Revision History

| Date | Version | Description | Author |
|-----------------|------------|---|----------------|
| Apr 2021 | 6.4 | Added revision History Trades availability up to T + 10 Euronext rebranding | Borsa Italiana |
| May 2021 | 6.5 | Added Retention of uncompleted transfer details Section 5.2 and 5.22 | Borsa Italiana |
| <u>Sep 2021</u> | <u>6.6</u> | Updated screenshots on "7.4 What If" | Borsa Italiana |

This section introduces the BCS GUI application main features and provides with basic information aimed at its correct use.

1.1About BCS

BCS is a GUI application allowing a clearing member to execute clearing operations on Derivatives products. It allows also inquiries and risk management functionalities on Bonds and Equities products.

The application allows to:

- Receive trades executed by members in real time and their own non-clearing members in the current trade date and in the last trading days
- • Perform transfer, split, open/close and client code change operations
- • View the history of a specified trade
- • Receive positions in real time and perform rectify, transfers, subaccount change and exercise operations
- • Manage exercise and assignments operations
- • Manage expiry operations
- Access a set of Post Trade Risk Management functionalities on Positions, Trades and Margins
- •
- • Download clearing reference data
- • Receive intraday margin calls and messages from the clearing system
- • View deposited guarantees
- • Retrieve and save settlement reports provided by the clearing system
- • Receive notifications on clearing activities via mail

1.2Work environment

BCS is based on a client-server architecture: the server layer is located at one of the group server farms and connected to the Clearing system and markets through their network access points. On the other hand, the client layer should be installed on the clearing members' work environment.

BCS GUI is the comprehensive solution for all clearing functionalities. The electronic platform supporting the client application is structured to make its access independent from the technical frame features of central systems.

1.3How to get started

In order to access to the clearing services through BCS, the user needs a login name, a password and a Member Code. These data have to be requested to Borsa Italiana.

BCS GUI can be downloaded from the Borsa Italiana website (www.borsaitaliana.it) and installed on one or more members' PCs. The BCS GUI needs Java Virtual Machine V.1.6 or higher. A compatible version of the JVM will be installed during the setup process of the BCS GUI.

The client can be used to reach production (PDC/SDC) or test environment (CDS). By default the Client will point to the production environment. The user can select the desired environment at the startup in the login window.

Before starting the application, is warmly suggested to the user to uninstall any previous version of the BCS GUI and to test the connectivity from the local desk to the BCS application servers. This involves the following steps:

- • close the BCS GUI if running;
- • verify with the customer network department if a natted IP address is used to reach the BCS application servers instead of the real addresses
- If the real IP address is used:
- go into the BCS GUI installation directory (usually C:\Program Files\Borsa Italiana\BCS Client XXX\) and locate the GKApi_J_Version.xml" file in the "etc\Server" directory.
- verify that the file contains the real IP addresses of the BCS application servers; the IP address should be specified in the "TCP_IP" tag of each application server

• • if the telnet does not work, please verify with the customer network department if the telnet attempt is filtered by any internal firewall;

If a natted IP address is used:

- go into the BCS GUI installation directory (usually C:\Program Files\Borsa Italiana\BCS Client XXX\) and locate the GKApi_J_Version.xml" file in the "etc\Server" directory;
- change the file replacing the real IP addresses with the natted ones; the IP address should be specified in the "TCP_IP" tag of each application server

</SERVER>

- • save the file
- telnet the natted IP addresses and ports from the user local PC;
- • if the telnet does not work, please verify with the customer network department if the telnet attempt is filtered by any internal firewall;

Please notice: the user is not allowed to put chars ';' and '=' in free fields; otherwise an error message will be shown on the GUI.

1.4Disaster Recovery Invocation

In case of Disaster Recovery invocation, in order to correctly reach the SDC application servers, the user should restart the BCS GUI and select "SDC" in the environment field of the login window.

1.5Clearing calendar

The CommonApplication.config configuration file, in the \etc\client directory, allows the user to define bank holidays rules for the current year.

An example of the holiday configuration file is shown hereafter:

8

HOLIDAYS=*SUNDAY;*SATURDAY;01/01;\$EASTER;\$EASTER+1;\$EASTER-1;\$EASTER-2;01/05;15/08;\$CHRISTMAS;\$CHRISTMAS+1;\$CHRISTMAS-1;31/12

Where:

- "; " = Field separator character
- *SUNDAY = every Sunday of the year
- *SATURDAY = every Saturday of the year
- \$EASTER = Easter date
- \$CHRISTMAS = Christmas date
- \$EASTER +/- n° = Easter + or specific number of days
- \$CHRISTMAS +/- n° = Christmas + or specific number of days
- dd/mm = specific date of the year

1.6Login

In order to access the BCS clearing system, the login procedure should be correctly completed by the user. Username, Password and Member Code should be specified in the corresponding fields of the login window. The user should specify the environment he would like to login before clicking the Login button.

- PDC: Production environment
- CDS: Test environment

At the first login the password change is required.

1.7Change Password

It's possible to change the password clicking on *Change Password* in the File menu. The following window will be shown.

| 🔄 Change password | _ × |
|---------------------|----------------------------|
| - | CC&G A EURONEXT COMPANY |
| Username | TestUser |
| Member Code | 9500 |
| Environment | PDC |
| Password | |
| New password | |
| Retype new password | |
| | Ok Reset |

The following steps should be performed:

1. Insert the current password in the *Password* field;

Insert the new password in the *New Password* and in the *Retype new password* fields;
 Press the *OK* button to confirm.

A confirmation message will be shown informing that the transaction has been correctly sent.

2.1Main Menu

After the user has been authenticated, the BCS Main Menu will be shown on the screen. The Windows bar on the upper side of the Main Menu shows the username and the environment the user is connected to. The Main Menu is made up of two sections: Menu Bar and Active Windows Bar.

| BCS [3 | 045\ANDREA of | 1 ISERNIA NUOV | oj | | | | | | | — × |
|--------|---------------|----------------|--------|----------------------|------------|-----------------|--------|-------|------|-----|
| File | Archives | Positions | Trades | Exercise/Assignments | Guarantees | Risk Management | Report | Tools | Help | ۰ |
| Monito | r Positions | | | | | | | | | |

2.1.1 Menu Bar

The Menu Bar contains the following menus and commands:

File

| Menu | Description |
|------------------|---|
| Login | Shows the login prompt |
| Settings | Allows to access the main settings of the BCS application |
| Save Environment | Saves the windows configuration |
| Change Password | Changes the current password |
| Exit | Performs the logout |

Archives

| Menu | Description |
|----------------------|--|
| Markets | List of the available markets |
| Classes | List of the classes |
| Tradable Series | List of the tradable series |
| Participants | Clearing members list |
| Non-Clearing members | List of own non-clearing members (for GCM only) |
| Sub Accounts | Configuration/management of secondary accounts for every clearing member |
| Automatic Give-up | Configuration/management of client codes for automatic give-up functionality |

Positions

| Menu | Description |
|----------------|--|
| Positions | Allows to manage positions registered in the clearing system. It is possible to see the list of open positions and access the functions of Rectification, Transfer, Subaccount Change and Early Exercise. It's also possible to add positions to Custom Portfolios for Risk Management activities |
| Massive Upload | Allows to upload an xls, csv, or xml file including a list of clearing operations to be massively executed in the clearing system. |

Trades

| Menu | Description |
|----------------|---|
| Trades | Allows to manage executed trades registered in the clearing system. It is possible to see the list of trades, the history of a single trade and access the functions of International Give-Up, Trade Transfer, Split, Open/Close Change and Client Code Change. |
| Massive Upload | Allows to upload an xls, csv, or xml file including a list of clearing operations to be massively executed in the clearing system. |

Exercise/Assignments

| Menu | Description |
|---|---|
| Early Exercise | Allows to access the function of Early Exercise Request. |
| Expiry Exercise (Exercise By Exception) | Allows to access the function of Exercise By Exception (Ex By Ex) and see the list of exercises at expiry proposed by the clearing system. |
| Exercise Request History | List of Early Exercise Requests and Expiry Exercises (Exercise By Exception) Requests sent to the clearing system by the clearing member (and its NCM's). |
| Assignments | List of Assignments received by the clearing system for the clearing member (and its NCM's). |

Risk Management

| Menu | Description |
|--------------|--|
| Trades Limit | Allows to manage the list of trade limits of the clearing member (and its NCM's) and it shows the alarms list. |

| Menu | Description |
|-----------------|---|
| Positions Limit | Allows to manage the list of position limits of the clearing member (and its NCM's) and shows the limit values of the current business day. |
| Margin Limits | This function will be soon available. Allows to manage the list of portfolios of the clearing member (and its NCM's) and shows the margin limit values for the current business day. |
| What If | This function will be soon available. Allows to calculate in advance the margin amount that the clearing system will ask to the member in case of a change on a the current open positions. |

Guarantees

| Menu | Description |
|-----------------------|-------------------------------|
| Collateral guarantees | List of Collateral guarantees |
| Deposited guarantees | List of Deposited guarantees |

Report

| Menu | Description |
|--------|------------------------------------|
| Report | List of available clearing reports |

Tools

| Menu | Description |
|-----------------------|---|
| Monitor | Shows the main activities of the clearing member (and its NCM's) in real time |
| Intraday Margin Calls | Intraday margins requested by CC&G |
| Stop Button | Allows to suspend or re-activate NCMs on the SOLA Trading System |
| Notifications | To receive notifications via email on the clearing activities |

The menu bar also contains two status lights:

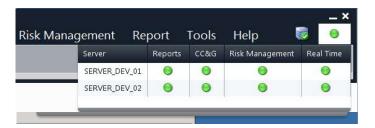

i. BCS Server Connection Status

It shows the connection status of the BCS GUI to the BCS application servers (green/red)

2. BCS Server Components Status

It shows the status of the BCS server components (green/red).

