be performed:

1. Insert the number of positions to be early exercised into the *Quantity* field; the quantity field is limited to four digits. In order to early exercise a quantity with more than four digits, the user should send more than one request, to cover the whole amount of positions to exercise;
2. Insert a value into the *Additional Info* field (optional);
3. Press the *Insert* button to confirm.

---

# User Guide

August 2020

The list of early exercise requests sent can be downloaded through the Exercise/Assignments main menu, in the Exercise Request History sub-menu.

## **Please notice**

An early exercise can be executed also in the Positions List window, which can be reached through the Positions main menu or in the Early Exercise (By Series) window, reachable from the Exercise / Assignments menu.

## **6.2 Early Exercise (By Series)**

The Early Exercise (By Series) window allows to send early exercise requests to the clearing system by seeking the option series to exercise within the list of all the option series.

The following steps should be performed:

1. Select the tradable series of the position to early exercise in the *ISIN Code* or in the *Series Name* field;

# User Guide

August 2020

2. Select *H* or *C* in the Account Type option;
3. Select the Sub Account of the position to early exercise in the *Sub Account* field;
4. Insert the number of positions to be early exercised into the *Quantity* field; the quantity field is limited to four digits. In order to early exercise a quantity with more than four digits, the user should send more than one request, to cover the whole amount of positions to exercise;
5. Insert a value into the *Additional Info* field (optional);
6. Press the *Insert* button to confirm.

A confirmation message informs the user that the transaction has been successfully committed

## **Please notice**

An early exercise can be executed also in the Position List window, reachable from the Positions item of the main menu or in the Early Exercise (By Position) window, reachable from the Exercise / Assignments menu.

## **6.3 Expiry Exercise (Exercise by Exception) (By Positions)**

This window lists all the automatic and non-automatic exercise proposals which could be confirmed or exercised by exception by the member. If the member intends to accept all exercise and non-exercise proposals, it does not need to perform any operations. For General Clearing Members, also Non-Clearing Members data are shown. Any update of the window is automatically shown without the need for manual refresh. Any exercise proposal will be automatically updated in case of Exercise By Exception sent by the member.

Market	Account type	ITM/OTM	Proposed quantity	Requested quantity	Exercise type	Sub account	Symbol	Expiration month	Strike price
02	C	I	0	0	P	*OMN	EDEL	01/2015	30

## Exercise By Exception Request

The Exercise By Exception allows the user to send:

# User Guide

August 2020

1. a request to partially or entirely exercise an Out of the Money option, which would be otherwise, abandoned by the clearing system;
2. a request to entirely abandon an In the Money option, which would be otherwise exercised by the clearing system.

In order to send an Exercise By Exception request, the user should select an expiry exercise proposal from the Expiry Exercise (Exercise By Exception) (By Positions) window, right click on it and select *Exercise by Exception*.

The screenshot shows a dialog box titled "Exercise request" with the following fields and values:

- Market Id: IDEM - ITALIAN DERIVATIVES MARKET
- ABI code: 95000
- ISIN code: IT0012265325
- Serie name: (empty)
- Account type:  H  C
- Sub-account: \*OMN
- Quantity: (empty)
- Exercise type: Exception
- Additional info: (empty)

Summary statistics at the bottom:

- Proposed positions: 0
- Positions to exercise: 0
- Positions to abandon: 71

Buttons: Insert, Cancel

The following steps should be performed:

---

# User Guide

August 2020

1. Insert the number of positions to be exercised by exception into the *Quantity* field; the quantity field is limited to six digits. Every Exercise by Exception sent replaces a previous request already sent on the same ISIN Code / Abi Code / Account Type / Sub Account;
2. Insert a value into the *Additional Info* field (optional);
3. Press the *Insert* button to confirm.

The list of exercise by exception requests sent can be downloaded through the Exercise/Assignments main menu, in the Exercise Request History sub-menu.

## **Please notice**

An exercise by exception can be executed also in the Expiry Exercise (Exercise By Exception) (By Series) window, reachable from the Exercise / Assignments menu.

## **6.4 Expiry Exercise (Exercise by Exception) (By Series)**

The Expiry Exercise (Exercise By Exception) (By Series) window allows to send to the an exercise by exception request to the clearing system.

