2. Pursuant to Article 6010 of the **Rules**, the trading parameters referred to in paragraph 1 may be altered or temporarily deactivated.

B - Limits to the quantity and countervalue of orders

1. The maximum quantity and countervalue of **Sedex financial instruments** in an order are set out in the following table:

Maximum quantity of orders and negotiated transactions (number of pieces)	Maximum countervalue of orders (1)	Maximum countervalue of negotiated transactions (1)
50,000,000	EUR 25,000,000	EUR 50,000,000

(1) For instruments in currencies other than EUR, the maximum countervalue is determined on the basis of the trading currency and periodically updated on the basis of the exchange rate

2. For the iceberg orders referred to in Article 2023 of the **Rules**:

- the minimum countervalue of the order shall be equal to EUR 20,000;
- the minimum countervalue of the peak size shall be equal to EUR 10,000.

PART 1

3. For instruments in currencies other than EUR, the minimum countervalue referred to in points a) and b) is determined on the basis of the denomination currency and periodically updated on the basis of the exchange rate.

C - Deviation limits for negotiated transactions

Pursuant to Article 2050 of the **Rules**, negotiated transactions may be placed during continuous order driven trading with a countervalue of more than EUR 60,000 and a price within 10% respect to the best prices in the orderbook.

D - Obligations of specialists and of MiFID2 market makers

1. **Specialists** are required to place orders, starting from the penultimate minute of the pre-trading phase, for which the minimum quantity of each order and the maximum spread shall be determined as follows:

- a) Minimum quantity of the orders, at least equal to a minimum countervalue of:

	<i>Plain Vanilla Covered Warrants Leverage Certificates – Class B Investment Certificates – Class A</i>	<i>Structured/Exotic Covered Warrants Leverage Certificates – Class A Investment Certificates – Class B</i>
<i>EUR</i>	<i>2,500</i>	<i>5,000</i>

<i>300.0001 – 3,000</i>	7.5%	10%
<i>More than 3,000</i>	3.5%	5%

In general, the spreads indicated in column 1 shall apply.

The spreads indicated in column 2 shall apply until 15:30 hours for instruments whose underlyings are listed on American markets and for other instruments when the reference market of the underlying is closed. **Borsa Italiana** communicates the maximum spread requirements applicable to each financial instrument on its website.

- Borsa Italiana** may adjust the **quotation** obligations in every circumstance that requires technical interventions including changes in market conditions.
- Borsa Italiana**, taking into account the characteristics of the instrument, reserves the right to establish different maximum price differentials from those indicated in the tables in paragraphs 1 and 2, providing communication of this by means of Notice.

PART 1

5. In stressed market conditions, specialists and MiFID2 market makers which have submitted a request pursuant to guidance Sec. 402.3 point b), are required to quote half of the quantities indicated in the paragraphs above, with doubled spreads.

E - Stressed market conditions

1. Pursuant to Sec. 600 of the Rules, stressed market conditions on the financial instruments traded on the SeDeX market occur in the case of the following conditions:

Instruments on shares traded on the MTA market	During the volatility auction phase of the underlying until 5 minutes after the redemption of the continuous phase; in cases where stressed market conditions on the underlying have been declared
Instruments on Italian stock indexes	In cases where stressed market conditions on index derivatives traded on the IDEM market have been declared

2. Pursuant to Sec. 600.2 of the Rules, Borsa Italiana may declare, with notification to the intermediaries, that the market is incurring stress conditions on a SeDeX financial instrument when the following conditions apply at the same time:
- Variation of the average price of the last 10 minutes exceeding an absolute value of $3*Y\%$ [where Y represents the price variation limit indicated in point b of section A] in respect to the reference price and
 - Traded countervalue > EUR 25,000

8 - ATFUND MARKET

A - Limits to the quantity and countervalue of orders

1. The maximum quantity and countervalue of financial instruments in an order are set out in the following table:

	Maximum quantity of orders	Maximum countervalue of orders (EUR)
Open-end CIUs	50*EMS	50,000,000

2. Borsa Italiana, at least in January, shall calculate and publish on its website the quantity, defined as number of financial instruments, with reference to each instrument (EMS – Exchange Market Size).
3. For newly admitted instruments, the EMS shall be given in the Notice establishing

PART 1

the date of the start of trading.