- If the Reports component is not available (red), clearing reports file could not be downloaded; any update about the reports availability will not be sent to the user. Any other clearing function will be available;
- If the CC&G component is partially unavailable (yellow), it will not be possible to submit transactions to the clearing system; historical data could not be downloaded; the trade history function will not be available;
- If the CC&G component is totally unavailable (red), it will not be possible to submit transactions to the clearing system; real time updates will not be available; historical data could not be downloaded; the trade history function will not be available; clearing reports will be available;
- If the Risk Management component is not available (red), it will not be possible to receive alarms and margin values updates and it will not be possible to change the limit and portfolios definition. Any other clearing function will be available;
- If the Real Time component is not available, it will be possible to send submit transactions to the clearing system, anyway data shown in the GUI may not be updated;
- If the Stop Button component is totally unavailable (red), the connection with SOLA trading system is down so it will not be possible to change the NCM's trading status; any other operation that is not associated with Stop Button will be available;

2.1.2 Active Windows Bar

This bar shows a button for every active window of the GUI. Clicking on a button will open the corresponding window.

2.2Windows layout

This section describes the layout of the BCS windows and the basic functions which can be executed in order to manage, sort, filter and export data.

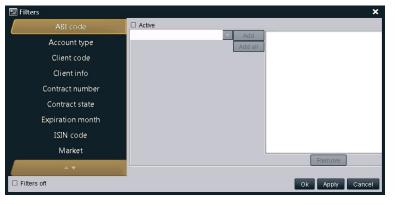

2.2.1 Toolbar

The main windows of the BCS GUI have a toolbar on the top which contains a basic set of functions.

Y

The *Filter* button allows to enable a set of background filters on the displayed data. Where allowed, regular expressions can be used (See Appendix A: Regular Expressions).

The *Select All* button allows to select all the rows of the table.

The Save button allows to export the content of the table into a Microsoft Excel file or to an ASCII/PDF file.

The *Customize* button allows to select which columns to show in the table and in which order. It's possible to select which columns have to be shown in the fixed part of the table moving them over the red slider.

| Visible columns | | | Hidden columns | |
|----------------------|----------|------------|----------------|--|
| S ABI code Market | Î | | | |
| Trade date | | | | |
| 🖾 Made date | | << Add all | | |
| 🖾 Side | | 00000 | | |
| 🗆 Trade price | _ | < Add | | |
| 🔲 Quantity | | Add > | | |
| 🔲 Contract state | | | | |
| Account type | | Add all >> | | |
| 🔲 Sub account | | | | |
| 🔲 Series name | v | | | |
| Move up Move dow | 115 | | | |

The *Autofit* button allows to automatically resize the columns width in order to fully show the data contained in the cells of the table.

The *Foreground* button allows to select the foreground color of the rows of the table

The $\ensuremath{\textit{Background}}$ button allows to select the foreground color of the rows of the table

The Font button allows to select the font of the data displayed in the table

The Print button allows to print the data of the table. Only data shown on the screen is printed: hidden columns, if any, or filtered data will not be printed.

The *Print Preview* button allows to have a preview of the data before it will be printed

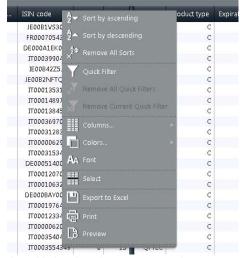

Tue 01/13/2015 +

2.2.2 Business Date Bar

A Business Date Bar is present in the windows of the BCS GUI where previous days data are available. By default, the current business day is selected. In order to download data from a specific business date, the user should click on the "+" button next to the current business day tab and select the date of interest (up to T+10). A new tab will be shown in the bar, allowing to download data of the selected business date and to access the other clearing functionalities. It's possible to switch between any active tab of the Business Date Bar in any time. Any tab will be automatically updated in case of a change on the displayed data, even if the tab is active in background.

2.2.3 Table functions

It's possible to access a basic set of functions for the data management right clicking on

the table header of every BCS window.

| ₽ | |
|--|---|
| | The Sort By Ascending button allows to sort the data of the column in ascending order. |
| AZA | The <i>Sort By Descending</i> button allows to sort the data of the column in descending order. |
| $\overset{a}{\times}^{2^{\diamondsuit}}$ | The <i>Remove All Sorts</i> button allows to remove any sort previously defined on any column of the table. |
| Y | The <i>Quick Filter</i> button allows to filter the rows of the table basing on a value of the selected column. |
| $\mathbf{x}_{\mathbf{x}}$ | The <i>Remove All Quick Filters</i> button allows to remove any filter previously defined on any column of the table. |
| × | The <i>Remove Current Quick Filter</i> button allows to remove a filter previously defined on the selected column of the table. |
| | The <i>Columns</i> button allows to access a submenu with the following functions: <i>Hide Column, Customize, Autofit Column</i> and <i>Autofit All</i> . |
| • | The <i>Colors</i> button allows to access a submenu with the following functions: <i>Background</i> and <i>Foreground</i> |
| Aa | The Font button allows to select the font of the data displayed in the table |
| | The Select button allows to select all the rows of the table basing on a value of the selected column |
| | The <i>Export to Excel</i> button allows to export the content of the table into a Microsoft Excel file. |
| ŀ | The Print button allows to print the data of the table. Only data shown on the screen is printed: hidden columns, if any, or filtered data will not be printed. |
| | |
| | |

The *Print Preview* button allows to have a preview of the data before it will be printed

2.3Saving and closing windows

The Save Environment function, in the File menu of the Main Menu, allows to save the windows current configuration (i.e. filters, characters, colors, sort criteria, etc...).

The configuration is saved before closing and exiting the BCS client.

This menu allows users to access clearing reference data like available markets, product classes, tradable series and clearing members. It allows also to manage sub accounts and automatic give-up codes.

3.1Markets

The Markets window shows the information concerning the markets to which the member belongs to.

| | /larkets | | _ = × |
|----|----------|------------|--|
| Y | | III + | l 🗖 🗛 🖶 🖟 |

The value "Assigned by Trader" in the "Open\Close" field will assign to the incoming trade the same value specified for it by the trader.

4POSITIONS

This menu allows members to manage positions registered in the clearing system. It is possible to see the list of open positions and access the functions of Rectification, Transfer, Subaccount Change and Early Exercise. It's also possible to add positions to Custom Portfolios for Risk Management activities and to upload some file that including a list of clearing operations to be massively executed.

The Positions menu is made by the following tabs:

- Positions List: it shows the list of open positions of the clearing member (and its NCM's) and allows to access the functions of Rectification, Transfer, SubAccount Change, Early Exercise Request and Add to Portfolio;
- Rectify: it shows the rectified positions of the clearing member (and its NCM's);
- Transfers: it shows the position transfers (delivered and received) of the clearing member (and its NCM's); it allows to access the functions of Accept, Reject and Cancel Position Transfer;
- SubAccount Change: it shows the list of SubAccount Changes of the clearing member (and its NCM's).

The Massive Upload menu is made by a pop-up windows that contains a list of the operations that can be massively used in the clearing system. Position list

This window lists all the positions owned by the member. For General Clearing Members, also Non-Clearing Members positions are shown. New positions are automatically shown as soon as they are managed by the clearing system, without having to manually inquire the clearing system. At the same way, any update on a position (i.e. Position Transfer, SubAccount Transfer, Rectifications, ...) is automatically shown.

4.1.1 Rectify

Rectify allows to increase / decrease positions in options and futures. It's possible to rectify only IDEM, IDEX and AGREX market positions on Client account.

