The High-Speed Vendor Feed (HSVF) is comprised of trades, quotes, market depth, strategies, bulletins, summaries and other statistics.

This HSVF market data specification defines the communications interface and message formats for the high-speed transmission which broadcasts real-time trading and statistical information from the Exchange derivatives platform.

1.2 Readership

The target audience for this publication is the business or Information Technology level of an organisation interested in the functional design of the Exchange derivatives platform.

2 Overview

The High-Speed Vendor Feed (HSVF) market data feed uses TCP/IP broadcast interface. Each message type is fixed in format and messages are non-blocked (i.e. the Exchange does not wait for an acknowledgement before sending the following message) re-transmission of any data is available.

Starting with SOLA 14, market data is also available via UPD (Multicast) stream. HSVF messages disseminated via the two new multicast channels (primary and secondary, that are A and B feed) are the same already available in the TCP protocol. The recovery of messages is guaranteed via the current TCP (unicast) channel.

HSVF messages consist of a standard message header followed by the message body which varies in format according to the message type.

2.1 Transmission format

Each message is framed by an STX and an ETX character. The format used is:

S T X	MESSAGE HEADER	MESSAGE	E T X
-------------	----------------	---------	-------------

STX and ETX indicate the beginning and the end of the record being transmitted.

2.2 Message Header

The standard message header attached to all messages has the following format:

Field Name	L=23	T	Definition / Validation Rules
Time	12	N	HHMMSSmmmmuuu Refer to Field Description "Time stamp"

Sequence Number	9	N	Each message is assigned a sequence number starting at '00000001' every day and incremented by 1 for each message sent. The sequence numbers will range from 00000001 to 99999999 (decimal, ASCII) with wrap around. <i>Note: Retransmitted messages will contain the original sequence numbers.</i>
Message Type	2	X	Identifies the type of message being sent. Format is left- aligned, right 'blank' filled (if necessary).

2.3 TCP Transmission capability

The following table describes Transmission Capability. For formatting details on examples shown, refer to the Message Type RS – Connection Message – Min. 32 / Max. 6026 bytes.

Type of retransmission	Description
Normal Connection (i.e. Start of Day)	<ol style="list-style-type: none"> 1) Participant connects to specified port 2) Participant sends RS message type (Not applicable for UDP) ex. 00000001RS0000000000YNYNYE8000 3) The Exchange sends data to Participant with: <ul style="list-style-type: none"> Starting sequence number 00000001 Regular market messages on Options, not Futures Market depth messages for all Trading Instruments Regular market messages and Strategies for all Trading Instruments Regular market messages with Summaries GAP Control: Y (will receive GAP messages) Protocol version E8 All options classes
RETRANSMISSION -A- (REQUESTING TO RECEIVE FROM BEGINNING OF THE DAY)	<ol style="list-style-type: none"> 1) Participant connects to specified port 2) Participant sends RS message type (Not applicable for UDP) ex. 00000001RS0000000000YNYNYE8000 3) The Exchange resends all messages disseminated so far through outthroughout the day
RETRANSMISSION -B- (REQUESTING THE NEXT MESSAGE IN LINE)	<ol style="list-style-type: none"> 1) Participant connects to specified port 2) Participant sends RS message type (Not applicable for UDP) ex. 00000001RS9999999999YNYNYE8000 3) The Exchange sends the next message to Participant

RETRANSMISSION -C- (FROM A SPECIFIC SEQUENCE NUMBER)	1) Participant connects, if disconnected to specified port 2) Participant sends RS message type (Not applicable for UDP) ex. 000000001RS 0000013247 YNYNYE8000 3) The Exchange sends all messages with sequence numbers greater than 13247 <i>Note: If the Exchange's sequence number is lower than participant's, transmission will begin with the next message</i>
DISCONNECTION	1) Participant disconnects from port

Notes:

- 1) For a retransmission (type 'A' or 'C'), participants should keep the same parameters (Type of market data / GAP Control / Option classes requested).
- 2) Participants are required to reconnect every day. If they do not disconnect, their connection is terminated by the Exchange at the end of the day.
- 3) Connection messages (RS) and Align End (VE) are not applicable to the Multicast but only to the TCP

2.4 UDP Transmission capability

Type of transmission	Description
Data Content	<ol style="list-style-type: none"> 1. Instruments: <ul style="list-style-type: none"> • all Equity Options, Futures and Strategies are disseminated • equivalent to TCP subscription with RS message filled as follows: <ul style="list-style-type: none"> • Equity Options = Y • Futures = Y • Strategies = Y 2. Information Disseminated: <ul style="list-style-type: none"> • best 5 levels of orderbook (with implied prices), Trades, Post Trade (extended Trade Message) and Market Summary will be disseminated • equivalent to TCP subscription with RS message filled as follows: <ul style="list-style-type: none"> • Market Depth = I • Market Summaries = N • Post Trade = Y