# User Guide

August 2020

The screenshot shows a software dialog box titled "Exercise request". It contains the following fields and controls:

- Market Id:** A dropdown menu currently showing "IDEM - ITALIAN DERIVATIVES MARKET".
- ABI code:** A dropdown menu.
- ISIN code:** A text input field containing "IT0010879333" with a dropdown arrow on the right, and a "Select Mode" button.
- Serie name:** A text input field containing "ENISF11" with a dropdown arrow on the right, and a "Symbol" button.
- Account type:** Radio buttons for "H" (selected) and "C".
- Sub account:** A dropdown menu.
- Quantity:** An empty text input field.
- Exercise type:** A dropdown menu showing "Exception".
- Additional info:** An empty text input field.
- Buttons:** "Insert" and "Cancel" buttons at the bottom.

The following steps should be performed:

1. Select the tradable series of the position to exercise by exception in the *ISIN Code* or in the *Series Name* field;
2. Select *H* or *C* in the *Account Type* option;
3. Select the *Sub Account* of the position to exercise by exception in the *Sub Account* field;
4. Insert the number of positions to be exercised by exception into the *Quantity* field; the quantity field is limited to six digits. Every Exercise by Exception sent replaces a previous request already sent on the same *ISIN Code / Abi Code / Account Type / Sub Account*;
5. Insert a value into the *Additional Info* field (optional);
6. Press the *Insert* button to confirm.

---

# User Guide

August 2020

A confirmation message informs the user that the transaction has been successfully committed

**Please notice**

An exercise by exception can be executed also in the Expiry Exercise (Exercise By Exception) (By Positions) window, reachable from the Exercise / Assignments menu.

# User Guide

August 2020

## 6.5 Exercise Request History

The Exercise Request History window is made by the following tabs:

- Early Exercises Sent: it shows the list of early exercise requests sent to the clearing system by the clearing member (and its NCM's) and allows to access the function of Cancel Early Exercise Request;
- Expiry Exercises: it shows the list of exercises by exception sent to the clearing system by the clearing member (and its NCM's).

### Early Exercises Sent

This window lists all the early exercise requests sent by the member. For General Clearing Members, also Non-Clearing Members exercises are shown. The window lists the early exercise requests of the current business date. New exercises are automatically shown as soon as they are managed by the clearing system, without having to manually refresh the window. At the same way, any update on an exercise (i.e. cancellation) is automatically shown.

The screenshot shows a software window titled "Exercise request history" with two tabs: "Early exercises sent" (selected) and "Expiry Exercises". Below the tabs is a date selector showing "Thu 01/08/2015" and a "+" button. A toolbar contains icons for filter, list, print, refresh, zoom, and search. The main area displays a table with the following data:

Market	ISIN code	Series name	Sub account	Account type	Quantity	Exercise date	Exercise time	Status
DER	IT0012014541	BP5C0.80	*OMN	C	1	1/8/15	12:41:59 PM	P
DER	IT0012014566	BP5C0.78	*OMN	C	1	1/8/15	12:41:53 PM	P
DER	IT0012201395	BP5A1.30	*OMN	C	1	1/8/15	12:41:41 PM	P

In order to have access to previous days exercises, it's possible to click on the "+" button on the Business Date Bar and select the date of interest.

A new tab will appear in the Business Date Bar. The user should select the Market and the ABI Code fields and click on the Download button. Exercises that match the specified criteria will be displayed.

Symbol	Alphanumeric symbol of underlying instrument
Series Name	Name of the Tradable Series
Strike Price	Strike price
Put/Call	Put/Call
Expiration month	Expiration Month
Additional info	Free text additional info
Product Type	Product type (B = bond, C = equity and fund quotes, F = future, O = option, R = repo, V = convertible, W = warrant)
Underlying Price	Underlying price
Status	Status of the Early Exercise Request (P=Processed, R=Refused)

## **Please notice**

A cancel functionality for ex by ex requests is not available. Since the last ex by ex request always overwrites the former (on the same ISIN Code / Abi Code / Account Type / Sub Account), the user can just send another request with quantity 0 to delete a request previously sent.