In order to execute a Rectify, the user should select a position from the Positions List, right click on it and select *Rectify*.

| Rectif | y position | | | | | 2. | | × |
|--------|------------|-------------|------|-------|-----|----------|-----------|--------------------|
| Market | ISIN code | Sub account | Long | Short | ABI | Volume | Operation | Transaction result |

| | | | | | | | | |
| - | | | | | > | * | | |
| | - | | | | | | | |
| | | | | | | Ok Close | | |
| | | | | | | | | |

A pop-up will be opened.

The following steps should be performed:

- 1. Insert a value into the Volume field;
- 2. Select the Increase or Decrease option;

3. Press OK button to confirm

A confirmation message informs the user that the transaction has been successfully committed.

4.1.2 Transfer

The Position Transfer allows to transfer an open position to another clearing member. The clearing system processes the transfer request only after the counterpart has accepted the received position.

Through a Position Transfer is also possible to change the account type of a position. This can be done selecting the member itself as receiver of the transfer and selecting the desired account type while accepting the transfer.

The user can access the position Transfer function right clicking on a specified position in the positions list (also multiple selection is allowed).

| I ransi | ter positions | | | | | | . | | | | | | · · · · · · · · · · · · · · · · · · · |
|---------|---------------|-------------|------|---------|-------------|-----|------------|-------------------|-----------------------|------------|------------------|-----------------|---------------------------------------|
| Market | ISIN code | Sub account | Long | Short | ABI code | Ac | Volume | Receiver ABI Code | Receiver member | Long/Short | Rectify position | Additional info | Transaction result |
| DER | JT0012539828 | *OMN | 0 | 1503 | 03045 | | | 00001 | BORSA ITALIANA S.P.A. | Long + | [No •] | | |
| < | - | | | | | > | | | | | | | > |
| | | | | Sar Sar | me receiver | mem | ber Receiv | er member 00001 | BORSA ITALIANA S.P.J | Δ. | - | | |
| | | | | | | | | Clos | e | | | | |

In the Position Transfer pop-up it's possible to enable or disable the "Same Receiver Member" checkbox. Checking this option, it will be possible to specify the same receiver for all the rows in the "Receiver member" listboxes. Unchecking the option, it will be possible to specify a different receiver for each row in the "Receiver ABI Code" and "Receiver member" columns of the table.

In order to send a Position Transfer, the user should select one or more positions from the Positions List, right click on them and select *Transfer*.

The following steps should be performed:

- 1. Insert a value into the Volume field;
- 2. Select Long or Short in the Long/Short option;
- Select Yes or No in the Rectify Position option. Selecting Yes the clearing system will automatically increase the positions in case they are no more available when the receiver clearing member accepts the transfer (i.e. in case of trade executions on the transferred series);
- 4. Insert a value into the Additional Info field (optional);
- 5. Select the Receiver Member specifying the ABI code or the clearing member description;
- 6. Press the OK button to confirm.

A confirmation message will be shown informing that the transaction has been correctly sent.

4.1.3 Sub Account Change

The Sub Account Change allows to change the subaccount of a specific position. At the same time it's possible to rectify the position and assign a part of it to the new sub account.

| 🔄 Sub A | 🗊 Sub Account Changes 🛛 🗶 | | | | | | | | | |

| Market | ISIN code | Sub ac | Volume | Long/Short | Rectify position | Sub account | Additional info | Transaction result | | |
| DER | ποο11571418 | | | Long 🔸 | ₩0 - | | | | | |
| < - | | > | < | | | | | > | | |
| | | | | | Close | | | | | |

In order to perform a Sub Account Change, the user should select a position from the Positions List, right click on it and select *Sub Account Change*.

The following steps should be performed:

- 1. Insert the number of positions to be transferred into the Volume field;
- 2. Select Long or Short in the Long/Short option;
- Select Yes or No in the Rectify Position option. Selecting Yes the clearing system will automatically increase the positions in case they are no more available when the receiver clearing member accepts the transfer (i.e. in case of trade executions on the transferred series);
- 4. Select the new Sub Account of the position in the Sub Account option;
- 5. Insert a value into the Additional Info field (optional);
- 6. Press the OK button to confirm.

A confirmation message will be shown informing that the transaction has been correctly sent.

4.1.4 Early Exercise Request

The Early Exercise Request allows to send early exercise requests to the clearing system.

In order to send an Early Exercise Request, the user should select a position from the Positions List, right click on it and select *Early Exercise Request*.

| 🗐 Exercise ree | quest <u> </u> |
|-----------------|---------------------------------------|
| Market Id | IDEM - ITALIAN DERIVATIVES MARKET 🛛 👻 |
| ABI code | 92003 - |
| ISIN code | IT0010879333 - Select Mode |
| Serie name | ENI5F11 Symbol |
| Account type | ○ н о с |
| Sub account | *OMN ~ |
| Quantity | |
| Exercise type | Early exercise - |
| Additional info | |
| | Insert Cancel |

The following steps should be performed:

- Insert the number of positions to be early exercised into the Quantity field; the quantity field is limited to four digits. In order to early exercise a quantity with more than four digits, the user should send more than one request, to cover the whole amount of positions to exercise;
- 2. Insert a value into the Additional Info field (optional);
- 3. Press the Insert button to confirm.

The list of early exercise requests sent can be verified in the Exercise/Assignments main menu, in the Exercise Request History sub-menu

Please notice

An early exercise can be executed also in the **Early Exercise (By Positions)** and **Early Exercise (By Series)** windows, which can be reached through the **Exercise/Assignments** main menu.

4.2Rectifications

This window lists all the position rectifications of the member. For General Clearing Members, also Non-Clearing Members rectifications are shown. The window lists the rectifications executed on the current business date. New rectifications are automatically shown as soon as they are managed by the clearing system, without having to manually refresh the window.

In order to have access to previous days rectifications, it's possible to click on the "+" button on the Business Date Bar and select the date of interest.

A new tab will appear in the Business Date Bar. The user should select the Market field and click on the Download button. Rectifications that match the specified criteria will be displayed.

4.3Transfers

This window lists all the Position Transfers of the member. For General Clearing Members, also Non-Clearing Members transfers are shown. The window lists the transfers executed on the current business date. New transfers are automatically shown as soon as they are managed by the clearing system, without having to manually refresh the window. At the same way, any update on a transfer (i.e. transfer status changed) is automatically shown.

The window is composed by two tables: the *Transferred Positions* and the *Received Positions*. The *Transferred Positions* table shows all the transfers sent by the member to other clearing members or to the member itself. The *Received Positions* table shows all the transfers received by the member. The color of the row identifies if the request has been accepted by the receiver clearing member (green row), has been refused (red row), is still pending (yellow row), or has been cancelled by the member (white row).

In order to have access to previous days transfers, it's possible to click on the "+" button on the Business Date Bar and select the date of interest.

A new tab will appear in the Business Date Bar. The user should select the Market field and click on the Download button. Transfers that match the specified criteria will be displayed.

The color of the row shows the transfer status, according to the following table:

| Color | Status | Description |
|--------|-----------|---|
| Green | Processed | The receiver accepted the transfer. The position is now owned by the receiver. |
| Red | Rejected | The receiver rejected the transfer. The position is still owned by the sender. |
| Yellow | Holding | The receiver didn't accept (or reject) the transfer yet. The position is still owned by the sender. |
| White | Cancelled | The sender cancelled the transfer request before the receiver accepted or rejected it. The position is still owned by the sender. |

| | |

4.3.1 Cancel Transfer Request

Pending position transfers with status H (Holding) can be cancelled by the deliver member. The user should right click on the pending transfers in the *Transferred Positions* table and select *Cancel Transfer Request*. The following steps should be performed:

1. Press OK button to confirm

A confirmation message will be shown informing that the transaction has been correctly sent.

4.3.2 Confirm Transfer Request

Pending position transfers with status H (Holding) can be accepted (confirmed) by the receiver member. The user should right click on the pending transfers in the *Received Positions* table and select *Confirm*.

The transfer will be executed by the clearing system only after the user accepts the received position. Received positions can be allocated on house or client account. If the transfer is accepted, the color of the row gets green as soon as the transfer is executed by the clearing system; the red row confirms instead that the transfer request has been rejected by the user.

The following steps should be performed:

- 1. Select Open or Close in the Open/Close option;
- 2. Select Client or House in the Receiver Account Type option;
- 3. Select the Sub Account in the Sub Account option;
- 4. Insert a value into the Receiver Client Code field (optional);
- 5. Insert a value into the Receiver Client Info field (optional);
- 6. Press OK button to confirm

A confirmation message will be shown informing that the transaction has been correctly sent.

4.3.3 Reject Transfer Request

Pending position transfers with status H (Holding) can be rejected by the receiver member. The user should right click on the pending transfers in the *Received Positions* table and select *Reject*.

The following steps should be performed:

1. Press OK button to confirm

A confirmation message will be shown informing that the transaction has been correctly sent.