London

Participant Subscription to UDP stream (Channel A or Channel B)	<p>1) Participant subscribes to the multicast Channels (A and B feeds) and receive messages disseminated in real-time.</p> <p>Note: being UDP, no connection message is necessary</p> <p>2) The Exchange sends data via the UDP stream <u>before</u> sending them via TCP</p> <p>3) It's not possible to select a subset of messages to be received so all messages related to:</p> <ul style="list-style-type: none"> - Market Reference Data (Options, Futures and Strategies) - Regular market messages on Options, Futures and strategies - Market depth messages for all tradable Instruments - Post Trade messages for all tradable instruments - Trade messages for all tradable instruments - Regular market messages with Summaries are broadcasted.
Participant Subscription to UDP stream (Channel A and Channel B) for resilience purposes	<p>1) Participant subscribes to UDP stream on both Channel A and Channel B</p> <p>2) Same data will be received from both Channels</p> <p>3) If Channel A becomes unavailable, then Participant continues to receive data at every market event on Feed B</p> <p>4) A gap in message sequence number is verified on Channel A, Participant can retrieve the messages from Feed B</p>
Replay/Recovery (message re-transmission)	<p>1) Participant subscribes to the UDP stream</p> <p>2) There's a gap in the messages received via the UDP channels (or Feeds become unavailable)</p> <p>3) Participant connects to the unicast service specifying the sequence number in the login message (RS)</p> <p>4) Missing messages are delivered to the Participant via TCP</p>

1) *In case the user specifies upon TCP connection (RS message) a subset of messages, the messages disseminated won't be the same as received in the UDP*

i.e: In case the user subscribes to receive the Best (instead of the Market Depth), any time there's first level book update, s/he will receive an F/FF/FS message while via UDP s/he will receive the H/HF/HS

18 Message processing

18.1 Summary messages

Summary messages are sent:

- At the beginning of the day to define the instruments traded on that day
- After a trade cancellation
- At the end of the day with relevant data such as the Open/High/Low/Last/Volume

- During the day if a new instrument is added
- During the day if a Settlement Price or Open Interest event are sent by the Clearing System

18.2 Instruments keys and the book updates

On HSVF the Instruments keys and the book updates are disseminated:

- J(i) messages are disseminated at the beginning of the trading day for all tradable series.
- J and JF messages are disseminated any time the instrument Min/Max thresholds are updated
- J (for Options), JF (for Futures) and JS (for Strategies) messages are disseminated at the start of day for all the instrument that are **not yet expired**
- For options the H message is disseminated for all the instrument that are **tradable on the given date**
- For future the HF message is disseminated for all the instrument that are **tradable on the given date**

18.3 Strategies' processing

Messages to use:

- JS (Strategy Instrument Keys)
- J/JF (Leg Instrument key messages for options, and futures)
- NS (Strategy Summary Messages)

Process:

1. Collect all JS Messages broadcasted in the HSVF and maintain all of their Symbols for future linking to the Symbols in the NS message which will be disseminated after the HSVF JS message. Note JS messages can be broadcasted in HSVF at any time during the normal trading day for newly created User Requested Flexible Combinations.
2. For each J/JF message record, create and maintain a table of Leg "Symbol – HSVF External Code" couplings.
3. For each leg received in each NS messages:
 - Find the HSVF External Code which is now coupled to the leg Symbol created in step 1
 - Generate the leg description by joining the:
 - Leg Ratio Sign
 - Leg Ratio Integer
 - Leg HSVF External Code
 - Remove all the insignificant "0" and spaces
4. Generate the strategy description by joining the legs description in their respective order in the NS message and you remove all the insignificant spaces.

18.4 Group status change

For each group the status change is disseminated according the following schedule:

- At 8:00 the groups status change Intervention Before Opening is disseminated.
- At 8:30 the groups status change Preopening is disseminated (for FIB and MINI only).
- At 9:00 the groups status changes Opening and Continuous Trading are disseminated (all groups except for AGREX market that opens at 14:30).

18.5 Off-Tick Prices Implied level

Implied price level B is disseminated to show when a price “better” than the best possible full tick price is available. This implied level shown in Market Depth messages have the following characteristics:

- Level of Market Depth = B
- Price = best possible full tick price
- Quantity = Aggregated volume at the “best price” even when that “best price” has not been disseminated

Market Depth Messages dissemination:

Scenario	H<i> message dissemination	
	Number of Level disseminated	Level of Market Depth
1. Bid/Ask Prices on Implied level A	1	A
2. Bid/Ask Prices on Implied level B	1	B
3. Bid Price on Implied level A and Ask Price on Implied level B or vice versa	2	A and B
4. An incoming order price change the Implied level populated E.g. Bid Price on implied A, an incoming order change the implied level to B	1	A or B E.g. A empty and B
5. Bid/Ask Prices on Implied Level B are cancelled	2	A and B empty