## **6.6 Assignments**

This window lists all the assignments received for the short option positions of the member. For General Clearing Members, also Non-Clearing Members assignments are shown. The window lists the assignments of the current business date. New assignments are automatically shown as soon as they are managed by the clearing system, without having to manually refresh the window.

In order to have access to previous days assignments, it's possible to click on the "+" button on the Business Date Bar and select the date of interest.

A new tab will appear in the Business Date Bar. The user should select the Market and the ABI Code fields and click on the Download button. Assignments that match the specified criteria will be displayed.

## 7.0 Risk Management

This menu allows to access to all the Risk Management functionalities: Trade Limit, Position Limit, Margin Limit and What If.

The Risk Management menu is made by the following windows:

- **Trades Limit:** it shows the list of trade limits of the clearing member (and its NCM's) and allows to create a new limit or change and delete an existing limit; for each trade limit, an alarm will be shown as soon as a new executed trade fall under the imposed trade limit threshold; this check will be carried out evaluating, for each new executed trades, the notional value for derivatives products or the counter value for stock contracts;
  - for derivatives instruments, the notional value is calculated multiplying the price by the quantity by the Index Point Value or Contract Size (if the instrument is on Index or on Stock); for a future instruments the price variable might refer to the trade price, settlement price or a VWAP price, while for an option instrument the price variable might refer to the premium or the strike price.
  - for stock instruments, the counter value is calculated multiplying the price by the quantity.
- **Position Limit:** it shows the list of position limits of the clearing member (and its NCM's) and allows to create a new limit or change and delete an existing limit; it shows, for each position limit, the limit values of the current business day; as for trade limit, this check is carried out evaluating, for all the trades in place that composes the positions included in the Position Limit, the notional value for derivatives products or the counter value for stock contracts;
- **Margin Limit:** it shows the list of the existing portfolios of the clearing member (and its NCM's) and, for each portfolio, the margin limit values of the current business day and the portfolio definition; it allows to create a new portfolio (and related margin limit) or change and delete an existing portfolio (and related margin limit);
- **What If:** it allows to simulate the margin amount that the clearing system will ask to the member in case of a change on a the current open positions.

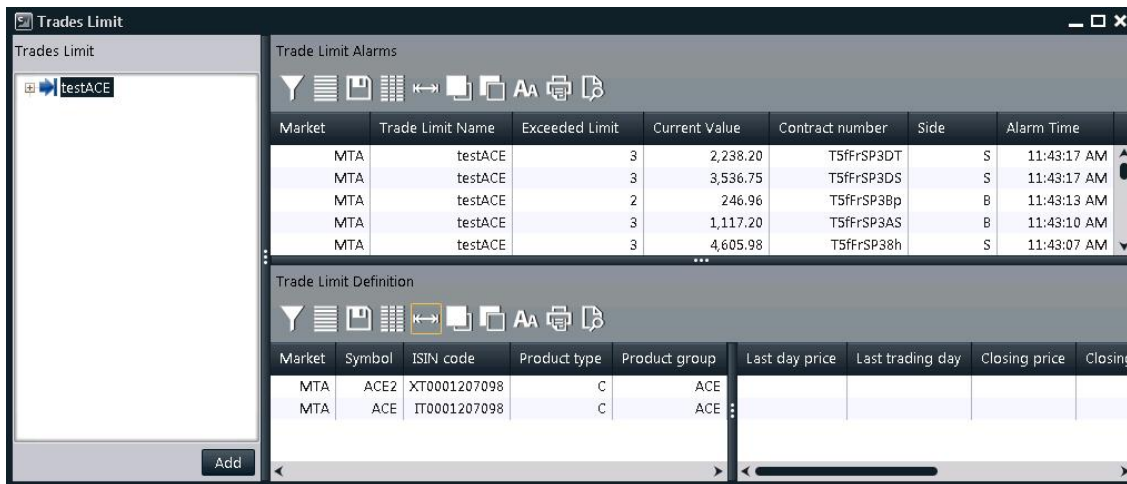

Please note that the result of the calculation it is not binding for CC&G.