4.4Sub Account Changes

This window lists all the sub account changes of the member. For General Clearing Members, also Non-Clearing Members changes are shown. The window lists the sub account changes executed on the current business date. New changes are automatically shown as soon as they are managed by the clearing system, without having to manually refresh the window.

In order to have access to previous days sub account changes, it's possible to click on the "+" button on the Business Date Bar and select the date of interest.

A new tab will appear in the Business Date Bar. The user should select the Market field and click on the Download button. Sub Account Changes that match the specified criteria will be displayed.

4.5 Massive upload

The Massive Upload function allows to massively execute a list of clearing operations through the upload of a file. It is possible to massively execute the following operations:

- Position Transfer;
- Position Rectification;
- SubAccount Change.

The Massive Upload is available clicking on "Positions->Massive Upload" in the BCS Main Menu.

| 🔄 Positions Massive Upload 🛛 📃 | × |
|---|---|
| Please, upload a file (xls, .cvs or .xml) containing the clearing operations to be executed in the clearing system. | |
| Transfers | |
| Browse Upload | |
| Click here to download the Transfers template file | |
| Rectifications | ٦ |
| Browse | |
| Click here to download the Rectifications template file | |
| Sub Account Changes | ٦ |
| Browse Upload | |
| Click here to download the Sub Account Changes template file | |
| | |

In this pop-up it's possible to select an .xls, .csv or .xml file to upload into the BCS Clearing system. Clicking on the link "Click here to download...", the user could download a zip file containing a template file for each format (.xls, .csv and .xml) with all the fields empty. A set of templates is available for each function. Only these files are accepted by the system. It is possible to upload just one file at the time (i.e. a file for the Transfers) that contains max 1000 rows. If the total number of rows in the file exceeds the limit, an error will be shown and the process will be interrupted.

As soon as the Upload button is clicked, the file will be sent to the BCS Server and the pop-up will be closed.

The BCS server performs an automatic parsing in order to collect all the available fields from the file. The following fields are mandatory for the functions described above:

For Position Transfers:

- Long/Short
- Volume
- ReceiverABiCode

- RectifyPosition
- AccountType
- ISINCode
- ABICode
- SubAccount

• AdditionalInfo For Rectifications:

- ABICode
- AccountType
- ISINCode
- Operation
- Volume
- SubAccount

For Sub Account Changes:

- AbiCode
- AccountType
- OriginalSubAccount
- IsinCode
- Volume
- Long/Short
- AdditionalInfo
- SubAccount
- RectifyPosition

At the end of the process, a pop-up will be shown, listing all the rows in the file. In case one of the rows of the file is not correct (i.e. in case one of the mandatory field is not specified), the corresponding row will be shown in red in the pop-up. The transaction result column will detail the cause of the error (i.e. "Missing ABICode field").

In the Position Transfers pop-up it's possible to enable or disable the "Same Receiver Member" checkbox. Checking this option it will be possible to specify the same receiver for all the rows in the "Receiver member" listboxes. Unchecking the option, it will be possible to specify a different receiver for each row in the "Receiver ABI Code" and "Receiver member" columns of the table.

This menu allows to manage executed trades registered in the clearing system. It is possible to see the list of trades, the history of a single trade and access the functions of International Give-Up, Trade Transfer, Split, Open/Close Change and Client Code Change.

The Trades menu is made by the following tabs:

- Trades List: it shows the trades of the clearing member (and its NCM's) and allows to access the functions of International Give-Up, Trade Transfer, Split, Open/Close Change and Client Code Change;
- Transfers: it shows the trade transfers (delivered and received) of the clearing member (and its NCM's); it allows to access the functions of Accept, Reject and Cancel Trade Transfer;
- Splits: it shows the splits of the clearing member (and its NCM's);
- Open/Close Changes: it shows the Open / Close Changes of the clearing member (and its NCM's);
- Client Code Changes: it shows the Client Code Changes of the clearing member (and its NCM's);
- Trade History: it shows all the clearing operations performed on the selected trade.

5.1Trade list

This window lists all the trades owned by the member. For General Clearing Members, also Non-Clearing Members trades are shown. The window lists the trades of the current business date. New trades are automatically shown as soon as they are managed by the clearing system, without having to manually refresh the window. At the same way, any update on a trade (i.e. Client Code Change, Open / Close Change, Split, International Give Up, Trade Transfer, ...) is automatically shown. A trade is automatically removed from the Trades List after a transfer to another clearing member or after a split. In this case the row is shown in red and after a few seconds it is removed (during this phase the contract state value is R (Reversing)).

| Market Trade Source | Market Source of the trade. This field is populated only for derivatives markets. |

5.1.1 International Give up

The International Give Up allows to send one or more trades to another clearing member. The transfer is performed at the execution price. The settlement of the variation margins (or the premium as well) is performed accordingly. Only the clearer has to deposit initial margins. The clearing system processes the transfer request only

after the counterpart has accepted the received trade. This function is available only on T trades. It is possible to transfer trades only to counterparts other than the member itself. Only the overall amount of trade can be transferred.

| | | | | | | | | · | | | | |

In order to send an International Give up, the user should select one or more trades from the Trades List, right click on them and select *International Give-Up*.

The following steps should be performed:

- 1. Select Yes or No in the Rectify Position option. Selecting Yes the clearing system will automatically increase the positions in case they are no more available when the receiver clearing member accepts the transfer (i.e. in case of trade executions on the transferred series);
- 2. Insert a value into the Additional Info field (optional);
- Select the Receiver Member specifying the ABI code or the clearing member description;
- 4. Press the OK button to confirm.

A confirmation message will be shown informing that the transaction has been correctly sent.

In the International Give-Ups pop-up it is possible to enable or disable the "Same Receiver Member" checkbox. Checking this option it will be possible to specify the same receiver for all the rows in the "Receiver member" list boxes. Unchecking the option it will be possible to specify a different receiver for each row in the "Receiver ABI Code" and "Receiver member" columns of the table.

5.1.2 Trade Transfer

The Trade Transfer allows to send one or more trades to other clearing members or to the member itself. The transfer is performed at the execution price. The settlement of the variation margins (or the premium as well) is performed accordingly. Only the clearer has to deposit initial margins. The clearing system processes the transfer request only after the counterpart has accepted the received trade. This function is available on all trades between T+1 and T+10. Only the overall amount of trade can be transferred.

Through a Trade Transfer is also possible to change the account type of a position. This can be done selecting the member itself as receiver of the transfer and selecting the desired account type while accepting the transfer.

In order to send a Trade Transfer, the user should click on the "+" button on the Business Date Bar and select the T+1 (until T+10) date. A new tab will appear in the Business Date Bar. The user should select the Market, the Account Type and the Side fields and click on the Download button. Trades that match the specified criteria will be displayed. The user should select one or more trades from the Trades List, right click on them and select *Trade Transfer*.

The following steps should be performed:

- Select Yes or No in the Rectify Position option. Selecting Yes the clearing system will automatically increase the positions in case they are no more available when the receiver clearing member accepts the transfer (i.e. in case of trade executions on the transferred series);
- 2. Insert a value into the Additional Info field (optional);
- 3. Select the Receiver Member specifying the ABI code or the clearing member description;
- 4. Press the OK button to confirm.

A confirmation message will be shown informing that the transaction has been correctly sent.

In the Trade Transfer pop-up it is possible to enable or disable the "Same Receiver Member" checkbox. Checking this option it will be possible to specify the same receiver for all the rows in the "Receiver member" list boxes. Unchecking the option it will be possible to specify a different receiver for each row in the "Receiver ABI Code" and "Receiver member" columns of the table.

5.1.3 Split

The Split allows to separate any trade into a set trades (up to 8), each one having a different volume amount. The total amount of the separated trades should be equal to the volume of the original trade.

This function is allowed on all trades between T and T+10.

In order to execute a Split, the user should select a trade from the Trades List, right click on it and select *Split*.

A pop-up will be opened, showing in the higher part the current trade and in the lower part the trades that will be created after the split.

The following steps should be performed:

- Insert a value into the Quantity field in both the rows of the New Trades table. In case more than two trades should be generated from the split, the total amount should be lower than the quantity of the original trade; in this case, an additional row will be shown in the New Trades table, allowing to specify the Quantity field for another trade. The Remaining Quantity indicator, in the lower part of the window, shows the quantity of the original trade that still needs to be allocated;
- Repeat the insertion of the quantity for each trade that should be generated from the split (up to 8 trades);
- 3. Insert a value into the Client Code field in any row of the New Trades table (optional);
- 4. Insert a value into the Client *Info* field in any row of the *New Trades* table (optional);
- 5. Press the *OK* button to confirm.

A confirmation message will be shown informing that the transaction has been correctly sent.

5.1.4 Open / Close Change

This function is allowed only on T trades.

