Functioning of the auction for the Central Order Book auction and phase change rule

2030

Call Phase

Each auction shall begin with a call phase in which orders are automatically recorded without giving rise to transactions. During such call phase, Intermediaries may enter new orders as well as modify or cancel existing orders. An indicative price, representing the price which the system matcher would determine on the basis of the given Central Order Book situation, and the executable volume shall be displayed and updated continuously as the Central Order Book situation evolves.

The call phase shall end at a time within an interval within the last 30 seconds of the same phase.

Price determination phase

Following completion of the call phase, the system shall seek to determine a price so as to produce the maximum executable volume as per Article 203.2. During such price determination phase, no new orders may be entered, and existing orders may not be modified or cancelled.

If, at the end of the call phase, the difference between the indicative uncrossing price and the static or dynamic reference prices exceeds the maximum price variations set in the Guide to Parameters, the reservation phase shall be started for a period established by Borsa Italiana in the Guidelines.

The functioning of the auctions is further described in Section 1.3 of

the Trading Manual.

In the pre-auction phases, the indicative uncrossing price shall be computed and updated in real time. It shall be determined as follows:

- 2030.1** the indicative uncrossing price shall be the price at which the largest quantity of securities can be traded;
- 2030.2** where the quantity referred to in article 2030.1 can be traded at more than one price, the indicative uncrossing price shall be equal to the one which produces the smallest quantity that cannot be traded with reference to the buy and sell orders having prices equal to or better than the price in question;
- 2030.3** where for more than one price the quantity of securities that cannot be traded referred to in article 2030.2 is also the same, the indicative uncrossing price shall be equal to the highest price if the greater pressure is on the buy side or with the lowest price if the greater pressure is on the sell side;
- 2030.4** where applying article 2030.3 the market pressure on the buy side is shall be equal to that on the sell side, the indicative uncrossing price shall be equal to the price closest to the static price, referred to in article 2080, where the static price is out of the range individuated by the two prices determined applying the previous article 2030.3 or is equal to the static price itself where it is included between the two prices determined applying the previous article 2030.3;
- 2030.5** where no static price exists, the indicative uncrossing price shall be equal to the lowest price among those referred to in the previous subparagraphs;

2031 The indicative uncrossing price shall be equal to the dynamic price, referred to in article 2081 where only buy and sell orders without a limit price are present.

2032 The pre-auction phase shall end at a time within the last minute of such phase.

G 2033 The last indicative uncrossing price shall be considered valid and adopted as the auction price for the conclusion of contracts if it differs from the static price by less than the maximum percentage variation established by **Borsa Italiana** and provided the indicative auction price and corresponding volumes remained stable in a predefined period (final validation period). This check is repeated for a limited number of times within the time referred to in article 2032. The final validation period duration and the stability criteria of indicative auction prices and corresponding volumes are established in the Guide to the Parameters.

G 2034 If the difference between the indicative uncrossing price and the static price exceeds the maximum percentage variation referred to in article 2033, the volatility auction phase shall be started for a period established in the guidance Sec. 204.

2035 The conclusion of contracts referred to in article 2033 shall be the result of the automatic matching of buy orders with prices equal to or higher than the auction price with sell orders with prices equal to or lower than such price in accordance with the price and time priorities of the individual orders and until the quantities available are exhausted.

2036 At the end of the opening auction or of the volatility auction, limit orders which are partly or wholly unfilled shall be automatically transferred to continuous trading as limit orders and with the price and time priority of the original order. Unfilled market orders shall be automatically cancelled at the

end of the auction. The partially or wholly unfilled market to limit orders shall be transferred to the continuous trading phase as orders with limit price equal to the auction price or in the absence of the latter at the static price and with the time priority of the original order.

2037

At the end of the closing auction, limit orders which are partly or wholly unfilled shall be automatically transferred to opening pre-auction phase of the following day with the price and time priority of the original order, if the validity parameters specified for the order allow it. Unfilled market orders shall be automatically cancelled at the end of the auction. Partially or wholly unfilled market to limit orders, where the validity parameters specified in the order allow it, are transferred to the opening pre-auction phase of the following day with a limit price equal to the auction price, or in the absence of the latter to the static price, and with the time priority of the original order.

Continuous trading

2040

Trading shall take place in the continuous trading phase, in accordance with Section 1 of the Trading Manual.

Specifically, during the continuous trading phase, each new order is immediately matched to the orders of the opposite sign present in the order book. Each unexecuted portion of the order is added to the order book for the purpose of executing it.

During continuous trading, contracts shall be concluded, up to the quantities available, through the automatic matching of orders of the opposite sign displayed on the book and ranked according to the criteria referred to in Article 2025, as follows:

2040.1

the entry of a buy limit order shall result in its being matched with one or more sell orders with a price lower than or equal to that of the order entered; conversely, the entry of a sell limit order shall result in its being matched with one or more buy orders with a price higher than or equal to that of the order entered;

2040.2

the entry of a buy market order shall result in its being matched with one or more sell orders with the most advantageous prices on the book at the moment the market order is entered until the quantities available are exhausted; conversely, the entry of a sell market order shall result in its being matched with one or more buy orders with the most advantageous prices on the book at the moment the market order is entered until the quantities available are exhausted. Market orders may be entered only where there is at least one limit order of the opposite sign on the book.

Trading-at-last

2041

A short period shall be provided at the close of a trading day during which orders can be entered for execution at the last traded price.

Closing phase

2041

For each contract concluded via automatic matching in accordance with article 2040, the price shall be equal to that of the order having higher time priority.

2042

The partial execution of a limit order shall give rise to the creation of an order for the unfilled quantity that shall remain on the book with the price and time priority of the original order.

2043

Orders that are wholly or partly unfilled at the end of continuous trading shall be automatically transferred to the closing pre-auction phase with the price and time priority in force at the end of continuous trading.

G	2044	Where, during the continuous trading of a security, the price of a contract that is being concluded exceeds one of the price variation limits referred to in the guidance, the continuous trading of that security shall be automatically suspended and a volatility auction phase begun, which shall be carried out as provided in article 2030 and following.