# User Guide

August 2020

## 7.1 Trade Limit

This window is composed by three tables:

- *Trades Limit*: lists all the existing trade limits; right clicking on the limit, it is possible to change or delete the trade limit; clicking on the icon next to the Limit name, the details of the limit are shown. In case the risk engine doesn't work properly and the limit computation is not possible, the corresponding trade limit name will be highlighted with a yellow background. Clicking on the "Add" button, it is possible to add a new trade limit through the following window.

# User Guide

August 2020

The following steps should be performed:

The screenshot shows the 'Add Trade Limit' dialog box with the following configuration:

- Market: IDEM - ITALIAN DERIVATIVES MARKET
- Trade Limit Name: Limit1
- ABI code: 95000
- Product Group: PRY
- Account type: Any
- Product type: Options
- Limit Indicator: (blank)
- Put/Call: Put
- Expiry Day List: 20150717, 20150821, 20150918, 20151218
- Strike Price List: 19, 19.5, 20, 21
- Limit 1: 100000
- Limit 2 (% of Limit 1): 2
- Limit 3 (% of Limit 2): 2

1. Select the market from the Market List;
2. Insert the Trade Limit Name in the related text box;
3. Select the ABI code from the combobox;
4. Select the ProductGroup from the combobox
5. Define a value for the Limit1

In order to narrow the subset of trades to be included in the limit, it is possible to select values for ProductType, Put/Call, ExpiryDay, StrikePrice; if the LimitIndicator field is blank, the "StrikePrice" value is considered as default value.

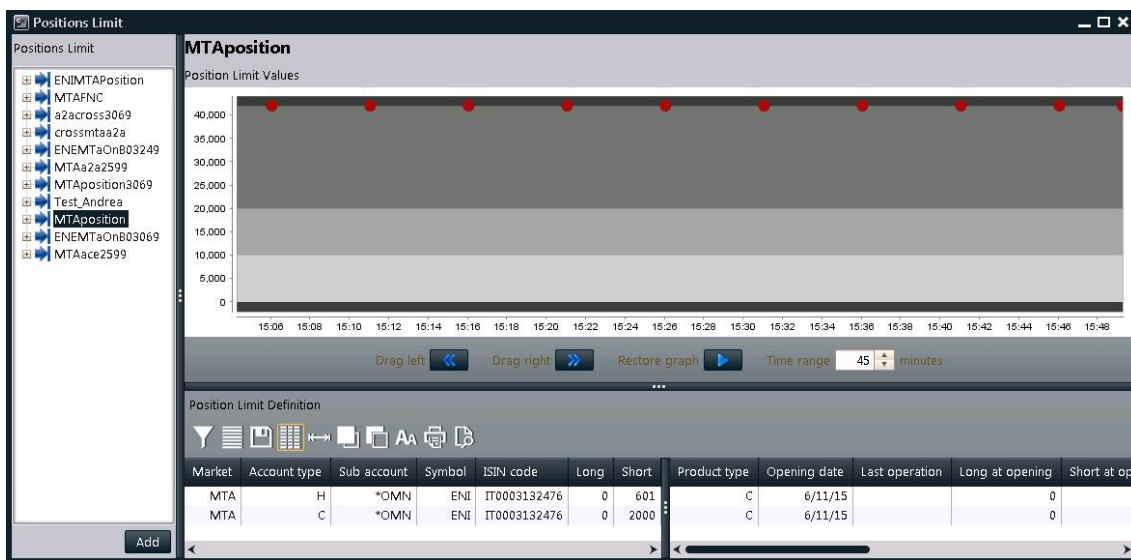

Clicking on the icon next to the Limit name the details of the limit are shown.

- *Trade Limit Definition*: it shows all the series included in the selected Trade Limit.
- *Trade Limit Alarm*: it shows an alarm as soon as an executed trade fall under the imposed trade limit threshold.

# User Guide

August 2020

## 7.2 Position Limit

This window is composed by three tables:

- *Positions Limit*: lists all the existing position limits; right clicking on the limit, it is possible to change or delete the position limit; clicking on the icon next to the Limit name, the details of the limit are shown. In case the risk engine doesn't work properly and the limit computation is not possible, the corresponding position limit name will be highlighted with a yellow background. Clicking on the "Add" button on the bottom, it is possible to add a new position limit through the following window.