In order to execute an Open / Close Change, the user should select one or more trades from the Trades List, right click on them and select *Open/Close Change*.

| 🔄 Open/C | lose Char | ige | | | | | × |
|----------|-----------|-----------------|------|---------------|------------|------------------|--------------------|
| ABI code | Market | Contract number | Side | Trade price | Open/Close | Rectify position | Transaction result |
| 95000 | DER | 19325 | В | 23,055.000000 | Open → | No • | |
| < | • | | | > | < | | > |
| | | | | Ok C | ose | | |

The following steps should be performed:

1. Select Open or Close in the Open/Close option;

- 2. Select Yes or No in the Rectify Position option;
- 3. Press OK button to confirm

A confirmation message will be shown informing that the transaction has been correctly sent.

5.1.5 Client Code Change

This function is allowed on all trades between T and T+10.

The Client Code Change allows to change the *Client Code* and the *Client Info* values of one or more trades. This operation could trigger a Sub Account Change or an Automatic Give-Up in case the specified Client Code has been previously created and associated to any of this functionalities (see sections 3.6 and 3.7).

| 🗐 Client C | Code Char | nge | | | | | | × |
|------------|-----------|-----------------|------|---------------|----------|-------------|-------------|--------------------|
| ABI code | Market | Contract number | Side | Trade price | Quantity | Client code | Client info | Transaction result |
| 95000 | DER | 19164 | В | 23,055.000000 | 10 | New Code | New Info | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| < | | | | | > | < | | > |
| | | | | Ok C | ose | | | |
| | | | | OK C | 0.00 | | | |

In order to execute a Client Code Change, the user should select one or more trades from the Trades List, right click on them and select *Client Code Change*.

The following steps should be performed:

- 1. Insert a value into the Client Code field;
- 2. Insert a value into the Client Info field (optional);
- 3. Press the OK button to confirm.

In case multiple trades have been selected, it's possible to insert the same *Client Code* and the same *Client Info* values in all of them at the same time using the copy and paste functionality (CTRL+C; CTRL+V) in the *Client Code Change* window.

5.1.6 Trade History

The Trade History allows to download all the clearing operations done on a selected trade.

In order to access the Trade History, the user should select a trade from the Trades List, right click on it and select Trade History.

A pop-up will be shown, listing each clearing operation performed on the trade:

Table columns description:

| ABI Code | Clearing Member Identification Code for the Clearing system |
|----------|---|
| Market | Trading Market |

| Trade Date | Business Date of the Trade | | | | | |

5.2Transfers

This window lists all the International Give-Ups and Trade Transfers of the member. For General Clearing Members, also Non-Clearing Members transfers are shown. The window lists the <u>transfers received and available (for acceptance or refusal) on the current business date, transfers not accepted on the trade date will be resubmitted</u>

the following day until T+10 until they are accepted or refused by the relevant counterparty. New transfers are automatically shown as soon as they are managed by the clearing system, without having to manually refresh the window. At the same way, any update on a transfer (i.e. transfer status changed) is automatically shown.

The window is composed by two tables: the *Transferred Trades* and the *Received Trades*. The *Transferred Trades* table shows all the transfers sent by the member to other clearing members. The *Received Trades* table shows all the transfers received by the member. The color of the row identifies if the request has been accepted by the receiver clearing member (green row), has been refused (red row), is still pending (yellow row), or has been cancelled by the member (white row).

In order to have access to transfers managed or expired in previous days, it's possible to click on the "+" button on the Business Date Bar and select the date of interest.

A new tab will appear in the Business Date Bar. The user should select the Market field and click on the Download button. Transfers that match the specified criteria will be displayed.

The color of the row shows the transfer status, according to the following table:

| Color | Status | Description |
|--------|-----------|--|
| Green | Processed | The receiver accepted the transfer. The trade is now owned by the receiver. |
| Red | Rejected | The receiver rejected the transfer. The trade is still owned by the sender. |
| Yellow | Holding | The receiver didn't accept (or reject) the transfer yet. The trade is still owned by the sender. |
| White | Cancelled | The sender cancelled the transfer request before the receiver accepted or rejected it. The trade is still owned by the sender. |

Table columns description:

| Deliver Member | Deliver ABI Code |
|-----------------|--|
| Receiver Member | Receiver ABI Code |
| Deliver Name | Deliver Name |
| Receiver Name | Receiver Name |
| Status | Status of the Transfer (H=Holding, P=Processed, R=Rejected, C=Cancelled) |

| Receiver Client Code | Receiver Client Code | | |
| Sub Account | Sub Account | | |
| Quantity | Transfer Quantity | | |
| Transferred/Received | Transfer Type (Transferred / Received) | | |
| Product Type | Product type of the Tradable Series (B = bond, C = equity and fund quotes, F=future, O= option, R = repo, V= convertible, W = warrant) | | |
| Transfer Mode | Transfer Mode (Automatic / Manual) | | |

5.2.1 Cancel Transfer Request

Pending trade transfers with status H (Holding) can be cancelled by the deliver member. The user should right click on the pending transfers in the *Transferred Trades* table and select *Cancel Transfer Request*.

The following steps should be performed:

1. Press OK button to confirm

A confirmation message will be shown informing that the transaction has been correctly sent.

5.2.2 Confirm Transfer Request

Pending trade transfers with status H (Holding) can be accepted (confirmed) by the receiver member. The user should right click on the pending transfers in the *Received Trades* table and select *Confirm*.

The transfer will be executed by the clearing system only after the user accepts the received trade. Received trades can be allocated on house or client account. If the transfer is accepted, the color of the row gets green as soon as the transfer is executed by the clearing system; the red row confirms instead that the transfer request has been rejected by the user.

Please notice: Trades transferred via Automatic Give-Up don't need to be accepted by the receiver member.

International Give-ups not accepted by the end of the day, <u>will be resubmitted the</u> following day until T+10 they are accepted or refused by the relevant counterparty.

The following steps should be performed:

- 1. Select Open or Close in the Open/Close option;
- 2. Select Client or House in the Account Type option;
- 3. Insert a value into the Client Code field (optional);
- 4. Insert a value into the Client Info field (optional);
- 5. Press OK button to confirm

A confirmation message will be shown informing that the transaction has been correctly sent.

5.2.3 Reject Transfer Request

Pending trade transfers with status H (Holding) can be rejected by the receiver member. The user should right click on the pending transfers in the *Received Trades* table and select *Reject*.

The following steps should be performed:

1. Press OK button to confirm

A confirmation message will be shown informing that the transaction has been correctly sent.

5.3Splits

This window lists all the trade splits executed by the member. For General Clearing Members, also Non-Clearing Members splits are shown. The window lists the splits executed on the current business date. New splits are automatically shown as soon as

they are managed by the clearing system, without having to manually refresh the window.

In order to have access to previous days splits, it's possible to click on the "+" button on the Business Date Bar and select the date of interest.

A new tab will appear in the Business Date Bar. The user should select the Market field and click on the Download button. Splits that match the specified criteria will be displayed.

It's possible to cancel any split operation performed on the current day. The cancel feature deletes the split trades and re-create the original trade with the original quantity and the original contract number.

In order to cancel a split, the user should clicks on a row; the GUI will highlight all the rows with the same OriginalContractNumber of the selected one. The user should then right click on one of the highlighted rows and select the option "Cancel Split".

A pop-up will be shown. Clicking the Ok button, the cancel request will be sent to the system.

| ABI Code | Clearing Member Identification Code for the Clearing system |
|--------------------------------|---|
| Market | Trading Market |
| Contract number | Trade Identification Number assigned by the Clearing system Unique Key for a Trade is made by: Contract Number + Side + Trade Date |
| Original Contract Number | Trade Identification Number for the Clearing system before a split. In case of multiple splits, the Contract Number of the last Contract split is shown |
| Series name | Name of the Tradable Series |
| Trade date | Business Date of the Trade |
| Buy/Sell | Side of the Trade (Buy / Sell) |
| Account type | Account Type (House/Client) |
| Quantity | Quantity of the Trade |
| Client info | Optional free text notes |
| Client code | Client Alphanumeric Code |
| Market Contract Number | Trade Identification Number assigned by the Trading System |
| Request Key | Key of the Split |
| Request State | Status of the Split (Processed / Cancelled) |

Table columns description:

5.40pen Close Changes

This window lists all the Open / Close Changes executed by the member. For General Clearing Members, also Non-Clearing Members Open / Close Changes are shown. The window lists the changes executed on the current business date. New Open / Close Changes are automatically shown as soon as they are managed by the clearing system, without having to manually refresh the window.

In order to have access to previous days Open / Close Changes, it's possible to click on the "+" button on the Business Date Bar and select the date of interest.

A new tab will appear in the Business Date Bar. The user should select the Market field and click on the Download button. Open / Close Changes that match the specified criteria will be displayed.