9 - EXTRAMOT MARKET/RULES OF THE EXTRAMOT PRO3 SEGMENT

A - Price variation limits

1. For the purposes of the automatic control of trading, the following types of price variation limits have been established:

ExtraMOT Market:

<i>Class of residual life</i>	<i>Price variation limit for orders with respect to the static price</i>	<i>Price variation limit for contracts with respect to the static price</i>	<i>Price variation limit for contracts with respect to the dynamic price</i>
<i>0 – 180 days (6 months)</i>	<i>± 5%</i>	<i>2%</i>	<i>± 1.25%</i>
<i>181 - 365 days (1 year)</i>	<i>± 10%</i>	<i>± 2.5%</i>	<i>± 1.5%</i>
<i>366 – 730 days (2 years)</i>	<i>± 10%</i>	<i>± 3%</i>	<i>± 2%</i>
<i>731 – 1095 days (3 years)</i>	<i>± 10%</i>	<i>± 3%</i>	<i>± 2.5%</i>
<i>1096 – 1825 days (5 years)</i>	<i>± 15%</i>	<i>± 3.5%</i>	<i>± 2.75%</i>
<i>1826 – 2556 days (7 years)</i>	<i>± 15%</i>	<i>± 3.5%</i>	<i>± 3%</i>
<i>2557 – 3650 (10 years)</i>	<i>± 15%</i>	<i>± 5%</i>	<i>± 3.25%</i>
<i>3651 – 5475 (15 years)</i>	<i>± 15%</i>	<i>± 5%</i>	<i>± 3.5%</i>
<i>5476 and more</i>	<i>20%</i>	<i>± 5%</i>	<i>± 3.5%</i>

PART 1

ExtraMOT Pro3 Segment:

<i>Price variation limit for orders with respect to the static price</i>	<i>Price variation limit for contracts with respect to the static price</i>	<i>Price variation limit for contracts with respect to the dynamic price</i>
± 30%	± 5%	± 2.5%

1. Pursuant to Article 6010 of the **Rules**, the trading parameters referred to in paragraph 1 above may be altered or temporarily deactivated.

B - Limits to the quantity and countervalue of orders

1. The maximum quantity and countervalue of the financial instruments in an order, as referred to in Article 2027 of the **Rules**, are set out in the following table:

Maximum quantity of orders and negotiated transactions	Maximum number that may be entered at the auction price	Maximum countervalue of orders and negotiated transactions	Maximum quantity of RFQs	Maximum countervalue of RFQs
500 * EMS	500*EMS	15,000,000	6000*EMS	150,000,000

2. **Borsa Italiana** shall publish on its website the quantity, defined as number of financial instruments, for each instrument (EMS – Exchange Market Size), as well as any changes to it.
3. For the iceberg orders referred to in Article 2023 point a) of the **Rules**:
 - a. the minimum countervalue of the order shall be equal to EUR 20,000;
 - b. the minimum countervalue of the peak size shall be equal to EUR 10,000.

C.1 - Deviation limits for negotiated transactions

For **larger-sized negotiated transactions**, as referred to in Article 2050, point b), of the **Rules**, the price falls within the following deviation percentages with regard to the best prices in the trading book:

Limit of 0.75 per cent for Government Securities;
Limit of 1.5 per cent for other debt securities.

C.2 - RFQ

PART 1

Contracts may be concluded on the basis of RFQ orders that have the following characteristics:

- a. the price falls within the following deviation percentages with respect to the best prices in the trading book or, in the absence of buy and sell orders, with respect to the dynamic price:

	%
Italian and foreign Government Securities	1
Other debt securities	2

- b. the size of the contract is at least:

	EUR
Italian and foreign Government Securities	500,000
Other debt securities	200,000

RFQs entered in a non-anonymous form can be addressed to a maximum of 8 intermediaries authorised to respond. In such cases, the intermediaries authorised to respond are selected by the requesting **intermediary**.

5476 and more	3.50%	6.00%	8.00%

The maximum differential of the bid prices (spread) is calculated as the ratio between the difference of the sell price and the buy price to half their sum.

- Borsa Italiana may adjust the obligations referred to in the point above, in the case of amendments to the minimum tradable lots and any other circumstance that requires technical interventions including changes in market conditions.
- In stressed market conditions, specialists and MiFID2 market makers are required to quote half of the quantities indicated in paragraphs 1 and 2, with doubled spreads.

E - Stressed market conditions

- A traded financial instrument is subject to stressed market conditions in the 5 minutes which follow the restart of the trading activity after the interruption for excess volatility.
- Borsa Italiana, with notice to the intermediaries, may declare stressed market conditions where the price and volume variations in a given timeframe on single

PART 1

FOR MARKETS OTHER THAN IDEM (ANTI-SPOOFING)

Pursuant to article 4.3.3, paragraph 4, of the Rules, article 2033 of the Rules of AIM Italia/Alternative Capital Market and article 2033 of the Rules of ExtraMOT, theoretical auction prices are validated by verifying theoretical auction prices and auction volumes over a pre-defined period (the validation period). This verification is reiterated a limited number of times during the final minute of the auction phase.

The test is applied to all types of auctions (opening, closing and volatility).

The following is a list of the parameters, defined on a general basis, and the criteria considered when verifying the stability of theoretical prices and auction volumes:

Model parameters and variables:

Description of the parameter/variable		Parameter/variable	Default value
Moment of observation of last theoretical price	second during the final minute of the auction phase, relevant to determining the auction price and the consequent closure of the auction phase	r	-
Validation period (look-back period)	time period for conducting the stability test immediately prior to r	n (seconds)	5
Test reiteration period	if the previous stability test has yielded a positive outcome, time period in which the stress test is reiterated and to the end of which, in the event of a negative outcome, the end of	m (seconds)	8

PART 1

	the auction phase is postponed		
Maximum number of test reiterations	maximum number of times that the stability test may be performed, by the end of the final minute of the auction phase	q	4
Weighted standard deviation of theoretical auction prices		$s1$	-
Weighted standard deviation of auction volumes		$s2$	-
Maximum allowed value of $s1$		$h1$	1%(1)
Maximum allowed value of $s2$		$h2$	50%(1)

(1) The values may vary on the basis of the specific trading characteristics of the segments or classes of financial instruments.