# User Guide

August 2020

The following steps should be performed:

The screenshot shows the 'Add Position Limit' dialog box with the following configuration:

- Market: IDEM - ITALIAN DERIVATIVES MARKET
- Position Limit Name: Limit1
- ABI code: 95000
- Product Group: FNC
- Account type: Any
- Product type: Any
- Limit Indicator: Strike Price
- Put/Call: Any
- Expiry Day List: 20150717, 20150821, 20150918, 20151218
- Strike Price List: 0, 14, 14.5, 15
- Limit 1: 10000
- Cross Strike Netting: (blank)
- Limit 2 (% of Limit 1): 30
- Limit 3 (% of Limit 2): 35

1. Select the market from the Market List;
2. Insert the Position Limit Name in the related text box;
3. Select the ABI code from the combobox;
4. Select the ProductGroup from the combobox
5. Define a value for the Limit1

In order to narrow the subset of positions to be included in the limit, it is possible to select values for ProductType, Put/Call, ExpiryDay, StrikePrice; if the LimitIndicator field is blank, the "StrikePrice" value is considered as default value.

- *Position Limit Definition*: it shows all the positions included in the selected Positions Limit.
- *Position Limit Values*: it shows the timetable of the limit values, and the threshold of the Limit1 and, if specified in the PositionLimit definition, the threshold of Limit 2 and Limit 3. Every five minutes, a notification with the Position Limit value is received, and the

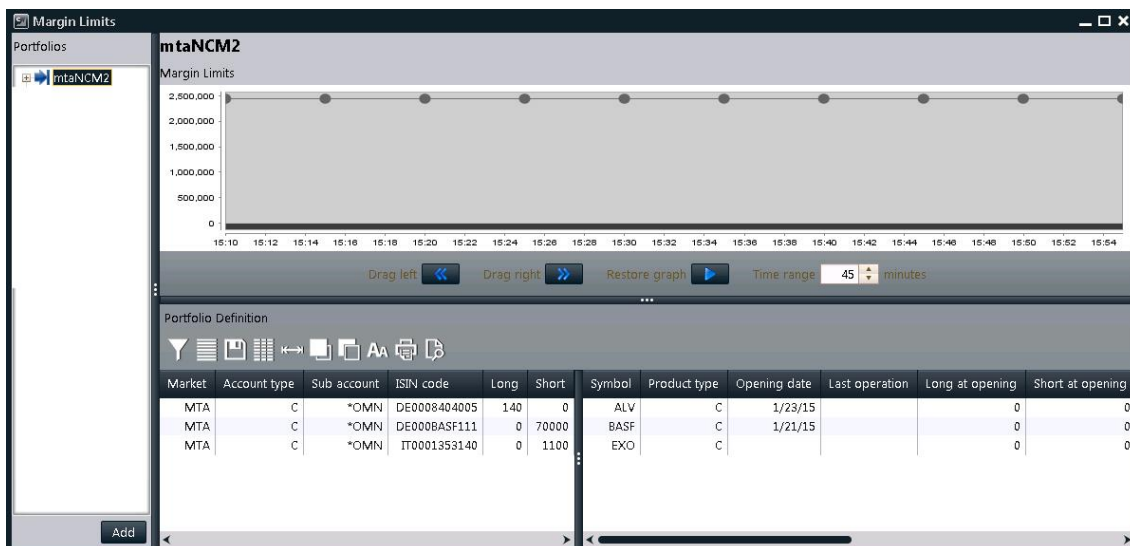

# User Guide

August 2020

chart in the Position Limit Values table updates accordingly; as soon as a clearing operation that impacts the Position Limit value is executed, a notification with the new value of the Position Limit is received, and the chart in the Position Limit Values table updates accordingly.

## 7.3 Margin Limit

This window is composed by three tables:

- **Portfolios:** lists all the existing portfolios of the clearing member (and its NCM's) with an associated margin limit. By right clicking on the portfolio, it is possible to change the portfolio and the related margin limit or to delete them. By clicking on the icon next to the Portfolio name, the details of the portfolio and of the related margin limit are shown. In case the risk engine doesn't work properly and the margin limit computation is not possible, the corresponding Portfolio name will be highlighted with a yellow background. By clicking on the "Add" button on the bottom, it is possible to add a new portfolio with a new associated margin limit through the following window.