Table columns description:

| Open Close | Open / Close (O = Open, C = Close) |
|------------------------|---|
| Sub Account | Sub Account |
| Market | Trading Market |
| ABI Code | Clearing Member Identification Code for the Clearing system |

| ISIN code | ISIN code of the Tradable Series |
| Series Name | Name of the Tradable Series |
| Quantity | Quantity of the Trade |
| Side | Side of the Trade (Buy / Sell) |
| Market Contract Number | Trade Identification Number assigned by the Trading System. |
| Request Time | Execution Time of the Open / Close Change Request |
| Request Date | Execution Date of the Open / Close Change Request |
| Request State | State of the Open / Close Change Request |
| Return Code | Return Code of the Open / Close Change Request |

5.5Client Code Changes

This window lists all the Client Code Changes executed by the member. For General Clearing Members, also Non-Clearing Members Client Code Changes are shown. The window lists the changes executed on the current business date. New Client Code Changes are automatically shown as soon as they are managed by the clearing system, without having to manually refresh the window.

In order to have access to previous days Client Code Changes, it's possible to click on the "+" button on the Business Date Bar and select the date of interest.

A new tab will appear in the Business Date Bar. The user should select the Market field and click on the Download button. Client Code Changes that match the specified criteria will be displayed.

| Table columns description: | |
|----------------------------|--|
|----------------------------|--|

| Client Code | Client Alphanumeric Code |
|-------------------------|--|
| Original Client Code | Client Code before the Client Code Change |
| Client Info | Optional free text notes |

| Expiration date | Expiration Date of the Tradable Series |
| Strike Price | Strike Price of the Tradable Series |
| Put / Call | Option type (P = Put, C = Call) |
| ISIN code | ISIN code of the Tradable Series |
| Series Name | Name of the Tradable Series |
| Quantity | Quantity of the Trade |
| Request Time | Execution Time of the Client Code Change Request |
| Request Date | Execution Date of the Client Code Change Request |
| Request State | State of the Client Code Change Request |
| Return Code | Return Code of the Client Code Change Request |

5.6 Massive upload

The Massive Upload function allows to massively execute a list of clearing operations through the upload of a file. It is possible to massively execute the following operations:

- 1. Open/Close;
- 2. International Give-Up;
- 3. Trade Transfer;
- 4. Client Code Change.

| 🗐 Trades Massive Upload 🛛 🔍 🗙 |
|--|
| Please, upload a file (xls, .cvs or .xml) containing the clearing operations to be executed in the clearing system. |
| International Give-Up Browse Upload Click here to download the International Give-Up template file |
| Trade Transfers Browse Upload Click here to download the Trade Transfers template file |
| Open/Close Changes Browse Upload Click here to download the Open/Close Changes template file |
| Client Code Changes Browse Upload Click here to download the Client Code Changes template file |

The Massive Upload is available clicking on ``Trades->Massive Upload'' in the BCS Main Menu.

In this pop-up it's possible to select an .xls, .csv or .xml file to upload into the BCS Clearing system. Clicking on the link "Click here to download...", the user could download a zip file containing a template file for each format (.xls, .csv and .xml) with all the fields empty. A set of templates is available for each function. Only these files are accepted by the system. It is possible to upload just one file at the time (i.e. a file for the International Give-Ups) that contains max 1000 rows. If the total

number of rows in the file exceeds the limit, an error will be shown and the process will be interrupted.

As soon as the Upload button is clicked, the file will be sent to the BCS Server and the pop-up will be closed.

The BCS server performs an automatic parsing in order to collect all the available fields from the file. The following fields are mandatory for the functions described above:

For the International Give-Ups:

- ContractNumber
- ContractDate
- AccountType
- Side
- Quantity
- ReceiverABiCode
- RectifyPosition
- AdditionalInfo

For the Trade Transfers:

- ContractNumber
- ContractDate
- AccountType
- Side
- Quantity
- ReceiverABiCode
- RectifyPosition
- AdditionalInfo

For the Open/Close Changes:

- ContractNumber
- Market
- OpenClose
- ContractDate
- Side

For the Client Code Changes:

- ContractNumber
- Market
- ClientCode
- ContractDate
- Side
- RectifyPosition
- ClientInfo

At the end of the process, a pop-up will be shown, listing all the rows in the file. In case one of the rows of the file is not correct (i.e. in case one of the mandatory field is not specified), the corresponding row will be shown in red in the pop-up. The transaction result column will detail the cause of the error (i.e. "Missing ABICode field").

In the International Give-Ups and in the Trade Transfers pop-up it's possible to enable or disable the "Same Receiver Member" checkbox. Checking this option it will be possible to specify the same receiver for all the rows in the "Receiver member" listboxes. Unchecking the option, it will be possible to specify a different receiver for each row in the "Receiver ABI Code" and "Receiver member" columns of the table.

6EXERCISE / ASSIGNMENTS

This menu allows to exercise the long option positions and verify the assignments received for the short option positions.

The Exercise/Assignments menu is made by the following sub-menus:

- Early Exercise: it allows to access the function of Early Exercise "By Position", i.e. by seeking the option position to exercise within the list of the open positions, or "By Series", i.e. by seeking the option series to exercise within the list of all the option series;
- Expiry Exercise (Exercise By Exception): it allows to access the function of Expiry Exercise (Exercise By Exception) By Positions, i.e. by seeking the expiring option position within the list of the expiring option positions (where are also indicated the automatic exercises proposed by the clearing system), or "By Series", i.e. by seeking the expiring option series within the list of all the expiring option series;
- Exercise Request History: it shows the early exercise requests and the expiry exercises (Exercise By Exception) requests sent by the member to the clearing system;
- Assignments: it shows all the assignments received by the member for its short option positions.

The information for the use of the above mentioned functions are provided below.

6.1Early Exercise (By Positions)

This window lists all the options positions of the member for which is possible to send an Early Exercise Request (long positions). For General Clearing Members, also Non-Clearing Members data are shown. New data are automatically shown as soon as they are processed by the clearing system, without the need for manual refresh of the window. At the same way, any update on a position is automatically shown.

Table columns description:

| Market | Trading Market | | |

6.1.1 Early Exercise Request

The Early Exercise Request allows to send an early exercise request on the specified position to the clearing system.

In order to send an Early Exercise Request, the user should select a position from the Early Exercise (By Positions) window, right click on it and select *Early Exercise Request*.

| 🖾 Exercise request 📃 🔺 | | | |
|------------------------|----------------|---------|-------------|
| Market Id | IDEM - ITALIAN | DERIVAT | TVES MARKET |
| ABI code | 92003 | • | |
| ISIN code | IT0010879333 | | Select Mode |
| Serie name | ENI5F11 | - | Symbol |
| Account type | ⊖н о с | | |
| Sub account | *OMN | - | |
| Quantity | | | |
| Exercise type | Early exercise | • | |
| Additional info | | | |
| | Insert | Cancel | |

The following steps should be performed:

- 1. Insert the number of positions to be early exercised into the *Quantity* field; the quantity field is limited to four digits. In order to early exercise a quantity with more than four digits, the user should send more than one request, to cover the whole amount of positions to exercise;
- 2. Insert a value into the Additional Info field (optional);
- 3. Press the *Insert* button to confirm.

The list of early exercise requests sent can be downloaded through the Exercise/Assignments main menu, in the Exercise Request History sub-menu.

Please notice

An early exercise can be executed also in the Positions List window, which can be reached through the Positions main menu or in the Early Exercise (By Series) window, reachable from the Exercise / Assignments menu.

6.2Early Exercise (By Series)

The Early Exercise (By Series) window allows to send early exercise requests to the clearing system by seeking the option series to exercise within the list of all the option series.

| 🔄 Exercise re | quest | - | _ × |
|-----------------|-------------------|-------------------|------------|
| Market Id | IDEM - ITALIAN DI | ERIVATIVES MARKET | • |
| ABI code | 92003 | - | |

| Account type | онос | | |
| Sub account | | - | |
| Quantity | | | |
| Exercise type | Early exercise | - | |
| Additional info | | | |
| _ | Insert C | ancel | |

The following steps should be performed:

- 1. Select the tradable series of the position to early exercise in the *ISIN Code* or in the *Series Name* field;
- 2. elect *H* or *C* in the Account Type option;
- 3. Select the Sub Account of the position to early exercise in the Sub Account field;
- 4. Insert the number of positions to be early exercised into the *Quantity* field; the quantity field is limited to four digits. In order to early exercise a quantity with more than four digits, the user should send more than one request, to cover the whole amount of positions to exercise;
- 5. Insert a value into the Additional Info field (optional);
- 6. Press the *Insert* button to confirm.