Validation criteria

1. the stability test for theoretical prices and auction volumes is performed by verifying observance of the variation limits for the final theoretical auction price determined;
2. if the variation limits for the theoretical auction price have been observed, the stability test is performed on the theoretical prices and auction volumes in interval n . To this end, the standard deviations of the theoretical prices and auction volumes ($s1$ and $s2$) observed in interval n are calculated. When calculating $s1$ and $s2$, Borsa Italiana takes account of the length of time between the moments in which the theoretical prices/auction volumes are observed and the end of the interval of reference (the weight assigned is inversely proportional to the length of time between the moment of observation and $[r+m*i]$, where "i" refers to the number of reiterations);
3. $s1$ and $s2$ are compared with the respective maximum limits $h1$ and $h2$ defined on a general basis by Borsa Italiana as follows:

PART 1

If... and...	$s_2 \leq h_2$	$s_2 > h_2$
$s_1 \leq h_1$	The outcome of the test is negative and the theoretical auction price is considered valid.	The outcome of the test is negative and the theoretical auction price is considered valid.
$s_1 > h_1$	The test has identified a possible spoofing attempt. Accordingly, the test is reiterated, save for point 4.	The test has identified a possible spoofing attempt. The test is reiterated, save for point 4.

4. if the outcome of the test is positive, the random moment r is postponed and additional stability tests are performed up to a maximum of q times, unless the time remaining until the end of the auction phase is less than m .

If the total number of reiterations is equal to q or the time remaining until the end of the auction phase is less than m and the outcome of the test is positive, the theoretical auction price most recently observed is considered valid for the purpose of determining the auction price.

The values of the parameters set out in the foregoing table are determined by Borsa Italiana on a general basis. Where so provided, the parameters are set on the basis of the specific trading characteristics of the segments or classes of financial instruments.

PART 2

TECHNICAL LIMITS FOR THE ORDER ENTRY AND LINKUPS FOR SPECIALISTS AND OTR

Pursuant to article 3.3.2, paragraph 3 of the Rules, article 1451 of the Rules of Borsa Italiana Equity MTF Market, article 1451 of the Rules of ExtraMOT, article 1451 of the Rules of AIM Italia, of article 1451 of the ATFund market and article 1451 of the Rules of Sedex, the following technical limits for the order entry apply depending on the chosen configuration for the access to the market, as indicated hereinafter:

1 - Markets operating on the MillenniumIT Trading Platform

Comp ID ³	Transactions per second ("tps")
CompID Base	25 tps
CompID Supervisor Base	10 tps
CompID Standard	50 tps

2 - Markets operating on the SOLA Trading Platform

Access modality	Transaction per seconds (“tps”)
Standard Access	30 tps
Advanced Access	90 tps
PTP Access	150 tps
Market Making Access - Basic Access	Based on the number of instruments ⁵ for which the market makers undertake quoting obligations. Market makers are given a number of Bulk Quotes per second (each allowing entering of 100 “single quotes”) equal to the number of instruments for which the specialist has undertaken quoting obligations (at least 4).
Market Making – Additional access (through Bulk Quotes)	4 Bulk quotes per second (each allowing entering of 100 “single quotes”)

⁵ “Instrument” shall mean a contract traded on the IDEM market with a given underlying (e.g. stock option on X share), style (American or European) and settlement modality (offset or material delivery). For example, a market maker that undertakes quoting obligations on 10 different underlying shares, with American style and material delivery, is given 10 Bulk Quotes per second, equal to maximum 1,000 “single quotes”. A “single quote” relates to a single series (ISIN) and only includes a buy or sell option.

PART 2

B. ORDER TO TRADE RATIO

Pursuant art. 3.3.2, paragraph 2 of the Rules, art. 1451 of Borsa Italiana Equity MTF market Rules, art. 1451 of ExtraMOT Rules, art. 1451 of AIM Italia and art. 1451 of Sedex Rules, in the following is indicated the ratio between non-executed orders and trades sent by every operator to the market (in the following also “OTR”) defined both in terms of volume as well as in terms of numbers. The rules for the calculation of OTR indexes are individuated pursuant the guidelines provided in Annex I of CDR 566/2017.

B.1 CALCULATION METHODOLOGY

The OTR, both in terms of volumes and numbers, is calculated daily for (i) every instruments (i.e. ISIN code), (ii) every market participant, (iii) trading venue where the instrument is traded and (iv) separately for the order streams transmitted by a participant to the trading venue, to whom he is bound by a market making agreement.