  2. Insert the Portfolio Name in the related text box;
  3. Select the ABI code from the combobox;
  4. Select the Account Type from the combobox;
  5. Select the Market from the related combobox;
  6. Select the list of Members to be added in the new portfolio from the list of the available ones;
  7. Define the Margin Limit by filling in the related text boxes: Margin Limit Name, Initial Margin value, Limit 1, Limit 2, and Limit 3 values.
- *Portfolio Definition*: it shows the composition of the selected portfolio.

# User Guide

August 2020

- **Margin Limits:** it shows, for each portfolio, the timetable of the margin limit values of the current business day and the threshold of the Limit1, Limit2, and Limit3. Every five minutes, a notification with the Margin Limit value is received, and the chart in the Margin Limits table updates accordingly; as soon as a clearing operation that impacts the Margin Limits value is executed, a notification with the new value of the Margin Limits is received, and the chart in the Margin Limits table updates accordingly.

## 7.4 What If

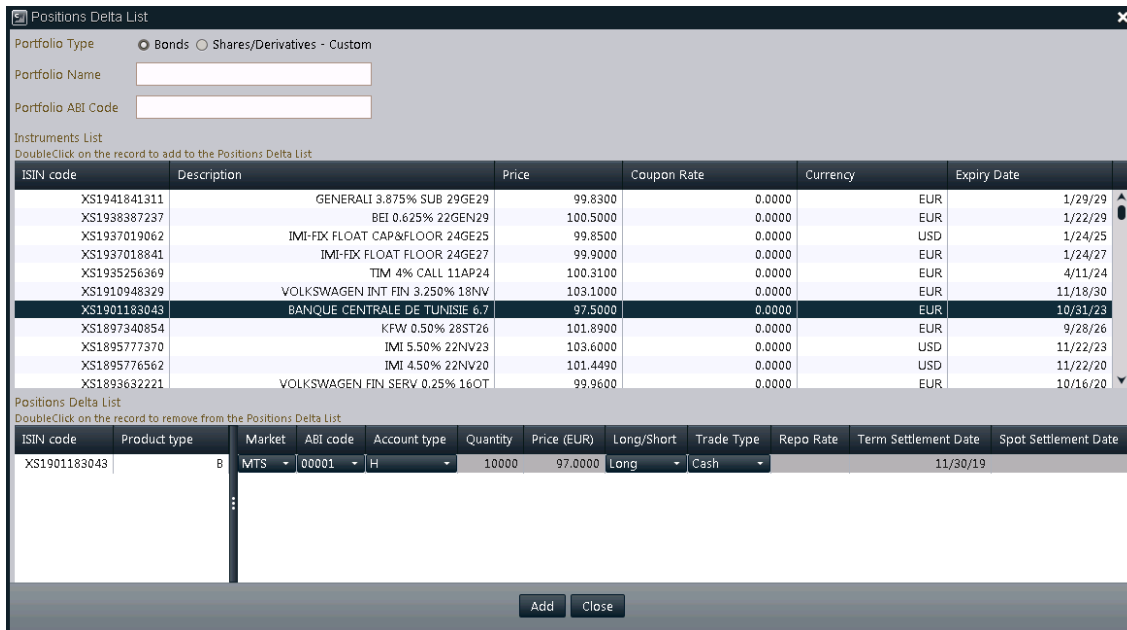

This window is composed by three tables:

- **Starting Portfolio:** lists the available portfolios that can be used as a starting point for the What If computation. The starting portfolio is to be chosen between an empty one or among the listed ones. By clicking on the "Add" button on the bottom, it is possible to add a new portfolio with a new associated margin limit through the following window.
- **Portfolio Definition:** it shows the composition of the selected portfolio.
- **Positions Delta List:** it lists the positions to be considered as part of the starting portfolio for the What If computation of the new Margin value. By clicking on the "Add Delta Portfolio" button on the bottom, it is possible to modify the Positions Delta List through the following window.