A confirmation message informs the user that the transaction has been successfully committed

Please notice

An early exercise can be executed also in the Position List window, reachable from the Positions item of the main menu or in the Early Exercise (By Position) window, reachable from the Exercise / Assignments menu.

6.3Expiry Exercise (Exercise by Exception) (By Positions)

This window lists all the automatic and non-automatic exercise proposals which could be confirmed or exercised by exception by the member. If the member intends to accept all exercise and non-exercise proposals, it does not need to perform any operations. For General Clearing Members, also Non-Clearing Members data are shown. Any update of the window is automatically shown without the need for manual refresh. Any exercise proposal will be automatically updated in case of Exercise By Exception sent by the member.

6.3.1 Exercise By Exception Request

The Exercise By Exception allows the user to send:

- 1. a request to partially or entirely exercise an Out of the Money option, which would be otherwise, abandoned by the clearing system;
- 2. a request to entirely abandon an In the Money option, which would be otherwise exercised by the clearing system.

In order to send an Exercise By Exception request, the user should select an expiry exercise proposal from the Expiry Exercise (Exercise By Exception) (By Positions) window, right click on it and select *Exercise by Exception*.

| 🗐 Exercise re | quest | | | _ × |
|-----------------|------------------------|-------|---------------|-----|
| Market Id | IDEM - ITALIAN | DERIV | ATIVES MARKET | |
| ABI code | 95000 | - | | |
| ISIN code | П0012265325 | | Select Mode | |
| Serie name | | | Symbol | |

The following steps should be performed:

- 1. Select the tradable series of the position to exercise by exception in the *ISIN Code* or the *Series Name* field;
- 2. Select *H* or *C* in the Account Type option;
- 3. Select the Sub Account of the position to exercise by exception in the *Sub Account* field;
- 4. Insert the number of positions to be exercised by exception into the *Quantity* field; the quantity field is limited to six digits. Every Exercise by Exception sent replaces a previous request already sent on the same ISIN Code / Abi Code / Account Type / Sub Account;
- 5. Insert a value into the Additional Info field (optional);
- 6. Press the *Insert* button to confirm.

A confirmation message informs the user that the transaction has been successfully committed

Please notice

An exercise by exception can be executed also in the Expiry Exercise (Exercise By Exception) (By Positions) window, reachable from the Exercise / Assignments menu.

6.5Exercise Request History

The Exercise Request History window is made by the following tabs:

- Early Exercises Sent: it shows the list of early exercise requests sent to the clearing system by the clearing member (and its NCM's) and allows to access the function of Cancel Early Exercise Request;
- Expiry Exercises: it shows the list of exercises by exception sent to the clearing system by the clearing member (and its NCM's).

6.5.1 Early Exercises Sent

This window lists all the early exercise requests sent by the member. For General Clearing Members, also Non-Clearing Members exercises are shown. The window lists the early exercise requests of the current business date. New exercises are automatically shown as soon as they are managed by the clearing system, without having to manually refresh the window. At the same way, any update on an exercise

| Put/Call | Option Type (Put / Call) |
| Request key | Request Key of the Early Exercise Request assigned by the clearing system |

<u>Cancel Exercise Request</u>: The Cancel Early Exercise Request allows to cancel an early exercise request previously sent to the clearing system.

In order to send a Cancel Early Exercise Request, the user should select an early exercise position from the Early Exercises Sent tab of the Exercise Request History window, right click on it and select *Cancel Early Exercise Request*.

The following steps should be performed:

1. Press the *Ok* button to confirm.

6.5.2 Expiry Exercises

This window lists on the expiration day all the exercise by exception requests sent by the member. For General Clearing Members, also Non-Clearing Members exercises are shown. New exercises are automatically shown as soon as they are managed by the clearing system, without having to manually refresh the window.

This menu allows to access to all the Risk Management functionalities: Trade Limit, Position Limit, Margin Limit and What If.

The Risk Management menu is made by the following windows:

- Trades Limit: it shows the list of trade limits of the clearing member (and its NCM's) and allows to create a new limit or change and delete an existing limit; for each trade limit, an alarm will be shown as soon as a new executed trade fall under the imposed trade limit threshold; this check will be carried out evaluating, for each new executed trades, the notional value for derivatives products or the counter value for stock contracts;
 - for derivatives instruments, the notional value is calculated multiplying the price by the quantity by the Index Point Value or Contract Size (if the instrument is on Index or on Stock); for a future instruments the price variable might refer to the trade price, settlement price or a VWAP price, while for an option instrument the price variable might refer to the premium or the strike price.
 - \circ $\,$ for stock instruments, the counter value is calculated multiplying the price by the quantity.
- Position Limit: it shows the list of position limits of the clearing member (and its NCM's) and allows to create a new limit or change and delete an existing limit; it shows, for each position limit, the limit values of the current business day; as for trade limit, this check is carried out evaluating, for all the trades in place that composes the positions included in the Position Limit, the notional value for derivatives products or the counter value for stock contracts;
- Margin Limit: it shows the list of the existing portfolios of the clearing member (and its NCM's) and, for each portfolio, the margin limit values of the current business day and the portfolio definition; it allows to create a new portfolio (and related margin limit) or change and delete an existing portfolio (and related margin limit);
- What If: it allows to simulate the margin amount that the clearing system will ask to the member in case of a change on a the current open positions.

Please note that the result of the calculation it is not binding for CC&G.

• *Portfolios*: lists all the existing portfolios of the clearing member (and its NCM's) with an associated margin limit. By right clicking on the portfolio, it is possible to change the portfolio and the related margin limit or to delete them. By clicking on the icon next to the Portfolio name, the details of the portfolio and of the related margin limit are shown. In case the risk engine doesn't work properly and the margin limit computation is not possible, the corresponding Portfolio name will be highlighted with a yellow background.

By clicking on the "Add" button on the bottom, it is possible to add a new portfolio with a new associated margin limit through the following window.

| ortfolio Type | O Standard 🔘 Custom | | |

The following steps should be performed:

- 1. Select the Portfolio Type between Standard and Custom;
- 2. Insert the Portfolio Name in the related text box;
- 3. Select the ABI code from the combobox;
- 4. Select the Account Type from the combobox;
- 5. Select the Market from the related combobox;
- Select the list of Members to be added in the new portfolio from the list of the available ones;
- 7. Define the Margin Limit by filling in the related text boxes: Margin Limit Name, Initial Margin value, Limit 1, Limit 2, and Limit 3 values.

• Portfolio Definition: it shows the composition of the selected portfolio.

• *Margin Limits*: it shows, for each portfolio, the timetable of the margin limit values of the current business day and the threshold of the Limit1, Limit2, and Limit3. Every five minutes, a notification with the Margin Limit value is received, and the chart in the Margin Limits table updates accordingly; as soon as a clearing operation that impacts the Margin Limits value is executed, a notification with the new value of the Margin Limits is received, and the chart in the Margin Limits table updates accordingly.

This window is composed by three tables:

- Starting Portfolio: lists the available portfolios that can be used as a starting point for the What If computation. The starting portfolio is to be chosen between an empty one or among the listed ones. By clicking on the "Add" button on the bottom, it is possible to add a new portfolio with a new associated margin limit through the following window.
- Portfolio Definition: it shows the composition of the selected portfolio.
- *Positions Delta List*: it lists the positions to be considered as part of the starting portfolio for the What If computation of the new Margin value. By clicking on the "Add Delta Portfolio" button on the bottom, it is possible to modify the Positions Delta List through the following window.

| Positions Delta L | ist | | | | | | | | | | |

The following steps should be performed:

Share/Derivatives - Custom section

- 1. Select the Market from the related combobox;
- 2. Select the Symbol from the related combobox;
- 3. Select the Product Group from the related combobox;
- 4. Select the Product Type from the related combobox;
- Select the positions to be added in the Positions Delta List by double clicking on them;
- 6. In the Position Delta List table, for each position, select Account Type, Sub Account, Volume, and Long/Short from the related combobox;
- 7. Click the Add button at the bottom of the window;
- 8. Click the Calculate Margin Limit button at the bottom of the previous window to calculate the new margin value.

Bond section

- Select the positions to be added in the Positions Delta List by double clicking on them;
- In the Position Delta List table, for each position, select Market, AbiCode, AccountType, Quantity, Price, Long/Short, TradeType, RepoRate, TermSettlementDate and SpotSettlementDate from the related combo/free text boxes;
- 3. Click the Add button at the bottom of the window;

 Click the Calculate Margin Limit button at the bottom of the previous window to calculate the new margin value.

<u>Bulk Deposit Modify</u>: The user can change the allocation and the subaccount associated to one or more shares deposits. In order to access this function, the user has to right click on the a specified guarantee and select Bulk Deposit Modify.

In order to modify a subaccount the user has to select a new value in the SubAccount field; to modify the allocation just select O/A (American Option),O/ E (European Option) or F(Future); it's possible to perform both these changes simultaneously. Click the OK button to send the modifications to the system. The results will be shown into the columns *Allocation type change result* and *Sub account change result*.

9REPORTS

This window shows the list of clearing reports provided by the clearing system, together with the Order and Trades files provided by the trading system.

9.1Report

This window shows the list of the clearing reports available on a specified date. Some reports are available in a multiple format, so the user can select to download them in TXT, PDF or XML. A General Clearing Member can manage and download also its NCM's reports selecting the corresponding tab.

| тхт | TXT Report availability status and zipped file size | | | |
| ZIP | ZIP Report availability status and zipped file size (Only for RISK file) | | | |
| GCM | GCM Participant Code the report refers to | | | |

Operational steps description:

- 1. Select the Date and press Download button to view available reports for that date.
- 2. For General Clearing Members, more than one tab will appear, allowing to choose the NCM for which you want to download the report.
- 3. Select the row of the desired report and right click on the row. Depending on the availability of the formats, you will be able to open them ("Show Report as") or save them in the local PC ("Save Report as").

Please notice

For Risk file only the "Save report as" functionality is available.

The report window always shows the most recent version of a report, in case more than one update is sent during the same day.

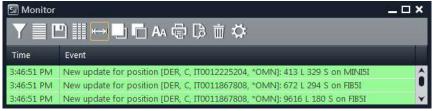

After the selection, the download of the report will start, showing a progress bar that will alert about the remaining and the elapsed time for this action.

The user can abort the download clicking on the *Break* button and then on *Close*.

This menu allows to access the Monitor, the Intraday Margin Calls, the Sop Button, the Clearing Message and the Notifications windows. Monitor

The Monitor windows shows in real time the list of clearing events previously subscribed by the user. This window is automatically opened by the GUI after the login and show any event generated from that moment on related to the member. For General Clearing Members, also Non-Clearing Members events are shown. New events are automatically shown as soon as they are managed by the clearing system, without having to manually refresh the window.

By default, only a subset of clearing events are subscribed for the notification. The user could customize the list of events to be shown in this window by clicking the *Settings* button in the toolbar.

 \square

The *Settings* button allows the user to select which clearing events to be shown in the Monitor window. It's also possible to select the *Always Show on Top* and the *Open at Startup* options. To enable any change, the user should click the *Ok* button.

The *Clear Messages* button allows to clear the Monitor window deleting all the listed events.

Clicking on any event in the Monitor window will open the corresponding window of the GUI where the information of that event is displayed.

It's possible to change the colors of the events by clicking on the *Background* button in the toolbar. It's possible to define a color for every type of clearing event.

Table columns description:

| Time | Timestamp of the reception of the clearing event message | |
|-------|--|--|
| Event | Description of the clearing event | |

10.1 Intraday Margin Call

This window shows the requests of additional intraday margins issued by the clearing system to the participant.

This window will be automatically shown when a new intraday margin call will be required by the clearing system to the clearing member or to one of its NCMs. In this case one tab for each NCM will be shown.

Table columns description:

| Sequence Number | Identifier of the request |
|-------------------|---------------------------|
| Date | Date of the request |
| Account Type | Account Type |
| Initial Margin | Initial Margin |
| Variation Margin | Variation Margin |
| Premium Margin | Premium Margin |
| Net Margin | Net Margin |
| Asset | Guarantees Amount |
| Requested amount | Requested Amount |
| Percent Variation | Percent Variation |
| Margin Call Type | Margin Call Type |

10.2 Stop Button

This window allows a GCM to suspend one of its NCMs in the SOLA Trading System on the selected Market and to inactivate all its active orders on that market. The user should click on the tab of the corresponding market, right click on the row of the NCM he would like to suspend and click "Disable". The new trading status of the NCM will be shown in the Status table. It's possible to re-activate the clearing member right clicking on the corresponding row and selecting "Enable". It is possible to suspend the NCM on a selected market only once per day. The Stop Button window can be accessed only by GCMs. Currently the Stop Button functionality is active only on IDEM, IDEX and AGREX markets.

Table columns description:

| ABI Code | Clearing Member Identification Code for the Clearing system | | | | |
|-------------|---|--|--|--|--|
| Description | Member name | | | | |
| Mnemonic | Alphanumeric code | | | | |
| Market | rading Market | | | | |
| Туре | Member type (Individual Clearing member, Non-Clearing member, General Clearing member) | | | | |
| Status | Trading Status of the member Active = the clearing member is active on the selected market Inactive = the clearing member is not active on the selected market Unknown = the trading state of the clearing member is not available | | | | |
| | Missing Link = the stop button functionality is not active for the clearing member on the selected market (i.e. for MTA, MTS, MOT, ICSD markets) | | | | |

10.3 Clearing Message

The Clearing Message window shows in real time the list of clearing messages sent by CC&G. This pop-up is automatically opened when a new message is received. New events are automatically shown as soon as they are managed by the clearing system, without having to manually refresh the window.

| Clearing Messages | _ 🗆 🗙 |

10.4 Notifications

This window grants clearing members to receive notifications on their clearing activities via mail. In particular it allows to receive an email when:

- An intraday margin call is raised. The email is triggered each times a NotifySubIntradayMarginCallsSent event occurs
- When the member is assigned for at least on one product. The email is triggered one time a NotifySubAssignmentsSent event occurs
- CC&G disseminate a clearing message. The email is triggered each times a NotifyClearingMessages event occurs
- When a monitored portfolio exceeds its limit thresholds. The email is triggered each time the limit thresholds is overcame.

The mail subject is the same for all the mails: "CC&G BCS Notifications". The notification window is composed by two sections tables:

- *Emails Config*: lists the current emails set, right clicking on the email box is possible to insert, change or delete the email address. New values will be stored after the pressure of the Save button.
- Notify Config: allow to set up a notification, right clicking on the drop down menu is possible to subscribe an event. Into the table is possible to link the emails contained into the Emails Config table to the events. The enable flag allows to enable or disable the subscription without deleting the row. Left clicking on the row a delete button appears, thanks to it is possible to delete the row. New rules are in place only after the pressure of the Save button.

| Notifications | | | | | | _ 🗆 × |
|------------------------|-----------------|---------------|-------------------|-----------------|-----------------|---------|
| Emails Config | | | | | | |
| Email1 | | | test@lseg.com | | | |

Summarizing to set a new notification the following steps should be performed:

- 1. Insert at least one email address into the mail box;
- 2. Press the *Save* button;
- 3. Select an event to subscribe;
- 4. Insert at least one email into the *To* column (*Limit1, Limit2* and *Limit3* if a Margin Alarm);
- 5. Enable the subscription;
- 6. Press the *Save* button.

Note: emails are generated automatically, don't reply to it.

11 APPENDIX A – REGULAR EXPRESSIONS

A regular expression is a string (sequence of characters) built with a proper syntax, which express characteristics shared by a set of strings.

Assume you intend to use a notation to indicate all the strings which begin by 'a' and end by 'o': we will write 'a*o' to indicate all these strings which share the characteristic to start by 'a' and end by 'o' The following strings belong to the set mentioned above 'ao', 'ago', 'also' but not 'aristotelis' or 'psycho'. The character '*' used into the regular expression indicate whatever sequence of characters.

Let's see the syntax to be used for regular expressions and the meaning of each abbreviation:

| x | "x" character | | | | |
|--------|---|--|--|--|--|
| 0 | Finds a single character into the brackets. For instance,[abc] looks for an 'a', a 'b' or a 'c'.[a-z] is an interval and finds every small character of the alphabet. Mixed cases can occur: [abcq-z] looks for b, c, q, r, s, t, u, v, w, x, y, z, just as [a-cq-z]. | | | | |
| [^] | Finds every small character not included into the brackets. For instance, [^abc] finds all the characters different than "a", "b", o "c". [^az] looks for every character different than small letter | | | | |
| ۸ | Indicates the beginning of the string | | | | |
| \$ | Indicates the end of the string | | | | |
| 0 | Define a sub expression | | | | |
| Х? | X which recurs 0 or one time | | | | |
| Х* | X which recurs 0 or several times | | | | |
| Х+ | X Which recurs at least once | | | | |
| X{n} | X which recurs twice exactly | | | | |
| X{n,} | X which recurs at least n times | | | | |
| X{n,m} | X which recurs at least n times and no more than m times | | | | |
| XY | X followed by Y | | | | |
| X Y | X or Y | | | | |

X and Y are regular expressions

Some examples follows:

 $[ab]^* = all$ the strings which start by a or b

 $[^a-c]^*a$ = all the strings which start by "a", "b" e "c" but which end by "a"

 $s{2}^* = all$ the strings which have two s'' at any point of the sequence

cu(t|p) = strings which end by "cut" and "cup"