# User Guide

August 2020

The following steps should be performed:

## Share/Derivatives – Custom section

1. Select the Market from the related combobox;
2. Select the Symbol from the related combobox;
3. Select the Product Group from the related combobox;
4. Select the Product Type from the related combobox;
5. Select the positions to be added in the Positions Delta List by double clicking on them;
6. In the Position Delta List table, for each position, select Account Type, Sub Account, Volume, and Long/Short from the related combobox;
7. Click the Add button at the bottom of the window;
8. Click the Calculate Margin Limit button at the bottom of the previous window to calculate the new margin value.

## Bond section

1. Select the positions to be added in the Positions Delta List by double clicking on them;
2. In the Position Delta List table, for each position, select Market, AbiCode, AccountType, Quantity, Price, Long/Short, TradeType, RepoRate, TermSettlementDate and SpotSettlementDate from the related combo/free text boxes;

## 10.0 Tools

This menu allows to access the Monitor, the Intraday Margin Calls, the Sop Button, the Clearing Message and the Notifications windows.

### 10.1 Monitor

The Monitor windows shows in real time the list of clearing events previously subscribed by the user. This window is automatically opened by the GUI after the login and show any event generated from that moment on related to the member. For General Clearing Members, also Non-Clearing Members events are shown. New events are automatically shown as soon as they are managed by the clearing system, without having to manually refresh the window.

By default, only a subset of clearing events are subscribed for the notification. The user could customize the list of events to be shown in this window by clicking the *Settings* button in the toolbar.

The *Settings* button allows the user to select which clearing events to be shown in the Monitor window. It's also possible to select the *Always Show on Top* and the *Open at Startup* options. To enable any change, the user should click the *Ok* button.

The *Clear Messages* button allows to clear the Monitor window deleting all the listed events.

Clicking on any event in the Monitor window will open the corresponding window of the GUI where the information of that event is displayed.

---

# User Guide

August 2020

It's possible to change the colors of the events by clicking on the *Background* button in the toolbar. It's possible to define a color for every type of clearing event.

Table columns description:

Time	Timestamp of the reception of the clearing event message
Event	Description of the clearing event

## 10.2 Intraday Margin Call

This window shows the requests of additional intraday margins issued by the clearing system to the participant.

This window will be automatically shown when a new intraday margin call will be required by the clearing system to the clearing member or to one of its NCMs. In this case one tab for each NCM will be shown.

Table columns description:

Sequence Number	Identifier of the request
Date	Date of the request
Account Type	Account Type
Initial Margin	Initial Margin
Variation Margin	Variation Margin
Premium Margin	Premium Margin
Net Margin	Net Margin
Asset	Guarantees Amount

---

# User Guide

August 2020

Requested amount	Requested Amount
Percent Variation	Percent Variation
Margin Call Type	Margin Call Type

## 10.3 Stop Button

This window allows a GCM to suspend one of its NCMs in the SOLA Trading System on the selected Market and to inactivate all its active orders on that market. The user should click on the tab of the corresponding market, right click on the row of the NCM he would like to suspend and click "Disable". The new trading status of the NCM will be shown in the Status table. It's possible to re-activate the clearing member right clicking on the corresponding row and selecting "Enable". It is possible to suspend the NCM on a selected market only once per day. The Stop Button window can be accessed only by GCMs. Currently the Stop Button functionality is active only on IDEM, IDEX and AGREX markets.

Table columns description:

ABI Code	Clearing Member Identification Code for the Clearing system
Description	Member name
Mnemonic	Alphanumeric code
Market	Trading Market
Type	Member type (Individual Clearing member, Non-Clearing member, General Clearing member)
Status	Trading Status of the member Active = the clearing member is active on the selected market Inactive = the clearing member is not active on the selected market Unknown = the trading state of the clearing member is not available Missing Link = the stop button functionality is not active for the clearing member on the selected market (i.e. for MTA, MTS, MOT, ICSD markets)

# User Guide

August 2020

## 10.4 Clearing Message

The Clearing Message window shows in real time the list of clearing messages sent by CC&G. This pop-up is automatically opened when a new message is received. New events are automatically shown as soon as they are managed by the clearing system, without having to manually refresh the window.

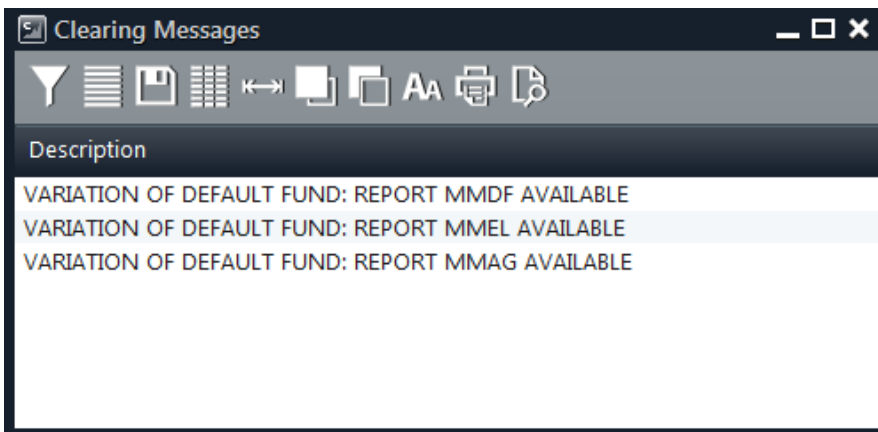

Table columns description:

Description	Message description
-------------	---------------------

## 10.5 Notifications

This window grants clearing members to receive notifications on their clearing activities via mail. In particular it allows to receive an email when:

- An intraday margin call is raised. The email is triggered each time a `NotifySubIntradayMarginCallsSent` event occurs
- When the member is assigned for at least on one product. The email is triggered one time a `NotifySubAssignmentsSent` event occurs
- CC&G disseminate a clearing message. The email is triggered each time a `NotifyClearingMessages` event occurs

# User Guide

August 2020

- When a monitored portfolio exceeds its limit thresholds. The email is triggered each time the limit thresholds is overcome.

The mail subject is the same for all the mails: "CC&G BCS Notifications". The notification window is composed by two sections tables:

- *Emails Config*: lists the current emails set, right clicking on the email box is possible to insert, change or delete the email address. New values will be stored after the pressure of the Save button.
- *Notify Config*: allow to set up a notification, right clicking on the drop down menu is possible to subscribe an event. Into the table is possible to link the emails contained into the Emails Config table to the events. The enable flag allows to enable or disable the subscription without deleting the row. Left clicking on the row a delete button appears, thanks to it is possible to delete the row. New rules are in place only after the pressure of the Save button.

## 11.0 Appendix A – Regular Expressions

A regular expression is a string (sequence of characters) built with a proper syntax, which express characteristics shared by a set of strings.

Assume you intend to use a notation to indicate all the strings which begin by 'a' and end by 'o': we will write 'a\*o' to indicate all these strings which share the characteristic to start by 'a' and end by 'o'. The following strings belong to the set mentioned above 'ao', 'ago', 'also' but not 'aristotelis' or 'psycho'. The character '\*' used into the regular expression indicate whatever sequence of characters.

Let's see the syntax to be used for regular expressions and the meaning of each abbreviation:

x	"x" character
[]	Finds a single character into the brackets. For instance,[abc] looks for an 'a', a 'b' or a 'c'. [a-z] is an interval and finds every small character of the alphabet. Mixed cases can occur: [abcq-z] looks for b, c, q, r, s, t, u, v, w, x, y, z, just as [a-cq-z].
[^]	Finds every small character not included into the brackets. For instance, [^abc] finds all the characters different than "a", "b", o "c". [^az] looks for every character different than small letter
^	Indicates the beginning of the string
\$	Indicates the end of the string
()	Define a sub expression
X?	X which recurs 0 or one time
X*	X which recurs 0 or several times
X+	X Which recurs at least once
X{n}	X which recurs twice exactly
X{n,}	X which recurs at least n times
X{n,m}	X which recurs at least n times and no more than m times
XY	X followed by Y

---

# User Guide

August 2020

X Y	X or Y
-----	--------

X and Y are regular expressions

Some examples follows:

$[ab]^*$  = all the strings which start by a or b

$[\wedge a-c]^*a\$$  = all the strings which start by "a", "b" e "c" but which end by "a"

$*s\{2\}^*$  = all the strings which have two "s" at any point of the sequence

$*cu(t|p)$  =strings which end by "cut" and "cup"
